The National Center for Education Statistics (NCES) is the primary federal entity for collecting, analyzing, and reporting data related to education in the United States and other nations. It fulfills a congressional mandate to collect, collate, analyze, and report full and complete statistics on the condition of education in the United States; conduct and publish reports and specialized analyses of the meaning and significance of such statistics; assist state and local education agencies in improving their statistical systems; and review and report on education activities in foreign countries.

NCES activities are designed to address high priority education data needs; provide consistent, reliable, complete, and accurate indicators of education status and trends; and report timely, useful, and high quality data to the U.S. Department of Education, the Congress, the states, other education policymakers, practitioners, data users, and the general public.

We strive to make our products available in a variety of formats and in language that is appropriate to a variety of audiences. You, as our customer, are the best judge of our success in communicating information effectively. If you have any comments or suggestions about this or any other NCES product or report, we would like to hear from you. Please direct your comments to:

I. Introduction

A. Introduction to the expanded data files

In October, 2004 NCES released two files for researchers, the Longitudinal Fiscal-Nonfiscal (FNF) and Longitudinal Unified Fiscal-Nonfiscal (UFNF) files. These two files contained school district finance data for the years 1989–90 through 1999–2000. These data included general categories of revenues and expenditures as well as enrollment data. Values were imputed for missing and erroneous data. In the unified file, data for elementary school districts were aggregated with data for their corresponding secondary school districts to create ‘pseudo-unified’ school districts that are financially comparable with unified school districts.

This document describes the release of two updated and more detailed data files, the Longitudinal Fiscal-Nonfiscal Detail (FNFD) and Longitudinal Unified Fiscal-Nonfiscal Detail (UFNFD) data files. These files include more detailed revenue and expenditure items as well as two additional years of data (fiscal years 2000–01 and 2001–02). The same imputation process was followed in creating this expanded version as was followed in the previous release. The additional fields in this file are

- district location data, including street address;
- detail items of the composition of federal revenues;
- detail items of the composition state revenues;
- expenditures for all categories of support services rather than simply a total; and
- expenditures for salaries and benefits for instruction and for all categories of support services rather than simply a total.

Some nonfiscal data included in the earlier FNF and UFNF files have not been included in the FNFD and UFNFD files. The specific items not included are

- enrollment counts by race/ethnicity;
- special education enrollment;
- counts of students eligible for school lunch programs; and
- district locale codes.

The imputed values for these variables covering the years 1989–90 through 1999–2000 are included in the earlier FNF and UFNF files, which are available online at <http://nces.ed.gov/ccd/CCD13YR.ASP>. Unimputed values for all years can be pulled from the annual CCD data files, available online at <http://nces.ed.gov/ccd/ccddata.asp>. Please see section C in the User’s Guide below for more specific guidance on merging related data with the FNFD and UFNFD files.

B. School Finance Data

NCES has two annual collections of public elementary/secondary education finance data, which are the National Public Education Finance Survey (NPEFS) and the School District Finance Survey (Form F-33). The FNFD and the UFNFD files are based on the F-33 data. The data collected by the F-33 consist of revenue and expenditure amounts in varying levels of detail. Revenues are categorized by their source (e.g., local, state and federal). Expenditures are

Introduction

categorized by function and object. Functions describe the activity for which a service or material object is acquired (e.g., instruction, support services, food services). Objects describe the service or commodity obtained as the result of a specific expenditure (e.g., salaries, benefits, supplies). The full array of revenue categories, functions and objects are detailed in the NCES handbook, *Financial Accounting for Local and State School Systems: 2003 Edition*, available online at <http://nces.ed.gov/pubsearch/pubsinfo.asp?pubid=2004318>.

The F-33 does not collect data for all possible revenue sources, functions and objects. The survey forms show in detail the data actually collected, including the source, function and object codes. The grid shown below is from the FY 2002 F-33 survey form. (The complete form is in appendix F). It shows the specific data items collected for elementary-secondary instructional programs. The rows are function categories; the columns are two of the possible object codes (salaries and benefits) and the total of expenditures for the function. There are other object expenditures that are included in the total but not separately enumerated in the F-33. Of the items shown in this grid, the earlier FNF and UFNF researcher files included only a total for instruction expenditures and a total for all support services. The FNFD and the UFNFD files include the items in the grid.

Part II CURRENT OPERATION EXPENDITURE – All amounts paid excluding internal transfers and amounts reported in parts III, IV3–6, VIA3, and IX6–14.			
Section A – ELEMENTARY-SECONDARY EDUCATION INSTRUCTIONAL PROGRAMS – PREKINDERGARTEN THROUGH GRADE 12	Salaries only (Object 100) (1)	Employee benefits only (Object 200) (2)	TOTAL (ALL current operation objects) (3)
1. Instruction (1000)	V33	V10	E13
2. Support services, pupils (2100)	V11	V12	E17
3. Support services, instructional staff (2200)	V13	V14	E07
4. Support services, general administration (2300)	V15	V16	E06
5. Support services, school administration (2400)	V17	V18	E09
6. Support services, operation and maintenance of plant (2600)	V21	V22	V40
7. Support services, student transportation (2700)	V23	V24	V45
8. Business/central/other support services (2500, 2800, and 2900)	V37	V38	V50

C. Background

One of the challenges limiting the capability for analysis of educational issues is that data on school enrollments, staffing, and financing are collected through separate but annually conducted fiscal and nonfiscal universe surveys. Because the data are collected and provided by separate agencies, the available data from the nation's school districts are often inconsistent or incomplete. Analyses of trends in variation among school districts in enrollments, resources, and finances are made difficult by these limitations.

- In some states, all districts are unified (i.e., serve grades from kindergarten through grade 12), but in other states some cities or counties have separate elementary and secondary districts.

Introduction

- Over years, districts consolidate, and some districts disappear and others emerge as populations move.
- ‘School districts’ include both agencies managing regular public schools and special purpose agencies not involved directly in managing regular public schools.
- Some districts fail to report data for some years.

Ignoring these data limitations can dramatically distort the assessment of educational trends. The limitations are especially problematic in analyses that attempt to examine trends in the relationships between resource levels and achievement and trends in the extent of enrollment and resource disparities among the units within a national school system.

This documentation describes the creation of a database to address this problem. The new database updates the earlier FNF and UFNF files, and contains *fiscal* and *nonfiscal* district data for each year from 1989–90 to 2001–02, for the universe of *regular* public elementary and secondary school districts. At NCES, *nonfiscal* data are collected from school districts through several separate surveys of the Common Core of Data (CCD). The data resulting from these surveys are reported nationally in the United States.

Fiscal data on school districts are collected by the Common Core of Data School District Finance Survey (F-33), which consists of data submitted annually to NCES by state education agencies (SEAs, or state departments of education) in the 50 states and the District of Columbia.¹ The purpose of the F-33 survey is to provide finance data for all local education agencies (LEAs or school districts) that provide free public elementary and secondary education in the United States. The *fiscal* data contained on the FNFD and the UFNFD data files encompass both 11 revenue and expenditure classes (e.g., total federal revenue, total state revenue, total local revenue, total current instructional expenditure, total current expenditure for support services) and selected ‘detail’ variables (e.g., revenues from individual federal programs) which represent components of some of the categorical totals. In the earlier FNF and UFNF files, the only fiscal variables included were the 11 functional variables. The FNFD and UFNFD files include an additional 47 ‘detail’ variables for the 1990–91 through 2001–02 school years: the components of total federal and state revenues, and the components of current expenditures for instruction and for support services.

Files in the CCD system of surveys, both *fiscal* and *nonfiscal*, are designed and developed to include all types of school districts and other operating units. Accordingly, the CCD files contain a substantial number of records representing administrative and operating units that are unlike typical public schools and school districts. Definitions and categories used in the CCD differentiate among these different types of units but are still sufficiently generic to include a

¹ Both NCES and the Governments Division of the U.S. Bureau of the Census collaborate in their efforts to gather these data. Census is required to collect government finance data under Title 13 U.S.C. Section 182. NCES is authorized to collect these data from the states by Congress through the National Education Statistics Act of 1995, section 404(a), (20 U.S.C. 9003(a)). Census acts as the primary collection agent and produces two data files: one for distribution and reporting by Census and the other for distribution and reporting by NCES. The two data files differ in the inclusion in the NCES file of state government expenditures for and on behalf of school districts in certain subtotals, in the classification of certain revenues as being from local or state sources, and in the inclusion of state-chartered charter school districts. In addition, the data files differ in name. Census refers to its data file as the *Annual Survey of Local Government Finances: School Systems* and NCES refers to theirs as the *Common Core of Data, School District Finance Survey*. The financial data included in the two longitudinal files presented herein were based solely upon the Common Core of Data School District Finance Survey released by NCES.

Introduction

varied range of organizational structures within each type of district. The system provides features that enable state education agencies and data users to identify and select records according to the categories of interest to them. The principal users of CCD *fiscal* data are the federal government, the education research community, state and local government officials (including school boards and LEA administrators), and the general public. The availability of a longitudinal file, which combines demographic and other nonfiscal information with fiscal information on regular public school districts, will facilitate their work.

The NCES Longitudinal School District Fiscal-Nonfiscal Detail (FNFD) file, whose development is described in this report, merges data extracted from the longitudinal CCD regular district *nonfiscal* database² with extracts from the F-33 *fiscal* survey data for the school years 1989–90 through 2001–02. The database is designed for research use in testing hypotheses about longitudinal trends in school districts over this period. To facilitate analysis, all missing data have been replaced by statistical imputations, clearly erroneous responses have been edited and replaced by plausible values, and subtotals have been edited such that the sum of them is equal to the sum of the categorical totals, where all components of the function are present. In all cases of the above, the imputation flag ‘M’ has been set to reflect that the values have been changed from their original, reported values.

The database is available in two forms. The primary longitudinal Fiscal-Nonfiscal Detail (FNFD) file in the database contains a separate record for each regular school district that was operating for some time during the 1990s. The other longitudinal file, the Unified Fiscal-Nonfiscal Detail (UFNFD) file, combines data from separate elementary districts with the secondary districts they feed, so that each record contains data for a unified K–12 ‘pseudo-district.’ (‘Elementary’ districts typically covered grades K–8, while ‘secondary’ districts typically covered grades 9–12.) Both the FNFD and UFNFD files contain the same aggregate numbers of students and dollars each year, since folding the elementary districts (present in the FNFD) into the K–12 pseudo-districts (in the UFNFD) neither lost nor created any students or dollars.

The decision to develop the earlier FNF database was a logical extension of a recently completed NCES project that demonstrated the feasibility of using methods of imputation to convert universe survey data into complete longitudinal data sets for analyses requiring data from several variables across different surveys. In that project, annual data from the CCD Local Education Agency *Nonfiscal* Universe Survey were transformed using methods of data editing and imputation into a complete longitudinal data set, called the School District Universe Survey Longitudinal File, which contains *nonfiscal* values for all CCD variables over a 13-year period. The variables it includes cover school enrollments, student demographics, staffing, and other areas. It has since proved to be very popular with researchers. The success of the creation of the LEA Universe Survey Longitudinal File for CCD nonfiscal data spurred an attempt to replicate the nonfiscal longitudinal work with the CCD school district fiscal (F-33) data for the school years 1989–90 through 1999–2000 (FY 1990 through FY 2000) and merge the two longitudinal series of files into a combined longitudinal research file containing both the fiscal and nonfiscal data for the decade, for the 15,144 regular school districts that were open for at least a year

² U.S. Department of Education, National Center for Educational Statistics, The NCES Common Core of Data (CCD), ‘Local Education Agency (School District) Universe Survey Longitudinal Data,’ 1986–1998.

Introduction

during this time.³ The regular districts included in the longitudinal files serve the vast majority of the nation's public school students. Following the successful creation of the earlier FNF and the UFNF database, the 'Detail' FNF (FNFD) and 'Detail' UFNF (UFNFD) data files were developed. It provides researchers with 13 years of imputed fiscal data containing the additional 47 fiscal variables, together with a few selected nonfiscal variables, which also have been imputed.

D. Procedures

To produce the earlier FNF database, analysts addressed four specific challenges that previous school finance researchers had identified when attempting to construct a *fiscal* longitudinal data set:

1. Identify which school districts to include as meeting the definition of regular public elementary and secondary school districts.
2. Identify patterns of district consolidation and transfers of students from closed districts.
3. Identify links between separate elementary and secondary districts serving the same students in different grades.
4. Impute values for missing data.

1. Identifying 'regular' districts

The first challenge to developing a longitudinal research file is that the variety of administrative structures referred to as school districts in the *nonfiscal* universe of school districts and in the *fiscal* (F-33) universe of school districts are not the same.

Because the F-33 survey is limited to local governments within the United States, it excludes the state and federal school districts and the districts in the outlying territories, all of which are included in the *nonfiscal* district universe. (Federal school districts include those under the Bureau of Indian Affairs, and schools administered by the Department of Defense for DoD dependents.)

This challenge is well summarized by the following paragraph:

District-level analyses and comparisons can be complicated by the variety of administrative structures that exist across the nation in regular school districts. States such as Florida, Maryland, Nevada, and West Virginia have large districts that are coterminous with counties and encompass all levels and types of public schools. School districts in other states may exist in small communities with only one school, or in larger communities where all elementary schools are in one school district and all secondary schools are in another. In some states, all special education schools are administered by a few specific districts; while in other states each district may have all kinds of different schools and programs. This variety in the types of school districts makes comparison of school districts difficult. (Johnson 2003, p. 112)

³The 15,144 regular school districts are aggregated into 11,481 unified (K-12) 'pseudo-districts' in a second step. It should be noted that the database does not include data for the approximately 2,000 nonregular school districts (special education districts, regional districts, state institutions, and charter schools identified by CCD as districts, among others).

Introduction

In addition, the *nonfiscal* NCES ‘TYPE’ code (which classifies districts into quasi-administrative types based on whether they stand alone administratively, receive administrative services, provide administrative services locally or regionally, are state or federally operated, or have some other administrative structure) fails to differentiate between districts with ‘typical’ or ‘regular’ expenditures and those with ‘atypical’ expenditures—districts that are exclusively special education or vocational education districts, for example.

This challenge was overcome in part by the creation and use of a new agency finance typology to facilitate analysis of district-level finance data. This typology is incorporated into these data files as the variable FINANCE_TYPE. The FINANCE_TYPE has been used to restrict these data files to regular, local education agencies. School districts that serve administrative functions exclusively, provide only special or vocational education, or are administered directly by state or federal governments have been excluded from these files. Nonoperational and charter school districts have also been excluded. No attempt was made to distribute the funds used by these excluded districts among the regular, local education agencies or to otherwise account for them in the FNFD or UFNFD data files.

Table 1 shows the percentage of total mean annual expenditures, recorded in the unedited, yearly F-33 files that are in ‘nonregular’ districts, and have thus not been included in the FNFD file. Nationally, only 4 percent of total expenditures are attributable to ‘nonregular’ districts. Thus, the vast majority of expenditures are included in the cases included in the FNFD file.

2. Identifying district consolidation linkages

A second challenge that fiscal analysts encounter when attempting longitudinal analysis of school district *fiscal* files is that school district reorganizations and consolidations occur, particularly among those states with single-school and nonoperating school districts. The NCES CCD *nonfiscal* data collectors spend a great deal of time and effort assessing the school districts that either remain in operation, close, or are incorporated into other school districts. However, there is no link on these individual files to show which school district takes responsibility for a district’s students in the year after it closes. This challenge was addressed by using both enrollment and geographic data to identify these linkages. The linkages are documented in the data file by the variables NXTYRID1 and NXTYRID2 (next year ID-1 and next year ID-2) which contain the NCES ID of the successor school district(s).

Introduction

Table 1. Mean annual total expenditures for all F-33 districts and for regular F-33 districts and the percent of total expenditures not in regular districts, by state (unimputed figures): Fiscal years 1990 through 2002
[Numbers in thousands]

3. Identifying linkages between separate elementary and secondary districts

The third challenge arises because of a particular variation in the organization of school districts in the United States: although the majority of school districts in the United States are ‘unified,’ in that they manage schools serving all grades in the grade range from kindergarten through twelfth grade, some states and municipalities maintain separate elementary districts, whose students transfer to schools in separate secondary or unified districts for their secondary education.

Researchers should be aware that many measures, such as mean per pupil expenditures, are different for districts with different grade spans.

(One) reason for examining elementary districts, secondary districts, and unified districts separately is that there is a potential bias if all districts are examined together. This happens because expenditures are typically higher for secondary students than elementary students. In a state with mostly separate elementary districts and secondary districts, this difference in expenditures will be reflected in artificially high values for the disparity measures. In a state with mostly unified districts, these differences in spending will still occur, but they will not be observed as spending for elementary and secondary students is combined. (Hussar and Sonnenberg 2000, p. 7)

For example, the mean per pupil total expenditure for school districts open during the 1999–2000 school year (PTOTEX00) is about \$9,200 for K–8 school districts, compared to \$10,800 for districts with a grade 9–12 span. (Source: U.S. Department of Education, National Center for Education Statistics, Common Core of Data (CCD), Longitudinal School District Fiscal-Nonfiscal File, Fiscal Years 1990 to 2000) Therefore, analyses that attempt to estimate the relation between expenditures and other school characteristics will be distorted when they compare school districts, ignoring the elementary/secondary differential.

To avoid these distortions, such comparisons should be carried out using the UFNFD file of unified K–12 pseudo-districts. This file complements the primary longitudinal school district Fiscal-Nonfiscal Detail (FNFD) file. The *nonunified* FNFD file consists of one record for each of 15,181 regular public elementary and secondary school districts. That record contains both *fiscal* and *nonfiscal* information for each year from 1989–90 to 2001–02 in which the school district was open. For years in which the school district was open, any missing *fiscal* information has been replaced with imputed values. The complementary UFNFD file in the database contains *unified* K–12 pseudo-districts, and presents the same total information, but has combined the information from separate elementary districts with the ‘target’ districts to which their students transfer for secondary education after leaving elementary grades. That file contains one record for each of 11,518 unified and pseudo-unified K–12 districts.

The selection of which of the two files in the database (FNFD or UFNFD) to use for analysis depends on the purpose of the study. Many educational research and evaluation studies that aim to compare school districts in a randomly selected sample will benefit from the availability of the unified K–12 pseudo-district UFNFD file as a sampling frame: per pupil revenues and expenditures, student characteristics, and outcomes can be compared across similarly situated districts or district clusters (i.e., pseudo-districts).

On the other hand, the primary FNFD file, presenting data for elementary, secondary, and unified districts in separate records, will be valuable for studies of (1) the differences in trends between elementary and secondary districts, (2) the differences between unified districts and separate elementary/secondary districts, and (3) district consolidations over time.

4. Filling in missing data

A fourth challenge for longitudinal analysis is to eliminate biases created by missing data. Data were missing for a variety of reasons. One reason for much of the missing data was that before 1995 the F-33 collection included only a sample of school districts for some states in some years rather than the universe of all districts. In the 1993 fiscal year, for example, F-33 was a universe survey in 41 states but a sample survey in 9 states. In the 1994 fiscal year the F-33 data come from sample surveys in 8 states. Since 1995, the F-33 has been a universe collection of all public school districts, excluding charter school districts.

Because of the different universe definitions, the sampling in earlier years of the F-33 collection, and other reasons, there is not a perfect, one-to-one matching of records in the *nonfiscal* and *fiscal* data files. This is illustrated by table 2, taken from a feasibility study, which showed the number of districts in each year that were found only in either the *fiscal* or *nonfiscal* data files and the number that were found in both.

Table 2. Number of districts with nonfiscal or fiscal CCD data, by source of data, type of district and year:

Fiscal years 1990 through 1998

Fiscal year	F-33 Fiscal only			CCD Nonfiscal only				Matched CCD Nonfiscal and F-33 Fiscal			
	Invalid NCEID	Without students	With students	Regular districts		Other districts		Regular districts		Other districts	
				Without students	With students	Without students	With students	Without students	With students	Without students	With students
1990	276	66	31	1	48	659	203	4	15,077	523	359
1991	230	94	32	3	2,225	598	206	3	12,819	420	336
1992	238	148	54	1	53	489	188	4	14,890	578	321
1993	217	150	44	4	1,745	706	260	1	13,062	543	115

SOURCE: American Institutes for Research. (2002, November). *Assessment of Effort Required to Incorporate F-33 Data Into the Longitudinal CCD District File for Twelve Years (1986–1987 through 1997–1998 School Years)*. Palo Alto, CA: Don McLaughlin and Charles Blankenship.

Irrespective of reason, each year, sampled or not, had occurrences of missing data, with more missing data existing in earlier years than recent ones. These missing data represented an important challenge to overcome, because missing data introduce bias into analyses, when using software that treat a data set as if it were complete. To address this challenge, American Institutes for Research (AIR) imputed values for missing finance survey data. For a district missing a value in a particular year, fiscal information received from that district in other survey years was used along with other district characteristics that were not missing. For the 20 districts for which the file contained no fiscal information for any year (e.g., for districts included in the nonfiscal survey but never in the fiscal survey), AIR randomly imputed fiscal information from the distribution of nonfiscal information for similar districts. Because educational policy analyses are concerned with correlates of per pupil finance measures, all computations for imputation were carried out on per pupil revenues and expenditures, rather than total revenues and expenditures. More particulars about the imputations are presented in the methodology section of the User's Guide below.

Introduction

A similar challenge existed with regard to differences in reported values between the fiscal and nonfiscal membership counts (i.e., total fall enrollment), which appear in both data sources, and which would be essential for calculating per pupil fiscal measures. In the vast majority of cases, the enrollment counts match. However, in some cases they do not (see table 3 in the User's Guide for a summary count). To address this challenge, AIR identified all cases where the reported numbers were different in the fiscal vs. the nonfiscal files for investigation, viewed the trends in membership for plausibility, and chose the more plausible of the two reported values. In most cases, that was the nonfiscal membership, as those numbers had already undergone data validation and had been previously edited with imputed values. Of note,

...[these] differences do not necessarily indicate errors in either data collection system. F-33 only collects data on local school systems, while NCES collects information on all schools in a state, including those operated by state agencies. Also, many states administer fiscal issues differently than nonfiscal issues. For example, it is not unusual for some states to have a number of districts independent for nonfiscal purposes (day-to-day operation, curriculum, personnel), but consolidated for fiscal purposes. Hence, the NCES effort involves a listing of local education units and all their data, while the F-33 survey focuses on the fiscal aspects of governments only. (Hussar and Sonnenberg 2000, p. 6)

To summarize, analysts faced a number of challenges when attempting to construct the Longitudinal School District Fiscal-Nonfiscal Detail (FNFD) Database. The combined file required extensive editing and imputation, and resolution of long-standing gaps in knowledge about school districts, such as their sending-receiving relationships and consolidation patterns.

The FNFD database is designed for research use in testing hypotheses about school districts' longitudinal trends. Unlike the individual yearly CCD files from which they were assembled, the two longitudinal files are not just a combination of 'snapshots' of the best available information, submitted by each LEA, at a given point in time. Rather, by linking the individual yearly CCD files together, each yearly element of each district's data could be used to identify reporting abnormalities in yearly trends, which were edited/imputed using modeling techniques.

The remainder of this documentation consists of a user's guide and appendixes. The user's guide contains a detailed description of the imputation methodology.

Appendix A—Record Layout (Primary File) gives the variable names and labels of the data elements discussed throughout the documentation, as well as their location on the data files.

Appendix B—Record Layout (Unified File) gives the variable names and labels of the data elements discussed throughout the documentation, as well as their location on the data files.

Appendix C—Glossary defines all of the *fiscal* and *nonfiscal* data items.

Appendix D—Frequencies of Categorical Variables provides information about the frequency and distribution of data elements across local education agencies.

Appendix E—Ranges of Selected Variables provides information about the distribution of selected data elements across local education agencies.

Appendix F—Sample Survey Form includes a facsimile of the F-33 data collection instrument for FY 2000.

Appendix G— Sample SAS Program shows how school level data can be aggregated and merged with the district longitudinal data files.

Introduction

Appendix H— Sample SPSS Program shows how school level data can be aggregated and merged with the district longitudinal data files.

II. User's Guide

A. Methodology

1. Scope

Data Sources. Data from four sources were combined for this effort. First, the 1990–2000 NCES F-33 fiscal files were obtained from Kforce Government Solutions (KGS), where the files had already undergone significant editing. (This editing was for agency identification and consistency of totals and subtotals with detail amounts. It did not include any imputations.) Second, district-level data for 1990–2000 were extracted from the NCES CCD longitudinal nonfiscal database, which includes imputed school- and district-level data for 1986–87 through 1998–99. Third, data from the 2000–01 Elementary and Secondary School Survey conducted by the Department of Education's Office of Civil Rights were used to identify school districts that provide primarily special education services, rather than providing a comprehensive education. Fourth, F-33 fiscal data and nonfiscal data for the 2000–01 and 2001–02 school years were downloaded from the NCES website for use by AIR.

The FNFD and UFNFD files combine data from the nonfiscal Local Education Agency (School District) Universe Survey with fiscal data from the F-33 survey for the school years 1989–90 through 2001–02. The FNFD file contains data for the 15,181 regular school districts that were open for at least 1 year between 1989–90 and 2001–02. It does not include data for the approximately 2,000 nonregular school districts (special or vocational education districts, regional districts, state institutions, charter school districts, and so on). The vast majority of the nation's public school students are served by the regular districts included in the longitudinal file.

These data provide the basis for studying trends in the relationships of school district characteristics, such as enrollment, locale, poverty, ethnic distribution, and student/teacher ratio, to revenues and expenditures for education.

The data are contained in two files: (1) a file with a record for each regular district, including elementary, secondary, and unified districts, and (2) a file of unified and pseudo-unified districts, in which all elementary districts' data have been incorporated into the local secondary or unified district to which its students progress after completing elementary school. The 'pseudo-district' file represents the information as a set of 11,518 regular, unified districts that cover the full grade range from kindergarten to 12th grade.

2. Procedures

Selection of Districts. AIR had previously developed both 12- and 13-year versions of the imputed nonfiscal Local Education Agency (School District) Longitudinal Data Files.⁴ These included only districts typed 'regular' (i.e., districts for which the CCD 'TYPE' indicator was either 'regular' or a 'school component of a supervisory union') in a year in which the district reported students enrolled. This criterion resulted in the inclusion of some districts that are classified in other years as 'regional' or 'state-operated' (special education) schools. In recent years, charter schools (with CCD TYPE = 'other') were added for consistency, because in many states these districts were coded as 'regular.' KGS, in conjunction with the Educational Statistical Services Institute (ESSI),

⁴ These files, the Local Education Agency (School District) and School Universe Survey Longitudinal Data Files: 1986-1997 (12-year) and 1986-1998 (13-year), are available online at <http://nces.ed.gov/ccd/CCD13YR.ASP>.

generated a 'FINANCE_TYPE' indicator for districts. This 'FINANCE_TYPE' was used to identify education service agencies, charter school districts, and districts outside the scope of F-33, all of which were excluded from this longitudinal file.

To create pseudo-unified districts combining elementary districts with their target secondary districts, a district serving secondary students ('SECLEA') was identified for each elementary district. AIR identified these SECLEAs by comparing enrollments and addresses. This had previously been done for the 1992–93 school year; the 1992–93 results were updated for the 2000–01 school year for this project. The process of establishing these linkages is a time-consuming one, relying mostly on enrollment numbers and maps. Resources did not permit verification of the linkages for each year included in these files. Researchers who wish to make use of the elementary-secondary links in this file should note that these linkages have only been established for the two years mentioned. Applying these linkages to the whole 13-year span of the data file assumes they did not change during this period.

Tracking successor districts. NXTYRID1 and NXTYRID2: Some districts closed during the 13-year period. For each district that closed, NXTYRID1 is the unique, NCES-assigned identification number (LEAID) of the district that inherited its students the year following the (first) closure. It was assigned by examining both distances between districts and changes in enrollments between successive years. Two districts, 2505340 and 4109810, closed, reopened, and closed again during the 13-year period. NXTYRID2 indicates the districts that inherited their students after the second closure.

Selection of Measures. The 14-year longitudinal nonfiscal CCD district file, which includes data for 1986–87 through 1999–2000, was the source for most of the nonfiscal measures included in this longitudinal finance file. Nonfiscal data for the 2000–01 and 2001–02 school years were extracted from the most recently published versions downloaded from the NCES website. Fiscal measures include 58 revenue and expenditure measures taken from the F-33 survey of school districts, plus corresponding per pupil measures, computed by dividing total figures by the reported enrollment. Although the F-33 files contain their own estimate of enrollment, AIR used the enrollment figures from the CCD longitudinal nonfiscal database, which had been edited as part of building that file. There were four district records in which the F-33 enrollment figures appeared more reasonable than the CCD figures and the F-33 value was used.

Imputation. Imputation was carried out in five stages: (1) imputation of nonfiscal variables, (2) identification of nonmissing data that are likely spurious, (3) creation of intermediate variables, (4) imputation of intermediate variables for cases missing all fiscal information in years, (5) imputation of individual year-by-year district values.

1. *Imputation of nonfiscal variables.* Nonfiscal variables for total enrollment (MEMBERyy), full-time equivalent teacher count (FTEyy), lowest and highest grades served (GSHIyy, GSLOyy), and the number of schools in the district (SCHyy) were imputed following the same methodology used to create the *Local Education Agency (School District) and School Universe Survey Longitudinal Data Files: 1986–1998 (13-year)* database, which has been previously described in McLaughlin, 2003. The imputation of those nonfiscal variables provides the foundation upon which the fiscal variables' imputation would depend.
2. *Spurious data checks.* Previously, in developing the longitudinal CCD nonfiscal database, an important step was the identification and removal of obvious figures likely to be the result of a reporting error, such as enrollments that jumped by a factor of four for one

isolated year while the number of teachers remained constant. Similar checks were performed on the fiscal variables as part of the imputation process; however, there were virtually no cases in which a 1-year spike (upward or downward) in revenues was obviously spurious. The complexity of fiscal transactions, including transfers of funds between districts, yields spikes that are credibly accurate fiscal reports. Prior to the 1999–2000 school year, no reported values other than a few zeros were edited. Except for those few zeros, all imputations were to replace missing values in the original files. AIR imputed for both missing records and the cases not included in samples in some years. There were very few or no cases with some missing and some nonmissing F-33 variables. Starting in the 1999–2000 school year, however, it was necessary to edit some ‘spikes’ in the following per pupil fiscal functions: PNELSCyy (non-elementary/secondary programs expenditures), PSTREVyy (state revenues), PLOCRVyy (local revenues), PFEDRVyy (federal revenues), PCOTHRyy (other elementary/secondary programs expenditures), as abnormal values were identified which appeared to be the result of either including or excluding money or enrollment pertaining to charter schools being outside the public district one year and inside the district the next year.

3. *Intermediate variables.* First, all fiscal measures were transformed to per pupil measures by dividing by the corresponding membership measure. Two choices were available for the denominator of this ratio: the MEMBERyy measure in the school district universe longitudinal file and V33 in the fiscal file. The MEMBERyy measure had undergone both longitudinal editing (comparison to adjacent years) and relational editing (comparison to FTEyy counts) and imputation in the course of creating the longitudinal file. For this reason, it was considered the more reliable of the two measures. In the vast majority of cases, these values agreed. Nearly all of the cases in which they did not agree were districts for which the MEMBERyy values had previously been edit-checked and replaced with more reasonable values, so those values were used for the denominator. In a small number of cases ($n = 4$) the V33 value was considered more reasonable and was used as the denominator. Table 3 summarizes the discrepancies found between the CCD and F-33 enrollment counts.

Second, a linear trend was estimated for each fiscal measure of per pupil revenues and expenditures, and for each district with at least 3 years of data. Using that linear trend, a value for 1995 (the middle year of the decade) was estimated. The estimated value for 1995, of course, was different from the actual value for 1995. The estimated 1995 value and the estimated annual rate of change were used as intermediate variables in the imputation. For districts with 1 or 2 years of data, the mean value was used as the 1995 estimate and the annual rate of change estimate was set to zero. For other districts, the estimated 1995 mean was constrained to be within the highest and lowest reported values for individual years, and the slope was constrained so that the linear estimate for extreme years (1990 and 2002) would be nonnegative. If the slope was sufficiently positive that the extrapolated estimate for 1990 would be negative, the slope was reduced by a factor that would yield an extrapolated value of 0 for 1990. Similarly, if the slope was sufficiently negative that the extrapolated estimate for 2002 would be negative, the slope was increased (made less negative) by a factor that would yield an extrapolated value of 0 for 2002.

Table 3. Frequencies of discrepancies in enrollment counts between CCD fiscal and nonfiscal data files: Fiscal years 1990 through 2002						
Discrepancy						
Fiscal year	One is zero	One is missing	Neither is missing or zero		Imputed CCD values	No discrepancy
			Discrepancy < 10 percent or enrollment < 50	Discrepancy \geq 10 percent or enrollment \geq 50		
1990	43	27	6,862	410	21	7,563
1991	26	2,195	5,479	318	39	6,803
1992	26	31	605	44	539	14,015
1993	14	1,698	69	40	17	12,767
1994	18	2,217	18	17	12	12,157
1995	8	14	386	12	13	13,891
1996	5	11	10	20	22	14,193
1997	2	14	571	35	1,486	13,562
1998	11	20	464	21	911	13,611
1999	3	9	612	23	38	13,429
2000	5	17	730	98	5	13,235
2001	29	27	137	86	—	14,977
2002	27	28	156	85	—	14,959

— Imputed values of CCD Membership are not available for FY 2001 or FY2002

SOURCE: U.S. Department of Education, The NCES Common Core of Data (CCD), "School District Finance Survey (Form F-33)," 1989-90 through 2001-02.

4. *Imputation for districts with no fiscal data.* Only a few districts had no data for any year (16 of 7,727 small districts and 4 of 7,417 large districts were missing each measure in all years). For these districts, the first step was to impute values for the estimated 1995 value and for the annual rate of change. The procedure involved five steps:

(i) The file was divided in halves: districts with average enrollment of 1,000 or more (large districts) and districts with average enrollment of less than 1,000 (small districts). The purpose of this division was to avoid imputing large random variation for large districts; predictions of per pupil fiscal measures were uniformly more accurate for large districts than for small districts, and the regression error estimates were used to add appropriate unpredicted (random) variation to the imputed values. Carrying out the imputation separately for large and small districts improved the stability of the results.

(ii) A preliminary linear regression was computed, predicting the estimated 1995 mean and the annual rate of change from the following predictors: highest grade, lowest grade, 13-year (1990–2002) averages of membership, teacher/pupil ratio, percent special education, percent free lunch eligible, percent black, percent Hispanic, and state indicators.

In order to preserve the correlation among the fiscal measures, the first fiscal measure imputed, per pupil current elementary/secondary expenditure (PCELSCyy), was included as a predictor in the model for the other expenditure measures and for per pupil total revenues, and per pupil total revenue (PTOTRVyy) was included in the model for the other revenue measures.

(iii) Observations whose values are more than 3.5 standard deviations from the values predicted by the linear regression were deleted from a temporary file. The purpose of this

was to avoid imputing outliers. The effect of this was to reduce the standard errors resulting from the final linear regression and thus the size of the random variation in the imputations.

(iv) A final linear regression was estimated, replicating the preliminary regression on the reduced dataset. The regression parameters and root mean squared error were retained for the imputation in the next step. The values of R^2 and root mean squared error (r.m.s.e.) are shown in table 4. The predictive precision is greater for large districts and estimated means than for small districts and rates of change; and it is less for capital outlays and non-elementary/secondary expenditures than for other measures.

Table 4. Regression statistics for prediction of estimated 1995 score and annual rate of change

Measure	Estimated 1995 score				Annual rate of change

PLOCRV	0.964	720	0.935	1,187	0.849	63	0.798	132

NOTE: "R.M.S.E." means "root mean squared error."
 SOURCE: U.S. Department of Education, The NCES Common Core of Data (CCD), "Longitudinal School District Finance File," 1989-90 through 2001-02

(v) The regression weights derived in steps i–iv above were applied to the predictor measures for the districts missing the dependent variable to obtain point estimates. These weights indicate the relations among the various measures across the database, and were used here to ensure that imputed values have the same relations to measures that are present as the reported values for that measure do. A random approximately normal deviate with standard deviation equal to the regression root mean squared error was added to represent the unpredicted proportion of variance. To avoid imputing outliers, the random normal deviate was truncated at ± 2 times the R.M.S.E. Thus, for example, the random component for the estimated 1995 mean per pupil current elementary and secondary expenditure was constrained between $-\$1,294$ and $+\$1,294$ for large districts and $-\$2,458$ and $+\$2,458$ for small districts (see table 4).

5. *Imputation of individual year values.* At the completion of step iii estimated 1995 means and annual rates of change are available for all districts on the file. Imputation was then carried out independently, one year at a time, for each of the other years. The procedure for imputing individual years replicated the five-step procedure for imputing estimated 1995 means and annual rates of change, with the exception that the individual district's estimated 1995 mean and annual rate of change were included as predictors.

Two additional constraints were placed on the imputed values: (1) if enrollment was zero (and fiscal information was missing), the fiscal measures were set to zero; and (2) if the imputed value

was negative, it was set to zero. Further, if enrollment was zero, and fiscal measures were not missing, per pupil measures were set to zero. For the measures that had few reported zeros, there were only a handful of negative imputations, and for the measures with many zeros (such as non-elementary/secondary expenditures), a few hundred negative imputations were reset to zero. Generally, the resulting percentages of zeros among imputed values matched the percentages for reported values. Further, if enrollment was zero, and fiscal measures were greater than zero, the per pupil measures were set to zero. Thus, for example, a district with no students might have a positive total expenditure value, but show a zero per pupil total expenditure.

The average fit statistics across 11 years for individual imputation regressions are shown in table 5. The relations between the fiscal measures and their predictors were quite strong, the only exception being capital outlays.

Measure	Large districts		Small districts	
	R ²	R.M.S.E. ¹ (in dollars)	R ²	R.M.S.E. ¹ (in dollars)

The numbers of districts for which primary fiscal values were imputed is shown in table 6 over the entire 13-year period. The vast majority of imputations were for missing data in 1991, 1993, and 1994. Generally, districts were either missing all fiscal measures for a year or none.

Table 6. Number of districts for which fiscal functions were imputed, by measure and fiscal year

¹ 1,282 of the 1,318 CELSC imputations reflect differences between CELSC and the sum of its components of less than 10 dollars.

² 1,346 of the 1,373 TOTRV imputations reflect differences between the sum of federal, state and local revenue and total revenue of less than 10 dollars.

NOTE: The measure in the left-most column is the name of the imputation flag from the data file where 'yy' represents the last two digits of the fiscal year.

SOURCE: U.S. Department of Education, National Center for Education Statistics Common Core of Data (CCD), Longitudinal Fiscal-Nonfiscal Detail File, 1989-90 through 2001-02.

Once the imputation was completed for per pupil revenues and expenditure functions, total fiscal measures were recreated by multiplying per pupil measures by enrollments. This was done to facilitate analyses that use total measures. The reason for imputing per pupil measures rather than total measures was to preserve the relations among fiscal and nonfiscal measures. For example, a relationship between race and expenditures will show up not in the correlation of race with total expenditures but in the correlation of race with per pupil expenditures.

Imputation of fiscal object variables. The 11 function measures, shown in table 6 and discussed above, are totals of various functional categories. The detail fiscal-nonfiscal file includes 47 detail fiscal measures (federal and state revenues details; salary and benefits expenditures for instruction; and details for support services expenditures. These are listed in table 21 below). After all of the 11 function measures were imputed, the 47 per pupil detail variables were imputed with each per pupil function subtotal serving as its predictor. For example, per pupil instructional expenditures (PCINSTyy) include two objects: salaries (PZ33_yy) and benefits (PV10_yy). Missing and/or abnormal values of per pupil object PZ33 were imputed using a model with PCINSTyy as its predictor, and missing and/or abnormal values of PV10_yy also were imputed, also using PCINSTyy as its predictor. This was done using separate models for districts of 'small' (fewer than 500 students), 'medium' (500 to 2000 students), and 'large' (more than 2000 students) district sizes, with each years fiscal objects being imputed using the fiscal function variable from the same year.

After the imputation of the detail fiscal variables was performed, some object subtotals of their associated functional measures were adjusted (while maintaining the ratio of each object to its function) using ratio estimation techniques, such that the sum of their subtotals was forced to equal that of the function measure. In all cases where this was done, imputation flags were set. This 'adjustment,' however, was only done when all components of the function were included in the scope of this database. Table 7 below shows the variables for which all components were present, and which were thus adjusted as necessary to sum up properly.

User's Guide

Table 7. Variables whose subtotals were forced to sum to the total

Measure	Component measures whose subtotals are forced to sum to their function measure
TOTRVyy	FEDRVyy + STREVVyy + LOCRVyy
FEDRVyy	C14_yy + C15_yy + C16_yy + C17_yy + C18_yy + C19_yy + C20_yy + C25_yy + C36_yy + B10_yy + B11_yy + B12_yy + B13_yy
CELSVyy	CINSTyy + CSSVCyy + COTHRyy

NOTE: In the variable names shown above, 'yy' represents the last two digits of the fiscal year.

Creation of Pseudo-Districts. As a final step, elementary districts were removed from the file and their data were aggregated into pseudo-unified districts to create a file in which all districts have grade spans from pre-kindergarten (PK), kindergarten (KG), or first grade through grade 12. In fact, however, it was impossible to match up all the elementary and secondary districts this way; 125 districts were thus designated as 'other regular' districts (FINANCE_TYPE = 'OR'). Of these 125 districts, 117 were elementary districts (no grade higher than 8); 4 had grade ranges from PK, KG or first through grades 10 or 11; 4 served only the grades from 7 through 12. Of the unmatched elementary districts all but 7 had enrollments of less than 25 in every year; all of these low-enrollment elementary districts had closed by FY 2001, most of them much earlier. All but 9 of these low-enrollment elementary districts were in the three states of Montana, Nebraska, and North Dakota. The seven unmatched elementary districts with 25 or more students include 5 in Connecticut and Vermont that arrange to send their students to private institutions for secondary education; 1 in South Dakota serving schools on Indian reservations; and 1 in Illinois.

Aggregation of counts, revenues, and expenditures consisted merely of adding the corresponding values for the districts combined. Per pupil revenue and expenditure measures were obtained by computing the ratio of the combined total measures divided by the combined enrollments. Grade spans were aggregated by identifying the highest and lowest grades served by any of the districts in the combination.

3. Results

Overall statistics based on imputed and nonimputed data were computed as a check on the meaningfulness and utility of the information in the CCD longitudinal fiscal-nonfiscal district file. The results are shown in tables 11 through 20. In table 11, the trends in fiscal measures based on the longitudinal database, prior to imputing missing data, are displayed as unweighted averages of per pupil measures. Because these are average per pupil figures, they do not show the distortions that total revenue and expenditure figures would show as a result of the substantial missing data in 1991, 1993, and 1994.

Table 11. Average per pupil expenditures and revenues, before imputation, in dollars, for open districts, by measure and fiscal year

SOURCE: U.S. Department of Education, National Center for Education Statistics Common Core of Data (CCD), Longitudinal Fiscal-Nonfiscal Detail File, 1989-90 through 2001-02.

The files created in this project are intended for use in educational policy research. Because missing data have been imputed statistically for some districts, including appropriate random variation, these values should not be used for displaying revenues and expenditures of individual districts. They are appropriate for presentation of summary figures, such as means, variances, correlation coefficients, and regression coefficients.

B. Summary of data included in these files

1. General

The longitudinal school district detail finance data are provided in two files: a primary file (FNFD) and a 'unified' file (UFNFD). The primary file includes all 'regular' local education agencies; 'regular' here means schools districts whose primary purpose is providing the standard elementary/secondary curriculum in public schools. Charter school districts, districts that are primarily education service agencies, and districts focused on special, vocational, or alternative education have been excluded. The second, 'unified,' file is derived from the primary file. In this file, the data for linked elementary districts and secondary school district have been aggregated to create 'pseudo-unified' K-12 school districts with data comparable to other K-12 districts.

Table 21 summarizes the data elements in the regular data file. The fiscal and nonfiscal field names end with two digits, which indicate the fiscal year (indicated by 'yy' in table 21). Each fiscal measure is provided as both total dollars and a per pupil amount. The per pupil fields have the same name as the total dollar field but start with a 'P.' There is also an imputation field for

each fiscal and nonfiscal measure. The imputation flags have the name of the corresponding fiscal or nonfiscal measure, with an 'M' inserted before the two character year code. In those variable names with a '_', the '_' has been replaced with 'M.' Thus, the imputation indicator for TOTRV00 is TOTRVM00 and the imputation indicator for Z33_00 is Z33M00. The value in the imputation flag is either 'M' (imputed) or 'R' (as reported). Imputation flags for the per pupil fiscal measures are not included because they are exactly the same as the indicators for the total fiscal measures.

The unified file has 2,107 variables; these are the same variables as the primary file, with the following exceptions:

- The secondary LEAID (SECLEA), which identifies the secondary school district with which an elementary school district is linked has been dropped. (Since the unified file does not include the elementary school districts linked with secondary school districts, this field would have no values.)
- The low and high grade values for individual years (GSLOyy and GSHIyy) have been dropped and replaced with single low and high grade values for all the years of data (GSLO and GSHI).
- A Y/N flag (PSEUDO) has been added to indicate whether the district is a pseudo-unified district. (See section A in the introduction).
- A character string (IDSTRING) has been added for pseudo-unified districts. It contains the LEAIDs of the lower grade level districts that are included in the pseudo district. The pseudo-unified districts retain the LEAID of the secondary school district into which the data from the elementary school districts were aggregated.

Table 21 is only a summary. The complete file layouts are in appendixes A and B. The sample survey form in appendix F provides more detailed descriptions of the fiscal measures.

It is important to note that not all fiscal measures were collected in all years. The right-most column in table 21 indicates the years of availability for individual fields.

Although the data files include totals, subtotals, and detail items, there are only three variables for which all detail items are included. They are

- total revenues (TOTRVyy): the sum of federal revenues (FEDRVyy), state revenues (STREVyy), and local revenues (LOCRVyy);
- federal revenues (FEDRVyy): the sum of B10_yy, B11_yy, B12_yy, B13_yy, C14_yy, C15_yy, C16_yy, C17_yy, C18_yy, C19_yy, C20_yy, C25_yy, and C36_yy; and
- total current expenditures (CELSCyy): the sum of instructional expenditures (CINSTyy), support services expenditures (CSSVCyy), and expenditures for other elementary/secondary programs (COTHRyy).

Detail items are included for the following totals; however, they are *not* all the detail items that are needed to compute the total:

- State revenues (STREVyy): The specific state revenue sources that are included do not sum to the total of state revenues. The detailed state revenue items are available in the un-imputed, single-year, school district finance files (see section D).

User's Guide

- Total expenditures (TOTEXyy): There are additional components of total expenditures that are not included in these files.
- Support services expenditures (CSSVCyy): There is an additional category for unspecified support services expenditures that is not included in these files; the categories of support services that are included will not sum to the total.
- Current expenditure sub-categories (instruction and the support services). Expenditures for salaries and employee benefits within these sub-categories of current expenditures are included in this file. However, the total of expenditures for each of these categories includes other expenditures in addition to salaries and benefits; the sum of these two fields will not equal the total for the category.

2. Missing data

Missing values are indicated by a ‘.’ which is the normal indicator in SAS that a variable has a missing value. Values are missing in those years when a district was not active. Not all districts were active in all the years covered by the longitudinal files, and some that were active were not covered by the F-33 (see ‘Sample Use’ below). For those years where there was no original record for these districts, the revenue and expenditure fields were set to ‘.’ (missing) at the outset of the longitudinal imputation process. Fields that were not imputed (e.g., for the years after a district closed) retained the ‘.’ missing value.

A zero in an unimputed fiscal field may also indicate missing or not-applicable data. In these cases, the value was carried over from the source F-33 file, where missing data items are indicated as 0. In the data cycles prior to the 1999 fiscal year, it is not possible to determine whether a reported 0 represents *not applicable* or whether the data are expected but missing. Beginning with the 1999 fiscal year survey, flags have been added which give the data user more information about whether the data were reported, adjusted, or not expected. In the cases where a 0 represents *not applicable*, the district does not have that type of revenue or that type of expenditure. In small districts, staff and other costs may cross functions. For example, the principal of a school in a one-school LEA may serve as the LEA superintendent. In some cases, this person’s salary is only reported under LEA administration instead of allocated to both LEA administration and school administration functions.

3. Key variables

- *LEAID*: The LEAID uniquely identifies each record on these files. It is an identification code assigned by NCES to each LEA in the CCD data files. The LEAID has seven characters. These consist of a two-digit state code followed by a five-digit number that is unique to each agency within the state. The LEAID can be used to merge school district data from other sources onto these data files (see section D below).
- *Geographic Identifiers*: Several geographic identifiers have been included on these data files.
 - *Region Codes*: These files include a region code that divides the country into four parts by states: Northeast, Midwest, South, and West. See appendix A or B for detailed descriptions.
 - *State and county FIPS codes*: Federal Information Processing Standards (FIPS) provide standard codes for identifying specific geographic areas. These files include both state and county FIPS codes. These two fields must be concatenated to uniquely identify counties. Table 22 lists FIPS state codes together with state names and state abbreviations.
 - *Metropolitan Statistical Area code (CMSA)*: This six-digit field has two parts. The first two digits designate the consolidated metropolitan statistical area (MSA). This is '00' for MSAs, and nonzero digits for Primary Metropolitan Statistical Areas (PMSAs). The last four digits are the unique MSA or PMSA code. The field is all zeros for agencies not located in a metropolitan area. For a list of FIPS metro codes refer to the following website: <http://www.census.gov/population/estimates/metro-city/99mfips.txt> (metro).

SOURCE: U.S. Department of Commerce, National Institute of Standards and Technology, Computer Systems Laboratory. *Federal Information Processing Standards Publication 5-2, Codes for the Identification of the States, The District of Columbia and the Outlying Areas of the United States, and Associated Areas.* Gaithersburg, MD: 1970.

- *Agency Type Codes:* Four different agency type codes are included on these files. Each has a different origin and meaning. The particular values are listed in the record layouts (appendixes A and B). These codes are based on the latest year of data for each agency. Some agencies have been reclassified over time. The type codes are as follows:
 - *CCD_TYPE:* This is the type from the CCD Local Education Agency Universe data file. It describes the jurisdiction associated with the school district (e.g., local education agency, state, federal).
 - *F33_SCHLEV:* This is the school level variable from the annual School District Finance File (F-33). It indicates the level of schooling provided by the district as well as non-operating districts and education service agencies.
 - *GOVT_TYPE:* This is derived from the agency ID number used in the annual School District Finance File (F-33). It indicates whether a district has its own fund-raising authority, or is dependent on a parent government. For dependent districts, it indicates the level of government on which the district depends for funding.
 - *FINANCE_TYPE:* This typology was created particularly for these files. The district grade levels and populations served were used to divide districts into groups with similar financial requirements. See the section 'State by State Variations' below for further discussion of this typology.

C. Other Related Surveys

There is a wealth of data that can be merged with the fiscal-nonfiscal longitudinal files to expand their analytical potential.

Fields included in the earlier FNF and UFNF files but not in the FNFD and UFNFD files, can be obtained from either the imputed, longitudinal files, or the unimputed, annual files described below. (Imputed values are only available for the years 1989–90 through 1999–2000.) The excluded fields are:

- Enrollment counts by race/ethnicity
- Special education enrollment
- Counts of students eligible for school lunch programs
- District locale codes.

The common field used for merging these files is the NCES LEAID, which uniquely identifies school districts. Other district-level data files can be merged directly with the fiscal-nonfiscal files using LEAID. School-level data must first be aggregated to the district level before being merged. Appendix G of this documentation is a sample SAS program that demonstrates how data can be aggregated from the school file and merged with the fiscal/nonfiscal data file. Appendix H is a sample SPSS program that accomplishes the same thing. Additional help is available from the National Education Data Resource Center (<http://nces.ed.gov/partners/nedrc.asp>).

The data files that provide additional school and district data are listed below.

- The CCD is a comprehensive, annual, national statistical database of information concerning all public elementary and secondary schools and school districts. The CCD has five components: Public School Universe, Local Education Agency (School District) Universe, State Nonfiscal, National Public Education Finance Survey (NPEFS), and F-33 surveys. All CCD data are provided by the SEAs and are edited by the Census Bureau. Single-year, un-imputed CCD data files are available online at <http://nces.ed.gov/ccd/ccddata.asp>. Data can also be browsed and downloaded using the CCD Build-a-Table tool, online at <http://nces.ed.gov/ccd/bat/>.
 - The public school universe data include general information about the school; the full-time equivalent count of teachers; and enrollment by grade, race/ethnicity and gender. The school data can be aggregated to the district level and merged with the fiscal-nonfiscal files using the LEAID.
 - The local education agency data are the source for many of the identifier variables and the nonfiscal measures included in the fiscal-nonfiscal files. Additional data on the annual agency files include: agency characteristics; counts of students in special programs (e.g., special education, migrant students, school lunch programs); staff counts; counts of high school completers and dropouts (not in all years).
 - The school district finance files (F-33) are the source of the finance measures in the fiscal-nonfiscal data files. The single-year, un-imputed data files include detail items that were not included in the longitudinal data files.
 - The NPEFS survey collects state totals of school finance data. NPEFS data represent the total spending on public elementary and secondary education for states and the nation, and are used in determining state funding allocations for a number of federal education programs, including those authorized by Title I of the Elementary and Secondary Education Act of 1965. NPEFS is administered separately from the F-33 survey. It includes expenditures for special state-run schools and charter schools that may not be included in the F-33. For this reason, the F-33 data do not necessarily aggregate to the totals reported in NPEFS.
 - The State Nonfiscal data include enrollment, staff counts and counts of high school completers.
- The Longitudinal Nonfiscal Research files were created before the fiscal-nonfiscal data files, using similar methodology. These files link local school and school districts over time and provide imputed values for data that were not originally reported by states. The 1998 version adds free/reduced price eligibility data to the school file and high school diploma recipients and other high school completers, by race and gender, to the school district file. They are available online at <http://nces.ed.gov/ccd/CCD13YR.ASP>.
- The NCES Longitudinal School District Fiscal-Nonfiscal (FNF) File, Fiscal Years 1990 to 2000, includes imputed nonfiscal measures that are not included in the detail FNF. These data include: enrollment counts by race/ethnicity, special education enrollment, counts of students eligible for school lunch programs, and district locale codes. This file can be downloaded from <http://nces.ed.gov/edfin/links/findata.asp>.
- The Small Area Income and Poverty Estimates (SAIPE) files contain estimates of school-age children living in poverty within school districts. Data are available for 1995, 1997 and

every year starting with 1999. The files can be downloaded from the Census website at: <http://www.census.gov/hhes/www/saife/tables.html>.

- Decennial Census data have also been mapped to school districts. These data can be browsed and downloaded from the NCES School District Demographic website at: <http://nces.ed.gov/surveys/sdds/disclaimer.asp?t=c2000d.asp>.

D. Changes to the F-33 Survey 1990 to 2002

Changes across survey cycles in methodology, survey format and reporting, and unit identifiers are detailed in the following notes. This information may be important to the user planning longitudinal analysis.

Sample Use

Prior to fiscal year 1995, every F-33 survey was a sample survey except those years ending in 0, 2, and 7. Beginning with fiscal year 1995, data were collected and processed for every LEA. Such reporting constitutes a universe survey. In fiscal years 1991, 1993, and 1994 only sample data were submitted by some states. Table 23 below illustrates which states have sample data on the F-33 file for these years (all other states have universe data in those years). The longitudinal school district finance files have imputed data for these years.

Table 23. Counts of school districts in sample and universe years of the School District Finance Survey (Form F-33), various years for sampled states, by state and year

State	1990–1991 (sampled year)	1991–1992 (universe year)	1992–1993 (sampled year)	1993–1994 (sampled year)

E. Issues for Researchers

1. Effects of enrollment changes on per pupil statistics

It is important for researchers to bear in mind that per pupil revenue and expenditure values are easily skewed in the short term by dramatic changes in enrollment. When a district undergoes a dramatic change in enrollment (beyond doubling or halving), expenditures can be expected to change in the same direction, but they do not change instantaneously. When enrollments contract, teachers, paid the same amount, teach smaller classes, while the LEA figures out how to rearrange teaching loads (and reduce the staff). When enrollments expand rapidly, teachers have fuller

classrooms until more teachers can be hired and more classrooms built. In the first case, expenditures per pupil rise during the imbalance, and in the second case, they fall. This is visible when looking at per pupil amounts longitudinally. For example, in table 24 shows that the Kelton, Texas school district (LEAID = 4825290) experienced declining membership during the 1990s.

Table 24. Kelton school district's yearly membership and elementary/secondary expenditure data

Fiscal year	Total elementary/secondary expenditures	Membership	Per pupil elementary/secondary expenditures
1990	\$698,000	72	\$9,694
1991	718,000	51	14,078
1992	705,000	60	11,750
1993	647,000	55	11,764
1994	762,000	62	12,290
1995	740,000	65	11,385
1996	512,000	41	12,488
1997	501,000	36	13,917
1998	586,000	44	13,318
1999	544,000	41	13,268
2000	601,000	10	60,100

SOURCE: U.S. Department of Education, The NCES Common Core of Data (CCD), "Longitudinal Fiscal-Nonfiscal Detail File," 1989-90 through 2001-02.

Its low membership resulted in a high per pupil elementary/secondary expenditure rate (over \$11,000 for most of the 1990s), but when their membership dropped from 41 in 1998–99 to 10 in 1999–2000, this per pupil measure jumped from \$13,268 to \$60,100.

2. Outlier values

There are 405 records on the detail longitudinal Fiscal-Nonfiscal (FNFD) with a value for current elementary and secondary expenditures per pupil in 1 year that have been defined as an outlier. The value is considered an outlier if it is more than 3 standard deviations from the mean of the other years for that LEA (standard deviation defined on the others) and different by a factor of 1.5 (in either direction). For example, the Divide Independent School District in Texas has an outlier value for current per pupil expenditures in FY 1990. In that year these expenditures were \$84,333, compared to a mean of \$8,857 in the other years. For the last year of data, due to the fact of increasing trends, an additional qualification was imposed that the value be different from the preceding year by a factor of more than 1.5. Only LEAs with at least 4 years of data were labeled outliers, because it is questionable to define an outlier year with only 3 or fewer years of data. Most of the LEAs with outlier values have 11 years of data. These records have been flagged (OUTLIER = 'yy' where 'yy' indicates the fiscal year of the outlier value) to assist researchers in identifying districts with interesting data, perhaps worthy of a substantive school finance study.

It is important to understand that a value being an 'outlier' does not mean it is necessarily incorrect. Generally speaking, outliers either occur here because: (a) something qualitatively unusual occurred in the LEA or (b) there was a reporting error. While we hope to have removed a large portion of the reporting errors through editing and imputation, we have tried even harder to avoid removing any of the true outliers, which result from real phenomenon.

User's Guide

With that in mind, tables 25, 26, and 27 provide more specifics on these outlier values. They include the outlier value, the mean of the value in other years and the difference between the outlier value and the mean. Also included is the enrollment for the outlier year and the mean of the enrollment in other years. The last column is a measure of the degree to which the variation in the expenditure value is related to the variation in membership. It is the difference between the ratio of the expenditure outlier value to the expenditure mean, and the ratio of the mean of the enrollment in the nonoutlier years to the enrollment in the outlier year. So, for example, the difference between these ratios for the district shown in the ninth row of table 25 (LEAID = 4012450) is 0.1 $((41,083 / 18,049) - (26 / 12))$ indicating that most of the increase in per pupil expenditures for that year is due to the drop in enrollment. At the other extreme, the ratio difference for the first LEA in this table is 7.5, reflecting the fact that although enrollment in the outlier year was only half the mean of other years, the per pupil expenditures are almost ten times the mean of other years; the change in enrollment does not explain the high per pupil expenditures.

Table 25 lists the 20 cases (of the 405) with the highest outlier values; table 26 lists the 20 cases with the highest enrollments; table 27 lists the 20 cases (in descending order) with the greatest difference between the expenditure outlier/mean ratio and enrollment mean/outlier ratio, i.e., those outliers least likely to be explained by changes in enrollment are at the top of the table.

Table 25. The 20 school districts with the highest outlier values for current elementary and secondary expenditures per pupil

LEAID	Year of outlier value for current elementary and secondary expenditures per pupil	Year of outlier value for current elementary and secondary expenditures per pupil ¹	Outlier Value for current elementary and secondary expenditures per pupil	Mean of value in other years	Difference between outlier value and mean in other years	Enrollment in outlier year	Mean of enrollment in other years	Difference between expenditure outlier/mean ratio and enrollment mean/outlier ratio

3. State-by-state variations

The administrative structure of public education varies greatly from state to state. This issue was raised in the discussion on the selection of districts in the methodology section above. The simplest administrative structure is in Hawaii, where a single school district covers the entire state. In many of the southern states, the tendency is for county-level school districts to have comprehensive responsibility for K–12 public education. Districts in the northeast are more likely to be organized at the city, town, or township level. This is the pattern in New Jersey, where township-level districts are supplemented by county-level districts that are responsible for special education and vocational education. In some states (Indiana, Maine, Nebraska, Ohio, Vermont, and New Hampshire) some or all of the districts are organized into supervisory unions with a shared administrative center. Boards of Cooperative Educational Services (BOCES) serve similar functions in New York and Colorado. Charter schools in many states are set up as separate school districts. Identification of these charter school districts has been problematic in both the CCD and

User's Guide

F-33 data collections. Other school districts include those run by states' departments of corrections, state-run schools for the deaf and blind, 'cooperatives,' and residential schools (Alaska and Wyoming). There are also 'nonoperative' districts. These districts have their own financing, but do not maintain their own schools. Instead they pay 'tuition' to neighboring districts where they send their students.

The 'FINANCE_TYPE' created for these files is intended to distinguish these various district types. The types distinguished by this variable are as follows.

- RG = Regular LEA – full grade range
- MB = Elementary LEA linked to Secondary LEA
- OR = Other Regular – w/o full grade range
- CH= Charter School district
- PD = Pseudo – Secondary LEA linked with one or more Elementary LEAs
- ES = Educational Service Agency
- SE = Special Education Agency
- VE = Vocational Education Agency
- UK = Unknown Type
- OS = Out of Scope for F33
- NO = Nonoperating district

The agencies included in these files were limited to 'standard' school districts (i.e., 'RG,' 'MB,' 'OR,' and 'PD' in the list above). Service agencies('ES'), specialized agencies ('SE,' and 'VE'), unclassified('UK'), out-of-scope ('OS'), non-operating districts ('NO'), and charter school districts ('CH') were excluded. Table 28 on the next page shows the number of these nonstandard districts by state and specific type for the 1999–2000 school year.

User's Guide

Table 28. Distribution of nonregular districts, by state and type: School year 1999–2000

State	Total non-standard agencies	Education service agencies				Charter school districts	Out-of-scope

4. Null values

During the period covered by these files, many new districts were formed and many old ones were closed. Since many districts were not active in all years, many of the revenue and expenditure values are zero or missing. Table 29 is a count of districts with zero or missing values for per pupil current elementary and secondary expenditures.

Table 29. Number of records with zero or missing values for per pupil current elementary and secondary expenditures, by fiscal year

Fiscal year	1990	1991	1992	1993	1994	1995	1996	1997	1998	1999	2000	2001	2002

F. File formats and file names

Data presented in this release are available in one file format—SAS data sets (.sas7bdat).

The names of those data sets are:

- DetailFNF.sas7bdat (SAS - F-33 data for School Year 1989–2002, FY 1990–2002);
- DetailUFNF.sas7bdat (SAS - F-33 data for School Year 1989–2002, FY 1990–2002);

Complete information on layout (variable name, data type—alpha or numeric, and variable description) can be found in appendixes A and B.

Finance data included in these files are presented in whole dollar amounts.

Appendix C–Glossary
Longitudinal Fiscal-Nonfiscal Detail File: 1989-90 to 1999-2002

This glossary applies to the school district financial survey. When applicable, corresponding F-33 variables are listed in brackets. For additional detail, it is suggested that the data user consult the NCES Handbook: *Financial Accounting for Local and State School Systems*.

CENTRAL CITY. The largest city of a Metropolitan Statistical Area or a Consolidated Metropolitan Statistical Area, plus additional cities that meet specified statistical criteria. (See also ‘Locale Code.’)

CHARTER SCHOOLS. Charter schools are public schools that are exempted from significant state or local rules that normally govern the operation and management of public schools. A charter school is created by a developer as a public school, or is adapted by a developer from an existing public school. It operates in pursuit of a specific set of education objectives determined by the school’s developer and agreed to by the public chartering agency and provides a program of elementary or secondary education, or both. It meets all applicable federal, state, and local health and safety requirements; complies with federal civil rights laws and operates in accordance with state law. Charter schools may be affiliated with a regular school district, or they may be self-governing entities.

CONSOLIDATED METROPOLITAN STATISTICAL AREA (CMSA). If an area that qualifies as a metropolitan area (MA) has more than one million people, two or more primary metropolitan statistical areas (PMSAs) may be defined within it. Each PMSA consists of a large urbanized county or cluster of counties (cities and towns in New England) that demonstrate very strong internal economic and social links, in addition to close ties to other portions of the larger area. When PMSAs are established, the larger MA of which they are component parts is designated a consolidated metropolitan statistical area (CMSA). CMSAs and PMSAs are established only where local governments favor such designations for a large MA.

CURRENT OPERATION. Direct expenditure for salaries, employee benefits, purchased property and other services, and supplies. It includes gross school expenditures for instruction, support services, and noninstructional functions. It excludes expenditures for debt service, capital outlay, and reimbursement to other governments (including other governments / school systems). Also excluded are payments made on behalf of the school systems by other governments including employee retirement payments made by state governments to state retirement funds and to social security. Employer contributions made by those few school systems that have their own retirement system/funds are excluded.

CURRENT SPENDING. Comprises current operation expenditures (see above), payments made by the state on behalf of school systems, and transfers made by school systems into their own retirement funds. This expenditure type is useful in interstate comparisons. While expenditures made by the state on behalf of the school systems are available on a state aggregate basis, they are frequently not available for each school system in a given state. [F-33 variable TCURELSC]

EDUCATION AGENCY. A government agency administratively responsible for providing public elementary and/or secondary instruction or educational support services.

Appendix C–Glossary
Longitudinal Fiscal-Nonfiscal Detail File: 1989-90 to 1999-2002

ELEMENTARY. A general level of instruction classified by state and local practice as elementary, composed of any span of grades not above grade 8; preschool or kindergarten included only if it is an integral part of an elementary school or a regularly established school system.

ELEMENTARY/SECONDARY EDUCATION. Programs providing instruction, or assisting in providing instruction, for students in prekindergarten, kindergarten, grades 1 through 12, and ungraded programs.

ENROLLMENT. Count of pupils on pupil rolls in the fall of the school system’s fiscal year. The term ‘membership’ can also be used in place of ‘enrollment.’ **[F-33 variable V33]**

EXPENDITURE. All amounts of money paid out by a school system, net of recoveries and other correcting transactions, other than for retirement of debt, purchase of securities, extension of loans and agency transactions. Expenditure includes only external transactions of a school system and excludes noncash transactions such as the provision of perquisites or other payments in-kind.

FEDERALLY-OPERATED EDUCATION AGENCY. A federally-operated agency that is charged, at least in part, with providing elementary and/or secondary instruction or support services.

FEDERAL REVENUE (DIRECT). Aid from project grants for programs such as Impact Aid (PL 81-815 and PL 81-874), Indian Education, Bilingual Education, Head Start, Follow Through, Magnet Schools, Dropout Demonstration Assistance, and Gifted / Talented. **[F-33 variables B10, B11, B12, B13]**

FEDERAL REVENUE DISTRIBUTED BY STATE GOVERNMENTS. Aid from formula grants distributed through State government agencies. This includes revenue from such programs as:

FISCAL YEAR. The 12-month period to which the annual operating budget applies. At the end of the fiscal year, the agency determines its financial condition and the results of its operations.

FREE LUNCH PROGRAM. A program under the National School Lunch Act that provides cash subsidies for free lunches to students based on family size and income criteria.

FULL-TIME EQUIVALENCY (FTE). The amount of time required to perform an assignment stated as a proportion of a full-time position, and computed by dividing the amount of time employed by the time normally required for a full-time position.

INSTRUCTION EXPENDITURE. Relates to the instruction function (series 1000) defined in *Financial Accounting for Local and State School Systems* (National Center for Education Statistics, 1990). Instruction presented under the current operation or current spending headings includes payments from all funds for salaries, employee benefits (paid only by school system if under ‘current operation’ or paid by both school and state if under ‘current spending’), supplies, materials, and contractual services. It excludes capital outlay, debt service, and interfund transfers. Instruction covers regular, special, and vocational programs offered in both the regular

Appendix C–Glossary
Longitudinal Fiscal-Nonfiscal Detail File: 1989-90 to 1999-2002

school year and summer school. It excludes instructional support activities as well as adult education and community services. **[F-33 variables Z33, V10, E13]**

LARGE CITY. A central city of a CMSA or MSA, with the city having a population greater than or equal to 250,000. Prior to 1994–95, ‘Large City’ was defined as a central city of a metropolitan area with a population of 400,000 or more, or a population density of at least 6,000 people per square mile. (See also ‘Locale Code.’)

LARGE TOWN. An incorporated place or Census Designated Place (CDP) with a population greater than or equal to 25,000 and located outside a CMSA or MSA. (See also ‘Locale Code.’)

LEA. Local Education Agency, often called school districts, an education agency at the local level whose primary responsibility is to operate public schools or to contract for public school services.

LOCALE CODE. Locale code is defined based on how the school is situated in a particular location relative to populous areas, based on the school’s address. (See also, ‘Large City,’ ‘Mid-size City,’ ‘Urban Fringe of Large City,’ ‘Urban Fringe of Mid-Size City,’ ‘Large Town,’ ‘Small Town,’ ‘Rural, outside MSA,’ and ‘Rural, inside MSA.’)

LOCAL REVENUE. Revenue raised within the boundaries of the LEA. These revenues are primarily raised through property taxes, but also come from other types of taxes and fees. **[TLOCRED sum of: A07, A08, A09, A11, A13, A15, A20, C24, D11, D23, T02, T06, T09, T15, T40, T99, U22, and U97].**

Metropolitan Statistical Area (MSA). An area consisting of one or more contiguous counties (cities and towns in New England) that contain a core area with a large population nucleus, as well as adjacent communities having a high degree of economic and social integration with that core. An area is defined as an MSA if: it is the only MSA in the immediate area and it has a city of at least 50,000 population; or it is an urbanized area of at least 50,000 with a total metropolitan population of at least 100,000 (75,000 in New England).

MID-SIZE CITY. A central city of a CMSA or MSA, with the city having a population less than 250,000. Prior to 1994–95, term was defined as a central city of a metropolitan area with a population less than 400,000 and a population density less than 6,000 people per square mile. (See also ‘Locale Code.’)

NCES. National Center for Education Statistics, an organization within the U.S. Department of Education. NCES is the primary federal entity for collecting, analyzing, and reporting data related to education.

NONELEMENTARY/SECONDARY CURRENT SPENDING. Current spending for nonelementary/secondary education programs. Included in this category are community services, adult education, and other nonelementary/secondary current expenditures. **[F-33 variables V70, V75, V80]**

PRIMARY METROPOLITAN STATISTICAL AREA (PMSA). If an area meets the requirements to qualify as a MSA and has a population of 1,000,000 or more, one or more

Appendix C–Glossary
Longitudinal Fiscal-Nonfiscal Detail File: 1989-90 to 1999-2002

PMSAs may be defined within it if statistical criteria are met and local opinion also is in favor. A PMSA consists of a large urbanized county, or a cluster of such counties (cities and towns in New England) that have substantial commuting interchange. When one or more PMSAs have been recognized, the larger area of which they are component parts then is designated a CMSA.

PUBLIC SCHOOL. An institution that provides educational services and has one or more grade groups (PK–12), or which is ungraded; has one or more teachers to give instruction; is located in one or more buildings; has an assigned administrator; receives public funds as primary support; and is operated by an education agency.

REDUCED-PRICE LUNCH STUDENT. A student who is eligible to participate in the Reduced-Price Lunch Program under the National School Lunch Act. (See also, ‘Free Lunch Eligible.’)

RURAL. Any incorporated place, Census designated place, or nonplace territory not defined by the Census Bureau as an urbanized area or urban cluster. From 1998–99 onward, the category was separated into ‘Rural, Inside MSA’ and ‘Rural, Outside MSA.’

RURAL, INSIDE MSA. Any incorporated place, Census designated place, or nonplace territory within a CMSA or MSA and defined as rural by the Census Bureau. Category represents a subset of ‘Rural,’ and was introduced in 1998–99. (See also ‘Locale Code.’)

RURAL, OUTSIDE MSA. Any incorporated place, Census designated place, or nonplace territory not within a CMSA or MSA and defined as rural by the Census Bureau. Category represents a subset of ‘Rural,’ and was introduced in 1998–99. (See also ‘Locale Code.’)

PUBLIC SCHOOL SYSTEMS. Includes independent school district governments and dependent school systems. Independent school district governments are organized local entities providing public elementary, secondary, special, and vocational/technical education. Dependent school systems are classified as sub-units of some other governmental unit such as a county, municipality, township, or the state.

REVENUE. All amounts of money received by a school system from external sources, or net of refunds and other correcting transactions other than from issuance of debt, liquidation of investments, or as agency and private trust transactions. Revenue excludes noncash transactions such as receipt of services, commodities, or other ‘receipts in-kind.’

SEA. State Education Agency, the agency of the state charged with primary responsibility for coordinating and supervising public instruction.

SMALL TOWN. An incorporated place or Census Designated Place (CDP) with population less than 25,000 and greater than or equal to 2,500 and located outside a CMSA or MSA. (See also ‘Locale Code.’)

STATE REVENUE. State revenue paid to the school system for any purpose, restricted or unrestricted, including the following:

STUDENT MEMBERSHIP. This comprises the total student enrollment on October 1 (or the closest school day to October 1) for all grade levels (including prekindergarten and kindergarten)

Appendix C–Glossary
Longitudinal Fiscal-Nonfiscal Detail File: 1989-90 to 1999-2002

and ungraded pupils. Membership includes students both present and absent on the measurement day.

SUPPORT SERVICES EXPENDITURE. Relates to support services functions (series 2000) defined in *Financial Accounting for Local and State School Systems* (National Center for Education Statistics, 1990). Support services presented under the current operation or current spending headings includes payments from all funds for salaries, employee benefits (paid only by school systems if under ‘current operation’ or paid by both school and state if under ‘current spending’), supplies, materials, and contractual services. It excludes capital outlay, debt service, and interfund transfers. The functional categories for support services expenditures include pupils, instructional staff, general administration, school administration, operation and maintenance of plant, student transportation, and business/central/other support services.

NONSPECIFIED SUPPORT SERVICES. Expenditures which pertain to more than one of the above categories. In some cases reporting units could not provide distinct expenditure amounts for each support services category. These expenditures were included in ‘nonspecified’ instead of ‘other support services.’ [F-33 variable V85]

TOTAL EXPENDITURE. Total expenditure is the sum of current expenditures, capital outlay, intergovernmental expenditures (i.e. payments to other state and local governments and other school systems), and debt service expenditures. [F-33 variable **TOTALEXP** (total expenditure) is the sum of: **TCURELSC**, **TNONELSE**, **TCAPOUT**, **L12**, **M12**, **Q11**, and **I86**. Component variables may differ in surveys of fiscal years preceding 1992.]

TOTAL REVENUE. The sum of compulsory revenue contributions emerging from local, state, and federal sources. [F-33 variable **TOTALREV** (Total revenue) is the composite variable and **TFEDREV**, **TSTREV**, and **TLOCREV**.]

URBAN FRINGE. A closely settled area, contiguous to a central city, outside a central city; with a minimum population of 2,500 inhabitants; with a population density of at least 1,000 per square mile; and has a Census Urbanized Area Code. (See also ‘Locale Code.’)

URBAN FRINGE OF A LARGE CITY. Any incorporated place, Census designated place, or nonplace territory within a CMSA or MSA of a ‘Large City’ and defined as urban by the Census Bureau. Prior to 1994–95, defined as any incorporated place, Census designated place, or nonplace territory within a CMSA or MSA and defined as urban by the Census Bureau, with a central city with a population of 4000,000 or more or a population density of at least 6,000 people per square mile. (See also ‘Locale Code.’)

URBAN FRINGE OF A MID-SIZE CITY. Any incorporated place, Census Designated Place (CDP), or nonplace territory within a CMSA or MSA of a Mid-size City and defined as urban by the Census Bureau. Prior to 1994–95, defined as any incorporated place, Census designated place, or nonplace territory within a CMSA or MSA and defined as urban by the Census Bureau, with a central city with a population less than 4000,000 or a population density less than 6,000 people per square mile. (See also ‘Locale Code.’)

FAX to ESES Branch at 301-457-1540

**2002 CENSUS OF GOVERNMENTS
SURVEY OF LOCAL GOVERNMENT FINANCES
School Systems**

In correspondence pertaining to this report, please refer to the Census File Number above your address.

(Please correct any error in name, address, and ZIP Code)

Please note that this is a national form that applies to governments with wide differences in the size of their service areas, the amount of population served, and the extent and complexity of their financial accounts. This form has been approved by the Office of Management and Budget (OMB) and has been given the number 0607-0700. Please note that we have displayed this number in the upper right hand corner of this form. Display of this number confirms that we have approval from OMB to conduct this survey. If this number was not displayed, we could not request your participation in this survey. We estimate public reporting burden for this collection of information to vary from 1.5 to 2.5 hours per response, with an average of 2 hours per response, including time for reviewing instructions, searching existing data sources, gathering and maintaining data needed, and completing and reviewing the collection of information. Send comments regarding the burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden, to: Paperwork Project 0607-0700, U.S. Census Bureau, 4700 Silver Hill Road, Stop 1500, Washington, D.C. 20233-1500. You may e-mail comments to Paperwork@census.gov; use "Paperwork Project 0607-0700" as the subject.

NOTE → *Please read the instructions on pages 6 through 8 before completing this form.*

Reference numbers pertain to revenue, expenditure function and object codes contained in **Financial Accounting for Local and State School Systems**, National Center for Education Statistics, 1990.

Part I REVENUE	Amount Omit cents
Section A – FROM LOCAL SOURCES	T06
1. Property taxes (1110, 1140)	
2. General sales or gross receipts tax (1120)	T09
3. Public utility taxes (1190)	T15
4. Individual and corporate income taxes (1130)	T40
5. All other taxes (1190)	T99
6. Parent government contributions (dependent school systems only – 1200)	T02
7. Revenue from cities and counties (1200, 1960, 2100, 2200, 2800)	D23
8. Revenue from other school systems (within state – 1320, 1420, 1951; out of state – 1330, 1430, 1952)	D11
9. Tuition fees from pupils and parents (1310, 1340)	A07
10. Transportation fees from pupils and parents (1410, 1440)	A08
11. Textbook sales and rentals (1940)	A11
12. School lunch revenues (1600)	A09
13. Student activity receipts (1700)	A13

Part I REVENUE – Continued	Amount Omit cents
▶ Section A – FROM LOCAL SOURCES – Continued	A20
14. Other sales and service revenues (1800)	U22
15. Interest earnings (1500)	U97
16. Miscellaneous other local revenue (1910, 1920, 1930, 1980, 1990)	
▶ Section B – FROM STATE SOURCES (3100, 3200, 3800)	C01
1. General formula assistance	C04
2. Staff improvement programs	C05
3. Special education programs	C06
4. Compensatory and basic skills attainment programs	C07
5. Bilingual education programs	C08
6. Gifted and talented programs	C09
7. Vocational education programs	C10
8. School lunch programs	C11
9. Capital outlay and debt service programs	C12
10. Transportation programs	C13
11. All other revenues from state sources	C14
▶ Section C – FROM FEDERAL SOURCES THROUGH THE STATE GOVERNMENT (4200, 4500)	C14
1. Title I	C15
2. Children with disabilities – IDEA	C16
3. Eisenhower math and science	C17
4. Drug free schools	C18
5. Title VI	C19
6. Vocational and technical education	C25
7. Child nutrition act – exclude commodities	C20
8. All other federal aid through the state	
▶ Section D – FROM FEDERAL SOURCES DIRECTLY (4100, 4300, 4700, 4800)	B10
1. Impact aid (P.L. 815 and 874)	B11
2. Bilingual education	B12
3. Indian education	B13
4. All other direct federal aid

BASIC INSTRUCTIONS AND SUGGESTIONS

FINALLY AUDITED FIGURES ARE UNNECESSARY. If substantially accurate figures can be supplied on a preliminary basis, please do not delay submitting this report.

1. INCLUDE the unduplicated revenues and expenditures from all funds.

- | | |
|---------------------------|---------------------------|
| a. General fund | e. Capital projects funds |
| b. Special revenue funds | f. Food service fund |
| c. Federal projects funds | g. Student activity funds |
| d. Debt service fund | |

2. EXCLUDE transfers of monies between funds, agency transactions, transactions of private trust funds, purchase of commodities, and purchase of securities for investment purposes.

3. Please describe in the "Remarks" section the basis of any estimates or prorations used to report amounts requested on this form.

4. Please report "0" in cases of revenues not received, no expenditures made, or no debt or assets. Report "M" if there are values for these items but they cannot be determined because they are missing from your records.

5. Contact the Elementary-Secondary Education Statistics Branch, U.S. Census Bureau at 1-800-622-6193 for help with questions.

Part I – REVENUE

Section A – FROM LOCAL SOURCES

Lines 1–5. Independent school districts should report their tax receipts here. Line 1 (property taxes) will be applicable to most independent school districts. Lines 2 through 5 will be applicable to only a relatively small number of districts. Taxes reported here should be those which the district has the power to levy. State taxes and state property tax relief payments should be excluded here and reported instead in section B. Include current and delinquent tax revenues and penalties.

Line 6. Dependent school systems should report their tax receipts and any other amounts appropriated by their parent government on line 6 (Census code T02).

Line 7. Report taxes for education levied by separate county and city governments and transferred to the school system. Include debt issued in the name of a local (nonschool system) government and transferred to the school system. Regional school systems should report assessments received from cities and towns here. Assessments received from independent school districts should be reported on line 8.

Line 8. Report payments received from other school systems, both within and outside the state, for tuition, transportation, and other services (such as purchasing and data processing). Regional school systems should report assessments received from independent school districts here. Assessments received from cities and towns should be reported on line 7.

Lines 9–14. Report all student fees on these lines. Gross receipts from sale of school breakfasts, lunches, and milk (from students, teachers, adults, but not from state or federal funds) should be entered in item 12. Gross student activity receipts for those funds under control of the custodian of school funds should be included on line 13. Revenues from other sales and services, including community services activities should be entered on line 14. Report in Part IX the amount of any student fee that cannot be reported because the fee covers more than one of the items on lines 9 through 14, such as lump sum fees for both tuition and transportation.

Line 15. Include interest earnings from all funds held by the school system.

Line 16. Report receipts from rentals, property sales, private contributions, and refunds from prior year expenditures.

Section B – FROM STATE SOURCES

Include all state payments made directly to the local education agency. Exclude state payments made on behalf of the local education agency and report instead in Part V.

Line 1. Include revenue from general noncategorical state assistance programs such as foundation, minimum or basic formula support, principal apportionment, equalization, flat or block grants, and state public school fund distributions. Also include state revenue dedicated from major state taxes, such as income and sales taxes. Revenues from minor state taxes should be included on line 11.

Line 2. Report revenues from programs designed to improve the quality and quantity of local education agency staff. Examples include additional teacher units, teacher benefits, retirement and social security paid directly to local education agencies, mentor teachers, teacher induction, staff development contracts and stipends, career ladder contracts, in-service training, health insurance, principal leadership, teacher quality contracts, and salaries for specific types of instructional and support staff (other than for staff directly associated with the programs described on lines 3 through 10).

Line 3. Enter revenues for the education of physically and mentally handicapped students.

Line 4. Include revenues from state compensatory education for "at risk" or other economically disadvantaged students, including migratory children (unless bilingual – see line 5) and orphans. Also include amounts from state programs directed toward the attainment of basic skills. Include categorical education excellence and quality education programs which provide more than staff enhancements – such as materials, resource centers, and equipment. Programs which focus on staff should be reported on line 2.

Lines 5–10. Enter state revenues for the type of program indicated. Include career education programs on line 7; school lunch matching payments on line 8; school construction, building aid, and interest and principal payments on line 9; and bus driver salaries and bus replacements on line 10.

Line 11. Report amounts for specific programs not described above on lines 1 through 10 including instructional materials, textbooks, computer equipment, library resources, guidance and psychological services, driver education, energy conservation, enrollment increases and losses, health, alcohol and drug abuse, AIDS, child abuse, summer school, prekindergarten and early childhood, adult education (excluding vocational), desegregation, private schools, safety and law enforcement, and community services.

Also include on line 11 those items financed by relatively minor state taxes, licenses, fees, and funds such as severance and license taxes, timber and motor vehicle excise taxes, payments in lieu of taxes, refunds, land reimbursement, and forest funds.

Report in Part IX the amount of any state revenue item that cannot be reported because the item covers more than one of the items on lines 1 through 11, such as "total state revenues" not broken down by program.

Section C – FROM FEDERAL SOURCES THROUGH THE STATE GOVERNMENT

Line 1. Include federal revenues distributed through Title I of the Elementary-Secondary Education Act (ESEA), as reauthorized by Improving America's Schools Act (IASA). Report basic, concentration, and migratory education grants.

Line 2. Report federal revenues awarded under the Individuals with Disabilities Education Act (IDEA 97). Include formula grants authorized in Part B of this legislation. Exclude project grants authorized in Part D. Report these project grants instead in Part I-D4.

Line 3. Report math and science formula grants authorized by Title II-A and B and Title XIII-C of the Elementary-Secondary Education Act, as reauthorized by IASA.

Line 4. Include formula and project grants for drug free schools authorized by the Elementary-Secondary Education Act, Title IV, as reauthorized by IASA.

Line 5. Enter Title VI grants sanctioned by the Elementary-Secondary Education Act, as reauthorized by IASA.

Line 6. Report formula grants authorized by the Carl D. Perkins Vocational Education Act. Include revenues from Title II (Basic Grants), and Title III-E (Tech-Prep Education).

Line 7. Include revenues from Child Nutrition Act programs (national school lunch, special milk, school breakfast and ala carte) sanctioned by P.L. 79-396 and P.L. 89-642. **Report cash payments only -- Exclude the value of donated commodities.**

Line 8. Enter the total of all other federal funds disbursed through the state to the local education agency. Include formula grants authorized by the Adult Education Act (Part B).

Section D – FROM FEDERAL SOURCES DIRECTLY

Line 1. Include federal payments for construction (P.L. 81-815) and for maintenance and operation (P.L. 81-874).

Line 2. Include project grants for bilingual education authorized by Title VII of the Elementary-Secondary Education Act, as reauthorized by IASA.

Line 3. Include both project and formula grants for Indian education authorized by the Elementary-Secondary Education Act, Title IX, as reauthorized by IASA, and the Johnson - O'Malley Act.

Line 4. Report the total of all other federal grants awarded directly to the local education agency. Include project grants for Handicapped Education (see instructions for Part I-C2), Head Start, Magnet Schools, and Gifted and Talented.

Report in Part IX the amount of any federal revenue item that cannot be reported because the item covers more than one of the items in Part IC1-8 and ID1-4, such as "total federal revenues" not broken down by program.

Part II – CURRENT OPERATION EXPENDITURE

Include for the functions shown on lines 1 through 14 expenditures for salaries and wages only (column (1)), employee benefits only (column (2)), and all current operation expenditure (column (3)). **Column (3) totals should include amounts entered in columns (1) and (2).** Additionally, column (3) totals should include such objects as contracts, rent, insurance, utilities, maintenance services, printing, tuition paid to private schools, purchase of food, supplies, and materials.

Exclude from Part II	Include instead in:
Capital outlay expenditures	Part III
Payments to other school systems	Part IV, item 3
Payments to the state, cities, counties, or special districts	Part IV, items 4 and 5
Debt service payments	Part IV, item 6 and Part VIA3
State payments on behalf of school systems	Part IX, items 6–14

Also exclude inter-fund transfers and the purchase of stocks, bonds, securities, and other investment assets.

Handbook references pertain to function codes contained in Financial Accounting for Local and State School Systems, National Center for Education Statistics, 1990.

Section A – Elementary-secondary Education Instructional Programs – Prekindergarten through Grade 12

Line 1. Instruction (1000). Total current operation expenditure for activities dealing with the interaction of teachers and students in the classroom, home, or hospital as well as co-curricular activities. Report amounts for activities of teachers and instructional aides or assistants engaged in regular instruction, special education, and vocational education programs. Exclude adult education programs (report on line 13).

Line 2. Pupil support (2100). Report expenditures for administrative, guidance, health, and logistical support that enhance instruction. Include attendance, social work, student accounting, counseling, student appraisal, information, record maintenance, and placement services. Also include medical, dental, nursing, psychological, and speech services.

Line 3. Instructional staff support (2200). Include expenditures for supervision of instruction service improvements, curriculum development, instructional staff training, and media, library, audiovisual, television, and computer-assisted instruction services.

Line 4. General administration (2300). Expenditure for board of education and executive administration (office of the superintendent) services.

Line 5. School administration (2400). Report expenditure for the office of the principal services.

Line 6. Operation and Maintenance of Plant (2600). Expenditure for buildings services (heating, electricity, air conditioning, property insurance), care and upkeep of grounds and equipment, nonstudent transportation vehicle operation and maintenance, and security services.

Line 7. Student Transportation (2700). Report expenditure for vehicle operation, monitoring riders, and vehicle servicing and maintenance.

Line 8. Business/central/other support services (2500, 2800, and 2900). Include business support expenditures for fiscal services (budgeting, receiving and disbursing funds, payroll, internal auditing, and accounting), purchasing, warehousing, supply distribution, printing, publishing, and duplicating services. Also include central support expenditures for planning, research and development, evaluation, information, management services, and expenditures for other support services not included on lines 2 through 7. Report in Part IX, line 15 (support service expenditures, nonspecified) any item that cannot be reported because it covers more than one of the items in lines 2 through 8, such as "total support services" not broken down by function.

Section B – Elementary-secondary Noninstructional Programs

Line 9. Food services (3100). Gross expenditure for cafeteria operations to include the purchase of food but excluding the value of donated commodities and purchase of food service equipment (report equipment in Part III-4).

Line 10. Enterprise operations (3200). Include expenditure for business-like activities (such as a bookstore) where the costs are recouped largely with user charges.

Line 11. Other. Report the expenditure for other elementary-secondary noninstructional activities not related to food services or enterprise operations. Nonenterprise student activities should be included with "instruction" on line 1.

Section C – Nonelementary-secondary Programs

Line 12. Community services (3300). Include any local education agency expenditure for providing noneducation services such as operation of a swimming pool, public library, programs for the elderly, or child care centers.

Line 13. Adult education. Expenditure for provision of GED or other classes offered by the local education agency outside the elementary-secondary curriculum.

Line 14. Other. All other nonelementary-secondary programs such as any community college programs.

Section D – EXHIBITS OF SELECTED ITEMS REPORTED ABOVE IN II-A AND II-B

Line 15. Payments to private schools (object 563). Report all expenditures to private schools for tuition and for any other purpose. These payments will be deducted from the amounts reported in Parts II-A and II-B when calculating per pupil expenditures for the school system. The fall membership count of students supported by public school money but attending private schools should be excluded from the fall membership reported in Part VIII. Identify in the remarks section the expenditure functions for which the private school payment was made, if possible. If no information is provided, this amount will be deducted from instruction expenditure reported in Part II-A1 when calculating per pupil expenditures.

Line 16. Payments to public charter schools. Indicate in the remarks section whether fall membership counts of students attending charter schools are included in the school system's membership reported in the Common Core of Data Nonfiscal Survey or in Part VIII of this form. Also identify in the remarks section the expenditure functions for which the charter school payment was made, if possible. This information will be used in determining per pupil expenditure amounts for the school system.

Part III – CAPITAL OUTLAY EXPENDITURES

Include expenditures for construction of fixed assets (line 1); purchasing fixed assets including land and existing buildings and grounds (line 2); and equipment (lines 3 and 4). Instructional equipment (line 3) consists of all equipment (or capital outlay) recorded in general and operating funds under "instruction" – function code 1000.

Report in Part IX the amount of any equipment expenditure that cannot be broken down into the categories of "instructional" and "other equipment."

Part IV – OTHER EXPENDITURES BY LOCAL EDUCATION AGENCY

Line 1. Total salaries and wages. Enter the total expenditure for all salaries and wages paid by the local education agency during the fiscal year. Include both here and in Part II-A, column 1, gross salaries without deduction of withholdings for income tax, employee contributions to Social Security and retirement coverage, etc. Do not include employer paid employee benefits in these figures. The total entered for salaries and wages should at least be equal to the sum of the entries made in Part II-A, column 1, and be larger if the local education agency paid salaries for enterprise operations and for nonelementary-secondary program activities.

Line 2. Total employee benefit payments. Enter the total expenditure for all employee benefits paid by the local education agency during the fiscal year. Include both here and in Part II-A, column 2, the employer share of state or local employee retirement contributions, social security contributions, group life and health insurance, unemployment and workmen's compensation, and any tuition reimbursements. Exclude (and report in Part V) state payments made on behalf of the local education agency. The total entered for employee benefits should at least be equal to the sum of the entries made in Part II-A, column 2, and be larger if the local education agency paid employee benefits for nonelementary-secondary program activities.

Line 3. Payments to other school systems. Report payments to in-state and out-of-state public school systems for tuition, transportation, computer and purchasing services, etc. Payments made to dependent school systems or to parent governments of dependent school systems should be included here.

Lines 4 and 5. Report payments to state and local governments, including repayments of loans. Also include debt service payments to state and local governments and school building authorities which incur debt instead of the school system.

Line 6. Interest on school system debt. Expenditure for interest incurred on both long-term and short-term indebtedness of the school system. Exclude principal payments which should be reported in Part VI.

CONTINUE ON PAGE 8 

Part V – STATE PAYMENTS ON BEHALF OF THE LOCAL EDUCATION AGENCY

Include state payments that benefit the local education agency but which are not paid directly. Report on line 1 amounts transferred by the state into state teacher or public employee retirement funds. Also include other employee benefit transfers, such as health, life, or unemployment compensation insurance payments. Include in line 2 any other payments on behalf of the school system, such as for the purchase of textbooks or school buses purchased by the state and given to the local education agency.

Part VI – DEBT

Include in section A bonded indebtedness and any other school district interest-bearing debt with a term of more than one year. Report in section B interest-bearing tax anticipation and bond anticipation note balances and other short-term debt with a term of one year or less. Exclude accounts payable and other noninterest-bearing obligations.

Part VII – CASH AND INVESTMENTS HELD AT END OF FISCAL YEAR

Report the total amount of cash on hand and on deposit and investments in federal government, federal agency, state and local government and nongovernment securities. Report all investments at par value. Exclude accounts receivable, value of real property, and all nonsecurity assets.

Part VIII – FALL MEMBERSHIP – OCTOBER, 2001

Include an unduplicated head count of pupils enrolled in the school system on the closest date to October 1, 2001 as possible. Include pupils transferred into the school system and exclude pupils transferred out. Also exclude pupils attending private schools. *You do not have to report any information in this part if you report the same information in the Common Core of Data Nonfiscal Survey.*

Part IX – SPECIAL PROCESSING ITEMS

These are special use items. Amounts should only be reported in this part if all pertinent financial data cannot be reported in Parts I through VIII. Before entering data in this part, please contact the Elementary-Secondary Education Statistics Branch, U.S. Census Bureau at 1-800-622-6193.

Line 1. Student fees, nonspecified. Report here any item in your chart of accounts which cannot be crosswalked into the items identified in Part I, Line 9 (tuition), 10 (transportation), 11 (textbook sales), 12 (school food service sales), or 13 (student activities). An example would be total student fees not broken down into these separate categories.

Line 2. Census local, NCES state revenue. This category is reserved for any tax item classified as local by the U.S. Census Bureau and as state by the National Center for Education Statistics.

Line 3. Census state, NCES local revenue. This category is reserved for any tax item classified as state by the U.S. Census Bureau and as local by the National Center for Education Statistics.

Line 4. State revenue, nonspecified. Report here any item in your chart of accounts which cannot be crosswalked into the items identified in Part I-B, lines 1 through 11. An example would be total state revenue not broken down into separate state aid programs.

Line 5. Federal revenue, nonspecified. Report here any item in your chart of accounts which cannot be crosswalked into the items identified in Part I-C, lines 1 through 8, and Part I-D, lines 1 through 4. An example would be total federal aid not broken down into separate federal grant programs.

Line 6. State payment on behalf of the LEA, instruction. Report expenditures of the revenues reported in Part V, lines 1 and 2, that were made for instruction. See definition for Part II-A, line 1.

Line 7. State payment on behalf of the LEA, pupil support services. This item consists of the actual or estimated expenditure from the revenues reported in Part V, line 1, for pupil support services. See definitions for Part II-A, line 2.

Line 8. State payment on behalf of the LEA, instructional staff services. This item consists of the actual or estimated expenditure from the revenue reported in Part V, line 1, for instructional staff services. See definitions for Part II-A, line 3.

Line 9. State payment on behalf of the LEA, general administration. This item consists of the actual or estimated expenditure from the revenues reported in Part V, line 1, for general administration. See definitions for Part II-A, line 4.

Line 10. State payment on behalf of the LEA, school administration. This item consists of the actual or estimated expenditure from the revenues reported in Part V, line 1, for school administration. See definitions for Part II-A, line 5.

Line 11. State payment on behalf of the LEA, operation and maintenance of plant. This item consists of the actual or estimated expenditure from the revenues reported in Part V, line 1, for operation and maintenance of plant. See definitions for Part II-A, line 6.

Line 12. State payment on behalf of the LEA, student transportation. This item consists of the actual or estimated expenditure from the revenues reported in Part V, line 1, for student transportation. See definitions for Part II-A, line 7.

Line 13. State payment on behalf of the LEA, business/central/other. This item consists of the actual or estimated expenditure from the revenues reported in Part V, line 1, for business, central and other support services. See definitions for Part II-A, line 8.

Line 14. State payment on behalf of the LEA, other. Report expenditures of the revenues reported in Part V, line 1, that were made for other than instruction or support services. See definitions for Part II-B.

Line 15. Support services, nonspecified. Report here any item in your chart of accounts which cannot be crosswalked into the items identified in Part II-A, lines 2 through 8.

Line 16. Equipment expenditure, nonspecified. Report here any item in your chart of accounts which cannot be crosswalked into the items identified in Part III, line 3 (instructional equipment) or line 4 (other equipment). An example would be total equipment not broken down by function.

Line 17. Own retirement system transfer, instruction. If the school system administers its own employee retirement fund (rather than participating in a state government retirement system), please report the employer contribution for instructional employees.

Line 18. Own retirement system transfer, support services. If the school system administers its own employee retirement fund (rather than participating in a state government retirement system), please report the employer contribution for support services and other noninstructional employees.

Line 19. Federal revenue on behalf of school system. Report any item in your chart of accounts identified as received through federal payments made on behalf of the school system.

Line 20. State payment on behalf of the LEA, instructional nonbenefits. Report expenditures of the revenues reported in Part V, line 2, that were made for instruction. See definition for Part II-A, line 1.

Line 21. State payment on behalf of the LEA, support services nonbenefits. Report expenditures of the revenues reported in Part V, line 2, that were made for support services. See definition for Part II-A, lines 2 through 8.

Line 22. State payment on behalf of the LEA, non-instructional programs nonbenefits. Report expenditures of the revenues reported in Part V, line 2, that were made for noninstructional programs. See definition for Part II-B.

Line 23. State payment on behalf of the LEA, nonelementary-secondary programs. Report expenditures of the revenues reported in Part V, lines 1 & 2, that were made for nonelementary-secondary programs. See definition for Part II-C.

Line 24. Capital Outlay. Report expenditures of the revenues reported in Part V, line 2, that were made for capital outlay. See definitions for Part III.

/* Run a PROC CONTENTS to view the contents of the new file. */
proc contents data=newfile;
run;

```

**Appendix H—Sample SPSS Program
Longitudinal Fiscal-Nonfiscal Detail File: 1989-90 to 1999-2002**

```
*****
*** This program shows how to aggregate data from the CCD school file to ***
*** the agency level and merge the aggregated data with the longitudinal ***
*** school district file. ***
*** ***
*****
```

```
* Open the longitudinal unified districts dataset *.
GET FILE='C:\EdFinSeminar\SPSS\Data\ccd_sch_9900.sav'.
```

```
* Sort the file by LEAID *.
SORT CASES BY leaid (A).
```

```
* Aggregate counts of 12th graders by race/ethnicity and gender to the *.
* district level. AGGREGATE produces all kinds of statistics, we only *.
* want the SUM. The BREAK options specifies which variable to use for *.
* summation. *
```

```
AGGREGATE
  /OUTFILE='C:\EdFinSeminar\SPSS\Data\school_sum.sav'
  /BREAK=leaid
  /am12m99_sum = SUM(am12m99) /as12m99_sum = SUM(as12m99)
  /hi12m99_sum = SUM(hi12m99) /bl12m99_sum = SUM(bl12m99)
  /wh12m99_sum = SUM(wh12m99) /am12f99_sum = SUM(am12f99)
  /as12f99_sum = SUM(as12f99) /hi12f99_sum = SUM(hi12f99)
  /bl12f99_sum = SUM(bl12f99) /wh12f99_sum = SUM(wh12f99)
  /am12u99_sum = SUM(am12u99) /as12u99_sum = SUM(as12u99)
  /hi12u99_sum = SUM(hi12u99) /bl12u99_sum = SUM(bl12u99)
  /wh12u99_sum = SUM(wh12u99).
```

```
* Open the longitudinal unified districts dataset *.
GET FILE='C:\EdFinSeminar\SPSS\Data\lsdf90_00_1b.sav'.
```

```
* Sort the file by LEAID *.
SORT CASES BY leaid (A).
```

```
* Merge the LSDF and school summation files. The FILE=* lets us limit the *.
* new file to just those records in the longitudinal school district file. *.
```

```
MATCH FILES /FILE=*
  /FILE='C:\EdFinSeminar\SPSS\Data\school_sum.sav'
  /BY leaid.
EXECUTE.
```

```
* Save the resulting file *.
SAVE OUTFILE='C:\EdFinSeminar\SPSS\Data\New_lsdf99_00.sav'/COMPRESSED.
```
