## NATIONAL CENTER FOR EDUCATION STATISTICS

## [TT NAEP 1998 riting THE NATION AND THE STATES

## What is The Nation's Report Card?

THE NATION'S REPORT CARD, the National Assessment of Educational Progress (NAEP), is the only nationally representative and continuing assessment of what America's students know and can do in various subject areas. Since 1969, assessments have been conducted periodically in reading, mathematics, science, writing, history, geography, and other fields. By making objective information on student performance available to policymakers at the national, state, and local levels, NAEP is an integral part of our nation's evaluation of the condition and progress of education. Only information related to academic achievement is collected under this program. NAEP guarantees the privacy of individual students and their families.

NAEP is a congressionally mandated project of the National Center for Education Statistics, the U.S. Department of Education. The Commissioner of Education Statistics is responsible, by law, for carrying out the NAEP project through competitive awards to qualified organizations. NAEP reports directly to the Commissioner, who is also responsible for providing continuing reviews, including validation studies and solicitation of public comment, on NAEP's conduct and usefulness.

In 1988, Congress established the National Assessment Governing Board (NAGB) to formulate policy guidelines for NAEP. The Board is responsible for selecting the subject areas to be assessed from among those included in the National Education Goals; for setting appropriate student performance levels; for developing assessment objectives and test specifications through a national consensus approach; for designing the assessment methodology; for developing guidelines for reporting and disseminating NAEP results; for developing standards and procedures for interstate, regional, and national comparisons; for determining the appropriateness of test items and ensuring they are free from bias; and for taking actions to improve the form and use of the National Assessment.

## The National Assessment Governing Board

## Mark D. Musick, Chair

President
Southern Regional Education Board
Atlanta, Georgia
Michael T. Nettles, Vice Chair
Professor of Education \& Public Policy
University of Michigan
Ann Arbor, Michigan

## Moses Barnes

Secondary School Principal

## EXECUTIVE SUMMARY

The National Assessment of Educational Progress (NAEP) is the nation's only ongoing survey of what students know and can do in various academic subject areas. Authorized by Congress and administered by the National Center for Education Statistics in the U.S. Department of Education, NAEP regularly reports to the public on the educational progress of students in grades 4,8 , and 12. In 1998 NAEP conducted a national writing assessment of fourth-, eighth-, and twelfth-grade students and a state-by-state writing assessment of eighth-grade students.

This report presents the results of the NAEP 1998 writing assessment for the nation and for participating states and jurisdictions. Students' performance on the assessment is described in terms of their average writing score on a 0 -to300 scale and in terms of the percentage of students attaining each of three achievement levels: Basic, Proficient, and Advanced.

The achievement levels are performance standards adopted by the National Assessment Governing Board (NAGB) as part of its statutory responsibilities. The achievement levels are collective judgments of what students should know and be able to do for each grade tested. They are based on recommendations by broadly representative panels of classroom teachers, education specialists, and members of the general public.

As provided by law, the Acting Commissioner of Education Statistics, upon review of a congressionally mandated evaluation of NAEP, has determined that the achievement levels are to be considered developmental and should be interpreted and used with caution. However, both the Acting Commissioner and NAGB believe these performance standards are useful for understanding student achievement. They have been widely used by national and state officials, including the National Education Goals Panel, as a common yardstick of academic performance.

In addition to providing average scores and achievement level performance for the nation and 39 states and other jurisdictions, this report provides results for subgroups of students defined by various background and contextual characteristics. A summary of major findings from the NAEP 1998 writing assessment is presented on the following pages, preceded by a summary of the assessment content.

## A Description of the NAEP Writing Assessment

The assessment included a variety of writing "prompts" (topics to which students responded) to inspire students' best "first-draft" writing. The Writing Framework and Specifications for the 1998 National Assessment of Educational Progress provided the objectives for the writing assessment. This framework, developed by NAGB, represents the expertise and experience of writing teachers, researchers and scholars, business leaders, and policymakers. The six objectives for the assessment, and how they were met, are listed below.

## OBJECTIVE 1:

Students should write for a variety of purposes: narrative, informative, and persuasive.
Students at grades 4, 8, and 12 responded to prompts asking for narrative, informative, and persuasive writing.

## OBJECTIVE 2:

Students should write on a variety of tasks and for many different audiences.
The 66 prompts on the writing assessment presented students with a variety of tasks, such as writing a letter to the editor of a newspaper, offering advice to younger students, reporting to a school committee, and writing a story in the voice of a character.

## OBJECTIVE 3:

Students should write from a variety of stimulus materials, and within various time constraints.
Some of the prompts included pictures, photographs, poems, or stories to inspire students' writing. Some students at grades 8 and 12 received one 50-minute prompt. All other students received two 25-minute prompts.

## OBJECTIVE 4:

Students should generate, draft, revise, and edit ideas and forms of expression in their writing.
Each student who participated in the assessment was given a brochure to keep that included suggestions for planning and reviewing writing. Although the assessment time was limited, a planning page was given for each prompt.

## OBJECTIVE 5:

Students should display effective choices in the organization of their writing. They should include detail to illustrate and elaborate their ideas, and use appropriate conventions of written English.
The scoring guides used to evaluate students' writing focus on students' abilities to organize their writing, develop their writing with details, and use the conventions of written English to present first-draft writing that communicates clearly.

## OBJECTIVE 6:

Students should value writing as a communicative activity. The writing assessment included "background" questions, given to all participating students, which asked students whether they like to write. It also asked students about their writing practices at school and at home.

## Writing Scale Score and Achievement Level Results

## Results for the nation

- Average scores for the nation were set at 150 on a scale of 0 to 300 for all grades assessed $(4,8$, and 12$)$. This average can be used as a basis for comparison for states and population subgroups.
$\rightarrow$ At grades 4,8 , and 12 , the percentages of students performing at or above the Basic level of writing achievement were 84,84 , and 78 percent, respectively; the percentages who performed at or above the Proficient level were 23,27 , and 22 percent respectively. One percent of students each at grades 4,8 , and 12 performed at the highest achievement level, Advanced.

## Results for the states and other jurisdictions

$>$ Of the 39 states and other jurisdictions that participated in the 1998 state-by-state writing assessment at grade 8 and that met the participation guidelines, the following had scale scores above the national average: Colorado, Connecticut, the Department of Defense domestic schools, the Department of Defense overseas schools, Maine, Massachusetts, Oklahoma, Texas, Virginia, and Wisconsin. The same group of states, with the exception of Colorado, Oklahoma, and Virginia, were also above the national average in terms of percentages of students at or above the Proficient achievement level.

## Writing Results for Student Subgroups

## Gender

- At all three grades in 1998, female students had higher average writing scale scores than their male peers. In addition, the percentage of females at or above the Basic and Proficient achievement levels, and at the Advanced level, exceeded that of males.

## Race/Ethnicity

- At grade 4, the average writing scale scores for Asian/Pacific Islander students were higher than those for White, Black, Hispanic, and American Indian students. Also at grade 4, White students had higher average writing scale scores than Black, Hispanic, and American Indian students. At grades 8 and 12 , the average writing scale scores for Asian/Pacific Islander and White students were similar and were higher than those for Black, Hispanic, and American Indian students.

## Parents' level of education

Students in grades 4,8 , and 12 were asked to indicate their parents' highest level of education. Consistent with past NAEP assessments, in 1998 students who reported higher levels of parental education tended to have higher average writing scale scores.

## Region of the country

- The 1998 results by region indicated that fourth and eighth graders in the Northeast and Central regions outperformed their counterparts in the Southeast and West. Among twelfth graders, students in the Southeast had lower average writing scale scores than did students in each of the other three regions.

## Type of location

In 1998, fourth and eighth graders in rural/small town schools and in urban fringe/large town schools had higher average writing scale scores than their counterparts in central city schools. Eighth and twelfth graders in urban fringe/large town schools had higher average writing scale scores than their counterparts in rural/small town schools. Twelfth graders in central city schools had average writing scale scores that were similar to the scores of their counterparts in urban fringe/large town schools and in rural/small town schools.

## Free/Reduced-Price School Lunch Program

- The NAEP 1998 writing assessment collected information on student eligibility for the federally funded Free/Reduced-Price School Lunch Program, which provides children near or below the poverty line with nourishing meals. At all three grades, students who were eligible for the Free/Reduced-Price School Lunch Program had lower average writing scale scores than students who were not eligible for the program.

## Type of school

At all three grades, students attending nonpublic schools had higher average writing scale scores than their counterparts attending public schools. This result is consistent with the findings of past NAEP assessments.

## School and Home Factors Related to Writing Performance

## Teachers talking with students about their writing

- At all three grades, over 80 percent of students reported that their teachers talked with them about their writing at least sometimes. At all three grades assessed, students who reported that their teachers either always or sometimes talked with them about their writing had higher average writing scale scores than those who reported that their teachers never did so.

## Saving student work in a folder or portfolio

$\rightarrow$ Eighty-one percent of fourth graders, 79 percent of eighth graders, and 75 percent of twelfth graders reported that they or their teachers saved their written work in a folder or portfolio. Students who reported that they or their teachers saved their writing in a folder or portfolio had higher average writing scale scores than those who reported they did not save their work in a folder or portfolio.

## Computer use

- At all three grades, over one-third of students used computers for writing drafts or final versions of stories or reports at least once a week. At the fourth grade, 35 percent of students used computers for writing drafts or final versions of stories or reports once or twice a month. At grades 8 and 12,39 and 42 percent of students, respectively, used computers for writing drafts or final versions of stories or reports once or twice a month.
$>$ Fourth-grade students who reported using computers for writing drafts or final versions of stories or reports once or twice a month had higher average writing scale scores than those who reported never or hardly ever using computers for this purpose and those who used computers for this purpose at least once a week. At grade 8 , students who used computers for this purpose once or twice a month had higher scores than those who did so at least once a week. At grades 8 and 12, students who reported using computers for writing drafts or final versions of stories or reports at least once a week or once or twice a month had higher average writing scale scores than those who reported never or hardly ever using computers for this purpose.

## Writing drafts of a paper

Over 80 percent of fourth-, eighth-, and twelfth-grade students reported that their teachers asked them to write more than one draft of a paper at least sometimes. At grades 8 and 12, students whose teachers always asked them to write more than one draft of a paper had higher average writing scale scores than did their peers whose teachers sometimes or never asked them to do so. At grade 4, there was no relationship between students' reports of writing more than one draft and student performance.

## Planning writing on the assessment and in class

On the assessment, students were provided a space to plan their writing in any written form, as well as a brochure with suggestions about how to do so. Most students in the assessment were given a test booklet with two 25 -minute writing prompts. At the fourth grade, 47 percent of students planned for at least one of the two prompts in their test booklets, as did 66 percent of eighth graders and 67 percent of twelfth graders. At all three grades, students who did visible planning for both writing prompts had higher average writing scale scores than students who did visible planning for one prompt or neither prompt.

Students at grades 8 and 12 reported on how often their teachers asked them to plan their writing. Eighty-six percent of eighth graders and 84 percent of twelfth graders reported that their teachers asked them to plan their writing at least once or twice a month. At both grades, students who reported that their teachers asked them to plan their writing at least once a week, or once or twice a month, had higher average writing scale scores than students who reported that their teachers never or hardly ever asked them to plan their writing.

## Home Factors

## Types of reading materials in the home

Students were asked about the presence of four types of reading materials in the home: a newspaper, an encyclopedia, at least 25 books, and magazines. Thirty-eight percent of fourth graders, 51 percent of eighth graders, and 53 percent of twelfth graders reported having all four types of reading materials in the home. At all three grades, the more of these four types of reading materials were reported to be in the home, the higher the average writing scale scores. This result is consistent with the results of past NAEP assessments in a variety of subject areas.

## Discussing studies at home

$>$ Students at all three grades were asked how often they discuss things they have studied in school with someone at home. Seventy-six percent of fourth graders, 69 percent of eighth graders, and 67 percent of twelfth graders reported discussing what they have studied in school with someone at home at least once a week. At all three grades, the more frequently students discussed their studies with someone at home, the better their average writing scale scores. Again, this result is consistent with those of earlier NAEP assessments in many subjects.

## This Report

This report comprises six chapters, each focusing on different results of the NAEP 1998 writing assessment. The Introduction frames the results by describing the objectives of the assessment and the kinds of questions it contained. Chapter 1 presents national results, including achievement level definitions and results, and exemplars of student writing from the assessment at each of the three achievement levels: Basic, Proficient, and Advanced. This is the first time NAEP has set achievement levels for writing.

Chapters 2 and 3 present results for regions of the country and for subgroups of students (for example, male and female students), by average scale scores and achievement levels, respectively. Chapter 4 provides information about some instructional practices. In that chapter, students' answers to such questions as "how often does your teacher talk to you about your writing" are reported, along with student performance data.

Chapter 5 presents results of the state-by-state assessment done at grade 8 , which was the first NAEP state-by-state assessment in writing. That chapter also reports results by subgroups of the population in each participating state or jurisdiction. This information is supplemented by four appendices: Appendix C presents the percentage of students in each subgroup by state or jurisdiction, while Appendix D presents other contextual information, such as expenditures on education, from non-NAEP sources such as the census. Appendix E provides more detailed achievement level results for subgroups of students, and Appendix F presents results for students in nonpublic schools.

Chapter 6 explores in greater depth how student writing on the assessment was evaluated. It shows the scoring guides that were used and reports on student performance in narrative, informative, and persuasive writing. Chapter 6 also provides additional samples of student writing. The student samples and scoring guides may prove useful especially to teachers by giving examples of students' writing for the NAEP writing assessment and explanations of how that writing was evaluated.

The remaining appendices are technical ones: Appendix A provides information about procedures for the administration and evaluation of the assessment, as well as about how subgroups (such as race/ethnicity) were defined. Appendix B provides standard errors for tables included in the body of the report.

## INTRODUCTION

As technological developments usher in the twenty-first century, writing to create and to communicate remains essential to our lives in the "information age." The ability to write clearly and effectively is particularly valuable in an era of increasing specialization.

By writing about science, history, and other subjects, as well as about literature, students deepen their knowledge of those subjects and learn how to communicate that knowledge effectively. Writing itself is an act of discovery.

Many writing instructors for the past several decades have emphasized that writing is a recursive process, requiring continual rethinking and revision. In today's writing classrooms, one can observe students learning how to plan, critique, and revise their own writing, as well as learning how to critique that of others. By reflecting on their writing, students become better writers, able to express themselves more clearly and to shape their communications to the needs of specific audiences.

The ability to write is important in a variety of situations. Writing has many purposes: for example, to inform people about problems or events, to persuade people to adopt positions on issues, and to entertain, educate, and inspire people through stories and other narratives. Writing is an effective way for individuals to express their ideas and opinions to friends, potential employers, government officials, or other groups of people. The ability to write is crucial for an active and engaged citizenry.

## Overview of the 1998 National Assessment of Educational Progress (NAEP)

This report is written for a variety of audiences - policymakers, parents, teachers, and concerned citizens. The results reported here can provide important information for them to consider in discussing and making decisions about the progress of our nation's students in writing.

The NAEP is the only nationally representative and continuing assessment of what students in the United States know and can do in various subjects. NAEP is authorized by Congress and directed by the National Center for Education Statistics (NCES) of the U.S. Department of Education. The National Assessment Governing Board (NAGB), an independent, bipartisan body, provides policy direction for NAEP.

Since being authorized by Congress in 1969, NAEP's mission has been to collect, analyze, and present reliable information about what American students know and can do. Both public and private school students in grades 4,8 , and 12 are sampled and assessed on a regular basis in a range of academic subject areas.

All NAEP assessments are based on a content framework developed through a national consensus process that involves teachers, curriculum experts, parents, and members of the general public. The NAEP Writing Framework, adopted by the National Assessment Governing Board (NAGB), provided objectives and guidelines for the writing assessment. ${ }^{1}$

The 1998 writing assessment was administered to national samples of fourth, eighth, and twelfth graders. It was also administered to eighth graders in jurisdictions ${ }^{2}$ that participated in the state-by-state assessment. Therefore, this report provides state-by-state results on the writing achievement of eighth graders, as well as national results at all three grades. Across all three grades, nearly 160,000 students were assessed in the national and state samples.

This report describes the results of the NAEP 1998 national and state assessments in writing. In the NAEP writing assessment, students were evaluated on their responses to writing topics ("prompts"). Most students in the assessment were asked to respond to two 25 -minute writing prompts. Some students at grades 8 and 12 in the national sample were asked to respond to one 50 -minute prompt.

[^0]
## Framework for the 1998 Assessment ${ }^{3}$

The NAEP Writing Framework guided the development of the NAEP 1998 writing assessment. The framework provides overarching objectives for the assessment, as well as directions for the kinds of prompts to include on the assessment. The result of a national consensus effort, the NAEP Writing Framework represents the ideas of hundreds of individuals involved and interested in writing education. This consensus effort was managed by the Center for Research on Evaluation, Standards, and Student Testing (CRESST), under the direction of the National Assessment Governing Board (NAGB). The framework's objectives are the same as those for the 1992 assessment. For 1998, American College Testing (ACT), under contract to NAGB, added detailed guidelines for the kinds of writing prompts to include in the assessment. These guidelines called for an increase in the number of NAEP writing prompts, provided detailed directions for including a wide variety of prompts, and provided new directions for the scoring guides used to evaluate student responses. Because almost all of the prompts in the 1998 assessment were new and because all responses were evaluated using new scoring guides, student performance on this assessment cannot be compared to student performance on the 1992 writing assessment. ${ }^{4}$

The NAEP Writing Framework, informed by current research and theory, emphasizes that writing addresses a variety of purposes and audiences. For the assessment, the framework describes three purposes for writing: narrative (telling a story), informative (informing the reader), and persuasive (persuading the reader). The selection of these three purposes for writing was based on their use in instruction. ${ }^{5}$ The framework specified the three purposes for writing to ensure that the NAEP writing assessment covered different kinds of writing. The three purposes, which were assessed at all three grades $(4,8$, and 12), are described in Figure i.l.

[^1]
## Figure i. 1

## Purposes for writing

\(\left.\left.$$
\begin{array}{|l|l|}\hline \text { Narrative Writing } & \begin{array}{l}\text { Narrative writing encourages writers to incorporate their imagination } \\

\text { Informative Writing } & \begin{array}{l}\text { In informative writing, the writer provides the reader with information. } \\
\text { Informative writing may involve reporting on events or experiences } \\
\text { or analyzing concepts and relationships. When used as a means } \\
\text { of exploration, informative writing helps both the writer and the } \\
\text { reader to learn new ideas and to reexamine old conclusions. } \\
\text { Informative prompts in the NAEP 1998 writing assessment asked } \\
\text { students to write on specified subjects using many kinds of } \\
\text { information, such as newspaper articles, charts, photographs, or }\end{array}
$$ <br>
reported dialogues (provided with the assessment), as well as their <br>
own knowledge. Students could write in a variety of formats, such <br>

as reports, newpaper articles, and letters.\end{array}\right\} $$
\begin{array}{l}\text { Persuasive writing seeks to persuade the reader to take action or to }\end{array}
$$\right\}\)| Pring about change. This type of writing involves a clear awareness |
| :--- |
| of what arguments might most affect the audience being addressed. |
| Writing persuasively also requires the use of such skills as analysis, |
| inference, synthesis, and evaluation. |
| Persuasive prompts in the NAEP 1998 writing assessment asked |
| students to write letters to the editor or to friends, to refute arguments, |
| or to take sides in a debate. |

As the framework notes, these three purposes for writing are not entirely distinct. For example, persuasive letters may incorporate factual information, and the writer of an informative essay may tell a story to illustrate a point. The professional raters who evaluated the student responses were instructed not to penalize such diverse forms of presentation (which students who received high ratings sometimes used).

Table i.l illustrates the percentage of the assessment devoted to each writing purpose. Those percentages vary by grade level to match both different levels of development and different emphases in instruction. In the assessment, narrative writing was emphasized at grade 4 ; the three purposes for writing received approximately equal emphasis at grade 8 ; and the emphasis was on persuasive writing at grade 12. The table shows the actual distribution of prompts in the assessment, which matched the target percentages set by the framework.

## Table i. 1

Distribution of writing prompts by purpose for writing in the NAEP 1998 writing assessment

| Purpose for <br> writing <br> Grade 4 | Percentage of <br> prompts | Number <br> of prompts |
| :---: | :---: | :---: |
| Narrative | 40 | 8 |
| Informative | 35 | 7 |
| Persuasive | 25 | 5 |
| Grade 8 | 35 | 7 |
| Narrative | 35 | 7 |
| Informative | 30 | 6 |
| Persuasive | 25 | 7 |
| Grade 12 | 35 | 8 |
| Narrative | 40 | 7 |
| Informative | Persuasive |  |

SOURCE: National Center for Education Statistics, National Assessment of Educational Progress (NAEP), 1998 Writing Assessment.

In addition to specifying the amount of time to be devoted to each writing purpose on the assessment, the framework specifies that, across the assessment, students should:

- write on a variety of tasks and for many different audiences;
- write from a variety of stimulus materials; and
$>$ write within different time constraints.
Writers shape their works not only to express their own views and knowledge, but also to address the intended reader by varying such aspects of their writing as the formality of the language. Therefore the assessment used many prompts in which the audience was specified. Some students were asked to write, for example, a letter to a friend or to a school board. Students also had the opportunity to write in a variety of forms, such as essays, letters, reports, and stories.

Research has shown that providing students with a variety of stimuli (visual or written materials to inspire writing) is useful in writing instruction. ${ }^{6}$ Visual materials may aid those who are particularly inspired by images; others may find it easiest to write in response to literature or to factual or historical material. Therefore some prompts in the assessment asked students to write in response to a photograph, cartoon, or drawing. Other students wrote in response to prompts that incorporated newspaper articles or dialogues about issues of interest to students. Still other students were asked to respond to letters they received as part of writing prompts in the assessment. Finally, some prompts incorporated literary works such as poems and stories.

To address the guideline that students should write within different time constraints, some students at grades 8 and 12 were asked to respond to a single 50 -minute prompt. The rest of the students were asked to respond to two different prompts, timed at 25 minutes each. Because the 50 -minute prompts

[^2]at grades 8 and 12 were not included on the NAEP writing scale, they are not presented in this report. Information on sample 50 -minute prompts is available on the NAEP Web site (http://nces.ed.gov/nationsreportcard) for further research.

The writing framework further specifies that students should:

- generate, draft, evaluate, revise, and edit ideas and forms of expression in their writing; and
$>$ display effective choices in the organization of their writing. Students should include detail to illustrate and elaborate their ideas and should use appropriate conventions of written English.

In the assessment, students had a limited time to write. While the limits of a timed assessment prevented students from engaging in the kind of drafting and revision that can be done in a regular classroom environment, each prompt in the assessment included a page for planning to encourage students to plan their writing. In addition, every student received a brief brochure with suggestions for planning and revising their writing. The three different versions of the brochure for grades 4,8 , and 12 are reprinted in Chapter 6. The elements of writing valued in the framework - elaboration and detail, organization, and mastery of the conventions of written English - are central components of the guides for scoring student responses, which are also presented in Chapter 6.

To further address the framework's goal that students "generate, draft, evaluate, revise, and edit" their ideas in writing, NAEP performed a special study of classroom writing in 1998. In 100 classrooms each at grades 4 and 8, students submitted their two best pieces of writing, and their teachers described their approaches to teaching writing in extensive interviews. Results of that study will be published in a forthcoming report.

Finally, the framework states as an objective that students should:
$>$ value writing as a communicative activity.
Background questions on the assessment asked students about whether they saw themselves as good writers and what their writing practices were at home and at school.

## The Writing Assessment Instruments

As the discussion of the writing framework above indicates, the NAEP writing assessment reflects current research and perspectives on writing and its measurement. To ensure this currency, the development process for the assessment instruments involved a series of reviews by writing and measurement experts, state officials, teachers, and writing researchers. All components of the assessment were evaluated for curricular relevance, developmental appropriateness, fairness concerns, and adherence to the framework and test specifications. Over 100 prompts were field tested; from those, the 66 that best met the criteria above were chosen to be used in the 1998 assessment. Twenty 25 -minute prompts were given at each grade. In addition, three 50 -minute prompts (one narrative, one informative, and one persuasive) were given at both grades 8 and 12 .

All students at grade 4 , and most students at grades 8 and 12 , received test booklets with two prompts. Students were given 25 minutes to respond to each of the two prompts. Some students at grades 8 and 12 were given one 50 minute prompt instead of two 25 -minute prompts. The 50 -minute prompts were not given at the state level. All students had a total of 50 minutes to write. Although a few prompts were given at more than one grade level, the scoring guidelines were different at each grade level, and so no cross-grade comparisons are made in this report.

As part of the assessment, students answered general background questions that asked them to identify their race/ethnicity, parents' highest level of education, and other factors such as how often someone at home talked to them about their studies. They also responded to questions about their writing practices in school. These background questions were given in separately timed sections. They are discussed in Chapter 4, in the context of student achievement on the assessment.

## Description of School and Student Samples

The NAEP 1998 writing assessment was conducted nationally at grades 4,8 , and 12 and on a state-by-state basis at grade 8 . For both the national and state-by-state assessments, representative samples of public and nonpublic school students who were selected through stratified random sampling procedures were assessed.

Thus, the national and jurisdictional results presented in this report are based on representative samples of students. Each selected school that participated in the assessment and each student assessed represent a portion of the population of interest. As a result, after adjustment for student and school nonresponses, the findings presented in this report pertain to all fourth, eighth, and twelfth graders in the nation and regions and to all eighth graders in participating jurisdictions that met participation guidelines.

In an effort to expand inclusion in NAEP, the 1998 writing assessment, for the first time, offered testing accommodations to students with disabilities and to students with limited proficiency in English. Some of the accommodations provided were extended time, large-print booklets, or the use of a bilingual dictionary. A total of 4 percent of fourth-grade students, 3 percent of eighthgrade students, and 1 percent of twelfth-grade students were assessed with accommodations. For more information on accommodations, see Appendix A, which also dicusses sample sizes and participation rates for the national and state-by-state assessments.

## Evaluating Students' Writing on the NAEP Assessment

All student responses in the NAEP 1998 writing assessment were evaluated according to criteria set forth in scoring guides that described six levels of performance. Scoring guides were developed for each grade and each purpose for writing (narrative, informative, and persuasive). Thus, for example, the same scoring guide was used for all grade 8 narrative prompts. In addition, specific notes for raters on how responses to each prompt fit the scoring guide were developed. Those notes described different ways in which students approached the prompt, as well as the kinds of responses to that prompt that students tended to write at different levels on the scoring guide.

The scoring guides (presented in Chapter 6) reflect higher expectations for students at higher grade levels. Following the framework, the scoring guides emphasize not only the student's ability to develop and elaborate ideas, but also the student's ability to organize his or her thoughts and to write grammatically correct prose. The criteria for measuring command of the mechanics of written English differed by grade, but were the same across the three purposes for
writing (narrative, informative, and persuasive) within each grade. Responses to the 50 -minute writing prompts were rated by using the same scoring guides. For those prompts, responses tended to be longer for each level in the scoring guide.

To determine how students plan what they write, NAEP provided a page for students to engage in planning activities. Students' written planning was classified into six categories: rough drafts, outlines, lists, diagrams, pictures, and multiple forms (which incorporated two or more of the listed categories). Since the timed assessment context provides limited opportunity to plan and revise one's work, however, students' responses to assessment tasks were viewed as first-draft writing and evaluated accordingly. The scoring guides required raters to consider each response's elaboration of ideas, organization, and control of mechanics to judge the overall quality of writing in the response. A wide variety of student approaches to each prompt was accepted.

## Reporting the Writing Assessment Results

Because the NAEP assessment selects a representative sample of students in order to survey the nation, and because the broad field of writing is addressed through many prompts, each student participating cannot be expected to respond to all of the prompts in the assessment. That would impose an unreasonable burden on students and their schools. Thus, each student was administered a portion of the assessment, and data were combined across students to report on the achievement of fourth, eighth, and twelfth graders and on the achievement of subgroups of students (e.g., subgroups defined by gender or level of parental education).

Student responses to the writing prompts were analyzed to determine the percentage of students achieving each of the ratings ( 1 through 6 on a 6 -level scoring guide) for those prompts. The twenty 25 -minute prompts in the writing assessment at each grade were not equally difficult for students, nor does writing in response to any particular prompt fully reflect writing performance in general. Item response theory (IRT) methods were used to measure the general writing skills that underlie performance across all the prompts, resulting in an overall scale for each of the grades - 4,8 , and 12 . Average scale scores presented in this report are based on this overall scale. Note that the 50 -minute prompts were not included on the scale.

For each grade, the range of the scale was 0 to 300 , and the national average was set at 150 . While the scale-score ranges are identical across grades, the scale was derived independently for each grade. Since, as the framework for the writing assessment specifies, separate scoring guides were used for each grade, performance for each grade had to be scaled separately. Therefore, average scale scores cannot be compared across grades. For example, equal scale scores on the
grade 4 and grade 8 scales do not imply equal levels of writing achievement. However, this scale does make it possible to compare writing scale scores for the nation for subgroups of students at a particular grade. It also allows for comparisons across the jurisdictions participating in the state-by-state assessment. (Additional details of the scaling procedures can be found in Appendix A.)

The average scale score provides information on what students know and can $d o$. In addition to the NAEP writing scale, results are also reported by using the writing achievement levels as authorized by the NAEP legislation and adopted by the National Assessment Governing Board (NAGB). The achievement levels are performance standards based on the collective judgments of experts about what students should know and be able to do. The levels were developed by a broadly representative panel that included teachers, education specialists, and members of the general public. For each grade tested, NAGB has adopted three achievement levels: Basic, Proficient, and Advanced. For reporting purposes, the achievement level cut scores for each grade are placed on the NAEP writing scale, resulting in four ranges: below Basic, Basic, Proficient, and Advanced.

## The Setting of Achievement Levels

The 1988 NAEP legislation that created the National Assessment Governing Board directed the Board to identify "appropriate achievement goals . . . for each subject area" that NAEP measures. ${ }^{7}$ The 1994 NAEP reauthorization reaffirmed many of the Board's statutory responsibilities, including "developing appropriate student performance standards for each age and grade in each subject area to be tested under the National Assessment." ${ }^{8}$ In order to follow this directive and achieve the mandate of the 1988 statute "to improve the form and use of NAEP results," the Board undertook the development of student performance standards (called "achievement levels"). Since 1990, the Board has adopted achievement levels for mathematics, reading, U.S. history, world geography, and science, and, for the first time for the 1998 assessment, writing. It has also developed achievement levels for the 1998 civics assessment.

The Board defined three levels for each grade: Basic, Proficient, and Advanced. The Basic level denotes partial mastery of the knowledge and skills that are fundamental for proficient work at a given grade. The Proficient level represents solid academic performance. Students reaching this level demonstrate competency over challenging subject matter. The Advanced level signifies superior performance at a given grade. For each grade, the levels are cumulative;

[^3]that is, abilities achieved at the Proficient level presume mastery of abilities associated with the Basic level, and attainment of the Advanced level presumes mastery of both the Basic and Proficient levels. Figure i. 2 presents the policy definitions of the achievement levels that apply across grades and subject areas. (Specific descriptions of writing achievement for the levels at each grade are presented in Chapter 1.) Adopting three levels of achievement for each grade signals the importance of looking at more than one standard of performance. The Board believes, however, that all students should reach the Proficient level; the Basic level is not the desired goal, but rather represents partial mastery that is a step toward Proficient.

Figure i. 2
Achievement level policy definitions

|  | This level denotes partial mastery of prerequisite knowledge and skills <br> that are fundamental for proficient work at each grade. |
| :---: | :--- |
| Proficient | This level represents solid academic performance for each grade assessed. <br> Students reaching this level have demonstrated competency over <br> challenging subject matter, including subject-matter knowledge, application <br> of such knowledge to real-world situations, and analytical skills appropriate <br> to the subject matter. |
| Advanced | This level signifies superior performance. |

The achievement levels in this report were adopted by the Board based on a standard-setting process designed and conducted under a contract with American College Testing (ACT). To develop these levels, ACT convened a cross section of educators and interested citizens from across the nation and asked them to judge what students should know and be able to do relative to the view of writing reflected in the NAEP assessment framework for writing. This achievement-level-setting process was reviewed by an array of individuals including policymakers, representatives of political organizations, teachers, parents, and other members of the general public. Prior to adopting these levels of student achievement, NAGB engaged a large number of persons to comment on the recommended levels and to review the results.

The results of the achievement-level-setting process, after NAGB approval, are a set of achievement level descriptions and a set of achievement level cut points on the 300 -point NAEP scale for writing, as well as a set of exemplars of student performance at each achievement level. The cut points are the scores that define the boundaries between below Basic, Basic, Proficient, and Advanced performance at grades 4,8 , and 12 . For further details of the achievement-level-setting process, see the NAEP 1998 Technical Report.

## The Developmental Status of Achievement Levels

The 1994 NAEP reauthorization law requires that the achievement levels be used on a developmental basis until the Commissioner of Education Statistics determines that the achievement levels are "reasonable, valid, and informative to the public." ${ }^{9}$ Until that determination is made, the law requires the Commissioner and the Board to make clear the developmental status of the achievement levels in all NAEP reports.

In 1993, the first of several congressionally mandated evaluations of the achievement-level-setting process concluded that the procedures used to set the achievement levels were flawed and that the percentage of students at or above any particular achievement level cut point may be underestimated. ${ }^{10}$ Others have critiqued these evaluations, asserting that the weight of the empirical evidence does not support such conclusions. ${ }^{11}$

In response to the evaluations and critiques, NAGB conducted an additional study of the 1992 achievement levels in reading before deciding to use those levels for reporting 1994 NAEP results. ${ }^{12}$ When reviewing the findings of this study, the National Academy of Education (NAE) Panel expressed concern about what it saw as a "confirmatory bias" in the study and about the inability of this study to "address the panel's perception that the levels had been set too high." ${ }^{13}$

[^4]In 1997, the NAE Panel summarized its concerns with interpreting NAEP results based on the achievement levels as follows:

First, the potential instability of the levels may interfere with the accurate portrayal of trends. Second, the perception that few American students are attaining the higher standards we have set for them may deflect attention to the wrong aspects of education reform. The public has indicated its interest in benchmarking against international standards, yet it is noteworthy that when American students performed very well on a 1991 international reading assessment, these results were discounted because they were contradicted by poor performance against the possibly flawed NAEP reading achievement levels in the following year. ${ }^{14}$

The NAE Panel report recommended "that the current achievement levels be abandoned by the end of the century and replaced by new standards . . . ." The National Center for Education Statistics and the National Assessment Governing Board have sought and continue to seek new and better ways to set performance standards on NAEP. For example, NCES and NAGB jointly sponsored a national conference on standard setting in large-scale assessments, which explored many issues related to standard setting. ${ }^{15}$ Although new directions were presented and discussed, a proven alternative to the current process has not yet been identified. The Acting Commissioner of Education Statistics and NAGB continue to call on the research community to assist in finding ways to improve standard setting for reporting NAEP results.

The most recent congressionally mandated evaluation conducted by the National Academy of Sciences (NAS) relied on prior studies of achievement levels, rather than carrying out new evaluations, on the grounds that the process has not changed substantially since the initial problems were identified. Instead, the NAS Panel studied the development of the 1996 science achievement levels. The NAS Panel basically concurred with earlier congressionally mandated studies. The Panel concluded that "NAEP's current achievement-level-setting procedures remain fundamentally flawed. The judgment tasks are difficult and confusing; raters' judgments of different item types are internally inconsistent; appropriate validity evidence for the cut scores is lacking; and the process has produced unreasonable results." ${ }^{16}$

[^5]The NAS Panel accepted the continuing use of achievement levels in reporting NAEP results only on a developmental basis, until such time as better procedures can be developed. Specifically, the NAS Panel concluded that ". . . tracking changes in the percentages of students performing at or above those cut scores (or in fact, any selected cut scores) can be of use in describing changes in student performance over time. ${ }^{17}$ In a recent study, eleven testing experts who provided technical advice for the achievement-levelsetting process provided a critical response to the NAS report. ${ }^{18}$

The National Assessment Governing Board urges all who are concerned about student performance levels to recognize that the use of these achievement levels is a developing process and is subject to various interpretations. The Board and the Acting Commissioner of Education Statistics believe that the achievement levels are useful for reporting on trends in the educational achievement of students in the United States. In fact, achievement level results have been used in reports by the President of the United States, the Secretary of Education, state governors, legislators, and members of Congress. The National Education Goals Panel and government leaders in the nation and in more than 40 states use these results in their annual reports.

However, based on the congressionally mandated evaluations so far, the Acting Commissioner agrees with the recommendation of the National Academy of Sciences that caution needs to be exercised in the use of the current achievement levels. Therefore, the Acting Commissioner concludes that these achievement levels should continue to be considered developmental and should continue to be interpreted and used with caution.

[^6]
## Interpreting NAEP Results

The average scores and percentages presented in this report are estimates because they are based on samples rather than the entire population(s). As such, the results are subject to a measure of uncertainty, reflected in the standard errors of the estimates. The standard errors for the estimated scale scores and percentages provided throughout this report are provided in Appendix B.

The differences between scale scores and between percentages discussed in the following chapters take into account the standard errors associated with the estimates. The comparisons are based on statistical tests that consider both the magnitude of the difference between the group average scores or percentages and the standard errors of these statistics. Throughout this report, differences are defined as significant when they are significant from a statistical perspective. This means that observed differences are unlikely to be due to chance factors associated with sampling variability. The term "significant" is not intended to imply a judgment about the absolute magnitude or educational relevance of the differences. It is intended to identify statistically dependable population differences in order to help focus subsequent dialogue among policymakers, educators, and the public. All differences reported are significant at the .05 level, with appropriate adjustments for multiple comparisons.

## Cautions in Interpretation

The reader is cautioned against using the NAEP results in this report to make simple causal inferences related to subgroup performance, to the effectiveness of public and nonpublic schools, or to state educational systems. A relationship that exists between performance and another variable does not reveal the underlying cause of that relationship, which may be influenced by a number of other variables. Differences in writing performance may reflect a range of socioeconomic and educational factors not discussed in this report or addressed by the NAEP assessment program. Similarly, differences between public and nonpublic schools may be better understood by considering such factors as composition of the student body and parental involvement. Finally, differences in writing performance among states and jurisdictions may reflect not only the effectiveness of education programs, but also the challenges posed by economic constraints and student demographic characteristics.

## CHAPTER 1

## Average Scale Score and Achievement Level Results for the Nation

## Overview

This chapter presents the results of the National Assessment of Educational Progress (NAEP) 1998 writing assessment for the nation. Student performance is described in terms of average scores on the NAEP writing scale, which ranges from 0 to 300, and in terms of the percentages of students who attained each of the three writing achievement levels: Basic, Proficient, and Advanced. The chapter also includes samples of student writing on the assessment that were selected to exemplify performance within each achievement level range. Three exemplar papers representing the three achievement levels are presented for each grade. Additional sample student responses are provided in Chapter 6.

## Explanation of Average Scale Score Results for the Nation

The NAEP writing assessment measured students' writing with a range of prompts at each grade. Item Response Theory (IRT) methods were used to produce a scale for each grade that summarizes the results from those prompts. The scale at each grade ranges from 0 to 300 , with a national average of 150 . Item Response Theory uses a set of statistical models to summarize student performance across a group of assessment questions requiring similar knowledge and skills. In the context of the writing assessment, IRT methods were used to create summary scales that relate students' performance on the writing prompts to their general writing skill as measured by the assessment.

The NAEP writing scales can be used to compare the performance of subgroups of students within a grade (for instance, eighth graders who reported different levels of parental education). The scales do not allow for comparisons of performance across grades. For example, comparisons between the average scale scores of fourth and eighth graders attending nonpublic schools would not be meaningful. Additional information about the scaling procedures used in the NAEP 1998 writing assessment can be found in Appendix A of this report and in the forthcoming NAEP 1998 Technical Report.

Table 1.1 presents the scale scores attained by students at several percentiles. It shows the writing scale scores for students at the $10^{\text {th }}, 25^{\text {th }}, 50^{\text {th }}, 75^{\text {th }}$, and $90^{\text {th }}$ percentiles at each grade. These data provide some indication of the range of student performance, from lower performance ( $10^{\text {th }}$ percentile) to higher performance ( $90^{\text {th }}$ percentile).

| Average | $10^{\text {th }}$ <br> percentile | 25 <br> percentile | 50 th <br> percentile | $\mathbf{7 5}^{\text {th }}$ <br> percentile | $90^{\text {th }}$ <br> percentile |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Grade 4 | 150 | 105 | 126 | 151 | 174 | 195 |
| Grade 8 | 150 | 104 | 127 | 151 | 175 | 194 |
| Grade 12 | 150 | 104 | 126 | 150 | 174 | 195 |

SOURCE: National Center for Education Statistics, National Assessment of Educational Progress (NAEP), 1998 Writing Assessment.

## Achievement Level Results for the Nation

The results of student performance are reported using not only average scores on the NAEP writing scale, but also writing achievement levels as authorized by the NAEP legislation ${ }^{1}$ and as adopted by the National Assessment Governing Board (NAGB). Viewing students' performance from this perspective provides some insight into the adequacy of students' knowledge and skills and the extent to which they achieved expected levels of performance.

In 1999, NAGB reviewed and adopted the recommended writing achievement levels, which were derived from the judgments of a broadly representative panel that included teachers, education specialists, and members of the general public. For each grade tested, the Board has adopted three achievement levels: Basic, Proficient, and Advanced. For reporting purposes, the writing achievement level cut scores for each grade are placed on the NAEP writing scale, resulting in four ranges: below Basic, Basic, Proficient, and Advanced. Figures 1.1-1.3 present the specific descriptions of writing achievement levels at each grade. In the description of each achievement level, the italicized portion presents a summary of the complete description of that level. Note also that, in these descriptions, the term "writing task" is equivalent to "writing prompt."

[^7]
## Figure 1.1

## Writing achievement levels, grade 4

The following statements describe the kinds of things fourth-grade students should be able to do in writing at each level of achievement. These statements should be interpreted with the constraints of the National Assessment of Educational Progress in mind. Student performances reported with respect to these descriptions are in response to two age-cppropriate writing tasks completed within 25 minutes each. Students are not advised of the writing tasks in advance nor engaged in pre-writing instruction and preparation; however, they are given a set of "ideas for planning and reviewing" their writing for the assessment. Although the Writing NAEP cannot fully assess students' abilities to produce a polished piece of writing, the results do provide valuable information about students' abilities to generate writing in response to a variety of purposes, tasks, and audiences within a rather limited period of time.

Basic Fourth-grade students performing at the Basic level should be able to produce a somewhat organized and detailed response within the time allowed that shows a general grasp of the writing fask they have been assigned. Fourth-grade students performing at the Basic level should be able to produce a somewhat organized response within the time allowed that shows a general grasp of the writing task they have been assigned. Their writing should include some supporting details. Its grammar, spelling, and capitalization should be accurate enough to communicate to a reader, although there may be mistakes that get in the way of meaning.

Proficient Fourth-grade students performing at the Proficient level should be able to produce an organized response within the time allowed that shows an understanding of the writing task they have been assigned. Their writing should include details that support and develop their main idea, and it should show that these students are aware of the audience they are expected to address.
Fourth-grade students performing at the Proficient level should be able to produce an organized response within the time allowed that shows an understanding of the writing task they have been assigned. Their writing should include details that support and develop the main idea of the piece, and its form, content, and language should show that these students are aware of the audience they are expected to address. The grammar, spelling, and capitalization in the work should be accurate enough to communicate to a reader; there may be some mistakes, but these should not get in the way of meaning.

Advanced Fourth-grade students performing at the Advanced level should be able to produce an effective, well developed response within the time allowed that shows a clear understanding of the writing task they have been assigned and the audience they are expected to address. Their writing should include details and be clearly organized, should use precise and varied language, and may show signs of analytical, evaluative, or creative thinking.
Fourth-grade students performing at the Advanced level should be able to produce an effective, well developed response within the time allowed that shows a clear understanding of the writing task they have been assigned. Their writing should be clearly organized, making use of techniques such as consistency in topic or theme, sequencing, and a clearly marked beginning and ending. It should make use of precise and varied language to speak to the audience the students are expected to address, and it should include details and elaboration that support and develop the main idea of the piece. Their writing may also show signs of analytical, evaluative, or creative thinking. The grammar, spelling, and capitalization in the work should be accurate enough to communicate clearly; mistakes should be so few and so minor that a reader can easily skim over them.

## Figure 1.2

## Writing achievement levels, grade 8

The following statements describe the kinds of things eighth-grade students should be able to do in writing at each level of achievement. These statements should be interpreted with the constraints of the National Assessment of Educational Progress in mind. Student performances reported with respect to these descriptions are in response to two age-appropriate writing tasks completed within 25 minutes each. Students are not advised of the writing tasks in advance nor engaged in pre-writing instruction and preparation; however, they are given a set of "ideas for planning and reviewing" their writing for the assessment. Although the Writing NAEP cannot fully assess students' abilities to produce a polished piece of writing, the results do provide valuable information about students' abilities to generate writing in response to a variety of purposes, tasks, and audiences within a rather limited period of time.

Basic Eighth-grade students performing at the Basic level should be able to produce an effective response within the time allowed that shows a general understanding of the writing task they have been assigned. Their writing should show that these students are aware of the audience they are expected to address, and it should include supporting details in an organized way.
Eighth-grade students performing at the Basic level should be able to produce an effective response within the time allowed that shows a general understanding of the writing task they have been assigned. Their writing should show that these students are aware of the audience they are expected to address, and it should include supporting details in an organized way. The grammar, spelling, punctuation, and capitalization in the work should be accurate enough to communicate to a reader, although there may be mistakes that get in the way of meaning.

Proficient Eighth-grade students performing at the Proficient level should be able to produce a detailed and organized response within the time allowed that shows an understanding of both the writing task they have been assigned and the audience they are expected to address. Their writing should include precise language and varied sentence structure, and it may show analytical, evaluative, or creative thinking.
Eighth-grade students performing at the Proficient level should be able to produce an effective response within the time allowed that shows an understanding of both the writing task they have been assigned and the audience they are expected to address. Their writing should be organized, making use of techniques such as sequencing or a clearly marked beginning and ending, and it should make use of details and some elaboration to support and develop the main idea of the piece. Their writing should include precise language and some variety in sentence structure, and it may show analytical, evaluative, or creative thinking. The grammar, spelling, punctuation, and capitalization in the work should be accurate enough to communicate to a reader; there may be some errors, but these should not get in the way of meaning.

Eighth-grade students performing at the Advanced level should be able to produce a fully developed response within the time allowed that shows a clear understanding of both the writing task they have been assigned and the audience they are expected to address. Their writing should show some analytical, evaluative, or creative thinking and may make use of literary strategies to clarify a point. At the same time, the writing should be clearly organized, demonstrating precise word choice and varied sentence structure.
Eighth-grade students performing at the Advanced level should be able to produce an effective and fully developed response within the time allowed that shows a clear understanding of both the writing task they have been assigned and the audience they are expected to address. Their writing should show some analytical, evaluative, or creative thinking, and should demonstrate precise word choice and varied sentence structure. Their work should include details and elaboration that support and develop the main idea of the piece, and it may make use of strategies such as analogies, illustrations, examples, aneddotes, or figurative language to clarify a point. At the same time, the writing should show that these students can keep their work clearly and consistently organized. Writing by eighth-grade students performing at the Advanced level should contain few errors in grammar, spelling, punctuation, capitalization, and sentence structure. These writers should demonstrate good control of these elements and may use them for stylistic effect in their work.

## Figure 1.3

## Writing achievement levels, grade 12

The following statements describe the kinds of things twelfth-grade students should be able to do in writing at each level of achievement. These statements should be interpreted with the constraints of the National Assessment of Educational Progress in mind. Student performances reported with respect to these descriptions are in response to two age-appropriate writing tasks completed within 25 minutes each. Students are not advised of the writing tasks in advance nor engaged in pre-writing instruction and preparation; however, they are given a set of "ideas for planning and reviewing" their writing for the assessment. Although the Writing NAEP cannot fully assess students' abilities to produce a polished piece of writing, the results do provide valuable information about students' abilities to generate writing in response to a variety of purposes, tasks, and audiences within a rather limited period of time.

Basic Twelfth-grade students performing at the Basic level should be able to produce a well-organized response within the time allowed that shows an understanding of both the writing task they have been assigned and the audience they are expected to address. Their writing should show some analytical, evaluative, or creative thinking, and it should include details that support and develop the main idea of the piece.
Twelfth-grade students performing at the Basic level should be able to produce an effective response within the time allowed that shows an understanding of both the writing task they have been assigned and the audience they are expected to address. Their writing should show some analytical, evaluative, or creative thinking. It should include details that support and develop the central idea of the piece, and it should be clearly organized, making use of techniques such as consistency in topic or theme, sequencing, and a clear introduction and conclusion. The grammar, spelling, punctuation, and capitalization in these students' work should be accurate enough to communicate to a reader; there may be some errors, but these should not get in the way of meaning.

Proficient Twelfth-grade students performing at the Proficient level should be able to produce an effectively organized (178) and fully developed response within the time allowed that uses analytical, evaluative, or creative thinking. Their writing should include details that support and develop the main idea of the piece, and it should show that these students are able to use precise language and variety in sentence structure to engage the audience they are expected to address.
Twelfth-grade students performing at the Proficient level should be able to produce an effective and fully developed response within the time allowed that uses analytical, evaluative, or creative thinking. Their writing should be organized effectively, and it should show that these students have a clear understanding of the writing task they have been assigned. It should be coherent, making use of techniques such as a consistent theme, sequencing, and a clear introduction and conclusion, and it should include details and elaboration that support and develop the main idea of the piece. The writing should show that these students are able to use precise language and variety in sentence structure to engage the audience they are expected to address. Writing by twelfth-grade students performing at the Proficient level should contain few errors in grammar, spelling, punctuation, capitalization, and sentence structure. These writers should demonstrate a command of these elements and may use them for stylistic effect in their work.

Advanced Twelfth-grade students performing at the Advanced level should be able to produce a mature and sophisticated response within the time allowed that uses analytical, evaluative, or creative thinking. Their writing should be detailed and fully developed, and it should show that these students are able to use literary strategies to develop their ideas. At the same time, the writing should be well crafted and coherent, and it should show that these students are able to engage the audience they are expected to address through rich and compelling language, precise word choice, and variety in sentence structure.
Twelfth-grade students performing at the Advanced level should be able to produce a mature and sophisticated response within the time allowed that uses analytical, evaluative, or creative thinking. Their writing should be fully developed, incorporating details and elaboration that support and extend the main idea of the piece. It should show that these students can use literary strategies - anecdotes and repetition, for example - to develop their ideas. At the same time, the writing should be well crafted, organized, and coherent, and it should incorporate techniques such as a consistency in topic or theme, sequencing, and a clear introduction and conclusion. It should show that these writers can engage the audience they are expected to address through rich and compelling language, precise word choice, and variety in sentence structure. Writing by twelfth-grade students performing at the Advanced level should contain few errors in grammar, spelling, punctuation, capitalization, and sentence structure. These writers should demonstrate a sophisticated command of these elements and may use them for stylistic effect in their work.

The NAEP legislation requires that achievement levels be "used on a developmental basis until the Commissioner of Education Statistics determines . . . that such levels are reasonable, valid, and informative to the public. ${ }^{" 2} \mathrm{~A}$ discussion of the developmental status of achievement levels may be found in the Introduction.

The percentages of students at grades 4,8 , and 12 who performed at or above each of the achievement levels are presented in Table 1.2. In reading Table 1.2 , it is necessary to keep in mind that the achievement levels are cumulative. That is, included among students who are considered to be at or above Basic are those who also have achieved the Proficient and Advanced levels of performance, and included among students who are considered to be at or above Proficient are those who have attained the Advanced level of performance. For example, Table 1.2 shows that the percentage of fourth-grade students at or above Basic is 84 percent. The 84 percent includes not only students at the Basic level, but also those who performed at the Proficient and Advanced levels.

As shown in Table 1.2, 84 percent of fourth graders, 84 percent of eighth graders, and 78 percent of twelfth graders were at or above the Basic level in 1998. Performance at or above the Proficient level - the achievement level identified by NAGB as the level that all students should reach - was achieved by 23 percent of students at grade 4,27 percent of students at grade 8 , and 22 percent of students at grade 12. The highest level of performance, Advanced, was attained in 1998 by l percent of students at each of the three grades.

[^8]
## Table 1.2

Percentage of students at or above the writing achievement levels
 for the nation: 1998

| Nation |  |  |  |
| :---: | :---: | :---: | :---: |
| Below Basic | At or above Basic | At or above Proficient | Advanced |
| Grade 4 |  |  |  |
| 16 | 84 | 23 | 1 |
| Grade 8 |  |  |  |
| 16 | 84 | 27 | 1 |
| Grade 12 |  |  |  |
| 22 | 78 | 22 | 1 |

Figure 1.4 also shows achievement level results, but in terms of the percentage of students within each achievement level range. At all three grades, over half of the students were in the Basic achievement level range.

Figure 1.4
Percentage of students within each writing achievement level range for the nation: 1998

NOTE: Percentages may not add to 100, or to the exact percentages at or above achievement levels, due to rounding. SOURCE: National Center for Education Statistics, National Assessment of Educational Progress (NAEP), 1998 Writing Assessment.

## Sample Writing Prompts and Student Responses

This section presents the nine prompts released to the public, along with student responses that exemplify the three achievement levels for each grade. Commentary on each exemplar response is also provided.

The tables in this section present, for each exemplar response, the percentages of students within each achievement level range (Basic, Proficient, and Advanced) who achieved the same rating on the prompt as the exemplar response or better. The overall percentages presented in these tables include students who were considered below Basic, as well as students in each of the achievement level ranges. The achievement level ranges are linked to their corresponding points on the NAEP scale. Because of the small number of students who attained the Advanced level, percentages for the scale score ranges corresponding to Advanced cannot be reliably reported for the three grades and thus are not presented.

These student responses were chosen by the teachers, other educators, professional writers, and members of the public who set the achievement levels. Sample papers were eligible for selection as exemplars if they met a statistical criterion - among the range of students in the achievement level, the average proportion achieving the given rating or better had to be at least 50 percent. The panelists selected from among the statistically eligible student papers those papers that served as appropriate illustrations of the achievement level descriptions. The achievement levels apply to the writing scale in general, not to individual prompts. Because some items are more difficult than others, a rating of "Uneven" in response to one prompt, for example, may be equivalent to a rating of "Sufficient" on another. As a result, a response rated "Uneven" may have been chosen as a Basic exemplar for one prompt, while a response rated "Sufficient" may have been chosen as a Basic exemplar for another prompt. The ratings on the six-level scoring guides are reprinted below for reference. The full scoring guides are presented in Chapter 6.

The achievement levels do not describe performance below the Basic level. Chapter 6 presents additional information about the evaluation of the full range of student responses. It includes, for one prompt at each grade, a sample student response for each of the six ratings on the scoring guide.

## Scoring Guide Ratings

$6=$ Excellent
5 = Skillful
4 = Sufficient
3 = Uneven
2 = Insufficient
1 = Unsatisfactory

Sample Prompts and Exemplar Student Responses - Grade 4

## Fourth-Grade Prompt: Favorite Object

We all have favorite objects that we care about and would not want to give up.

Think of one object that is important or valuable to you. For example, it could be a book, a piece of clothing, a game, or any object you care about.

Write about your favorite object. Be sure to describe the object and explain why it is valuable or important to you.

Writing Purpose: Informative
Responses to this prompt were rated according to the grade 4 informative scoring guide.

In response to the "Favorite Object" prompt (an informative prompt at grade 4 ), fourth graders chose a variety of objects, some of which were actually people or pets or activities such as games rather than objects. All of the above kinds of responses were accepted. Some students told stories about their favorite objects, while others described their object's qualities. A similar prompt that was given at grade 12 is presented later in this chapter.

The sample that follows was judged to be an exemplar of performance at the Basic achievement level on this prompt. It is somewhat organized and provides some details about the student's dog, "max," the "black rockwaller." The student describes, for example, how Max behaves differently around people who know him than around those who do not. The student uses some good description of Max's response when someone he knows comes home: "as soon as you open come running out jump all over you and he would play with you." The student's meaning is generally clear, although some problems with grammar and sentence boundaries leave gaps which the reader has to fill in: "he is playfull if you know him if you don't do not go near bark, growl, run you over . . . ." This essay was rated "Uneven" (3 on the 6-point scoring guide).

## Sample Fourth-Grade Basic Response

 pant calulabe object max.

## Table 1.3

## Grade 4: Favorite Object

## Fourth-Grade Prompt: Castle

One morning a child looks out the window and discovers that a huge castle has appeared overnight. The child rushes outside to the castle and hears strange sounds coming from it. Someone is living in the castle!

The castle door creaks open. The child goes in.
Write a story about who the child meets and what happens inside the castle.

Writing Purpose: Narrative
Responses to this prompt were rated according to the grade 4 narrative scoring guide.

The sample that follows was chosen as an exemplar of performance at the Proficient achievement level for this fourth-grade narrative prompt. The imagination of fourth graders was very much in evidence in responses to this prompt, "Castle," which tended to elicit fast-paced stories of fictional events. In the sample provided, the student provides a clear, organized response. He or she writes a clearly-constructed story with some illustrative details that make it more vivid, like that of the "purple, pink, red, blue, orange and yellow rainbow." Since raters were instructed not to penalize responses that lacked an ending, given the time constraints of the assessment, this response was not penalized for the lack of a conclusion to the plot. The student provides some good plot development and some suspense: "He looked around and saw that there must be someone living here." The student has good control of sentence boundaries and does not stray from the clear sequence of actions provided. This essay was rated "Sufficient" (4 on the 6-point scoring guide).

 velour rainboris tie decided to get vp. These he ont dressed and went to see cu hat was in the castle. "Se wolfed to the door and semocleed motor answered so the knocked again till no surer.
Then the boy went in It rutaide of the color: le looked around and sour that the o must be someone listing here. It very dean he could see that it was clean in the dare
 the ugly monster, and behind him
una a pretty princess, ope uss in love.
I he princess lias tide up.

## Fourth-Grade Prompt: Invisible Friend

Open the envelope labeled $\mathbf{K}$ and take out the letter.
Pretend this letter is from an imaginary friend that you have had since kindergarten. Read the letter. Think about what you could say that would help your friend decide to become visible.

On the lined pages in your test booklet, write a letter to your imaginary friend. Convince your friend to become visible. In your letter, use details and examples.

Writing Purpose: Persuasive
Responses to this prompt were rated according to the grade 4 persuasive scoring guide.

The following sample was chosen as an exemplar of performance at the Advanced achievement level for this fourth-grade persuasive prompt, "Invisible Friend." The prompt asked students to respond to a letter from an imaginary invisible friend, providing reasons why that friend should become visible. This example contains detailed development of reasons why the invisible friend should become visible: "If you do come visible you would love my room so much if you like flowers. I have green walls and flower boarder walls; It is so pretty!" The student clearly writes to be persuasive and has a good sense of audience. The details covered here include a variety of activities, examples of people who would be friends with the invisible friend, and the description of the student's room where the invisible friend would stay. The response is wellstructured, with a clear beginning and ending. The student has good control of sentence boundaries, using a variety of sentence structures, and uses rhetoric effectively to make points: "Something that is great about being visible is that all kids I know are so nice. I want you to become visible. Please do!" This response was rated "Skillful"( 5 on the 6 -point scoring guide).

Dear Invisible Friend, Thank you for writing to me in my imagination. I wanted to Say Happy Birthday and also to give some advice to turning visible. Here comes the advice. OK, my mom and dad could adopt you and take care of you just like a real child. We could have lots of fun together and maybe we could even share a room. We alsi could still be friends and a sister to me and my family. You and I could go to the same school and maybe even the same class. If your nice enough, which I know you are, You could make some nice, new, friends. We also have a lot of Kids in the neighborhood, so you could also make a lot of nice, new, friends in the neighborhood. If you do come visible you would love my room So much if you like flowers. I have green walls and flowers boarder walls; It is so pretty! One reason I want you to become visible is because.

## Sample Fourth-Grade Advanced Response (continued)

 reason to become visible because in all of the family, espically mine, they love you and Kiss you and hug you to death. Something that is great about being visible is that all kids I know are so nice. I want you to become visible. Please do!

Sample Prompts and Exemplar Student Responses - Grade 8

## Eighth-Grade Prompt: Space Visitor

Imagine this situation!
A noise outside awakens you one night. You look out the window and see a spaceship. The door of the spaceship opens, and out walks a space creature. What does the creature look like? What does the creature do? What do you do?

Write a story about what happens next.

Writing Purpose: Narrative
Responses to this prompt were rated according to the grade 8 narrative scoring guide.

The sample below was written in response to the "Space Visitor" prompt, which elicited a wide variety of creative responses from eighth-grade students. Some students focused on the appearance of the visitor. Other students presented the experience as a dream. The sample below was chosen as an exemplar of Basic performance for eighth-grade writing. In this sample, the student tells a coherent story, including both a precise description of the alien - "It was green and was about 3 feet tall" - and some vivid action: "He went up stairs got his peper spray came back down and sprayed the 3 foot alean with it he the put it back on his spaceship and it flew up." Though the story has some errors in grammar and use of sentence boundaries, it does not have many errors that interfere with meaning. This response was rated "Uneven" (3 on the 6-point scoring guide), largely because of problems with sentence boundaries.

One night last Friday there was Something Strange going on. I just thought well, there must be a storm but It also herd Strange noises, noises. I've never here before but I Just went to sleep. About 2 hours later the noises were So loud I woke up it was the strangest noise you Could ever hear. I got up and went down Stairs I herd the noises outside so I opened the front door walked out Side I herd it then in the back so I walked walked to the back and to my Suprize their was an Alein It was green and was about 3 feet tall So I was a little relever when I was 2 feet taller then it.

Itwakker sword me. $R$ schemed and yelled Help! Hell me! I Screened my dad woke up came down stairs and noticed the Alian her was starltled to gee it. He went up Stairs got his prefer spray came back down and sprayed the 3 foot Allan with it. he the put it back on his Space Ship and It flew up. I never saw it again but If always moulded If I will ever see it again.

## Eighth-Grade Prompt: Designing a TV Show

A public television network is seeking ideas for a new series of shows that would be educational for teenagers. The series will include ten one-hour episodes and will be shown once a week. Some of the titles under consideration are:
"Great Cities of the World"
"Women in History"
"Nature Walks"
"American Legends"
Choose one of these titles. Write a letter to the network president describing your ideas for a new educational series. In your letter, describe what one episode might be like. Use specific examples of what information you would include in the episode so the network president will be able to imagine what the series would be like.

## Writing Purpose: Informative

Responses to this prompt were rated according to the grade 8 informative scoring guide.

In addition to prompts that used visual material as stimulus (cartoons, drawings, etc.), some prompts asked students to use their visual imaginations in other ways. This eighth-grade prompt, which asked students how they would design an educational television series about a specific subject, encouraged students to describe how they would present information in terms of narrators, settings, dialogue, camera angles, and other aspects of presentation. Students could choose the topic of the series they would design from the list of four topics provided in the prompt or could choose a topic of their own. The prompt asked students to write in the form of a letter to the president of a television network.

The response below was chosen as an exemplar of Proficient writing at the eighth-grade level. This response is characterized especially by its clarity and organized structure. The student provides a clear beginning and ending and a rationale for the show ("There have been many women heroes, and they should be recognized"), as well as an example of one episode from it: "An idea for a show is Anne Frank. You could go to the place where they hid for so long and do the show right there. Everyone will get the chance to see how Anne lived." Though not very lengthy, this response shows a clear understanding of the task, and provides the necessary information to fulfill it. The language is clear and readily comprehensible, despite a few errors. This response was rated "Sufficient" (4 on the 6-point scoring guide).

Sample Eighth-Grade Proficient Response
Dear Mr. President,
I think you should have a
show about "women in history."
Aloft of people want to know about
women and what they've done to help our country. There have been many women heroes, and they should be reconized. iou could do the show like wishbone, except all the shows be about women in history instead of characters from a book. An idea for a Show is Anne Frank. You could go to the place where they hid for so long and do the show right there. Everyone will get the chance to see ho u Ane lived. Alt of people haven't heard or seen herstory. well, it's time theist do! So, please take into consideration my ideas and respond when you make your decision.

## Eighth-Grade Prompt: Lengthening the School Year

Many people think that students are not learning enough in school. They want to shorten most school vacations and make students spend more of the year in school. Other people think that lengthening the school year and shortening vacations is a bad idea because students use their vacations to learn important things outside of school.

What is your opinion?
Write a letter to your school board either in favor of or against lengthening the school year. Give specific reasons to support your opinion that will convince the school board to agree with you.

Writing Purpose: Persuasive
Responses to this prompt were rated according to the grade 8 persuasive scoring guide.

In response to this persuasive prompt, most students argued against lengthening the school year, often with reference to the educational value of vacations and time with family. Others thought lengthening the school year would be a good idea. In the Advanced exemplar shown, the student writes a letter that consistently develops reasons into a cohesive argument. The student points out that there are parts of one's social and cultural education that occur outside of school, and that excessive stress can be counterproductive. Each paragraph is well organized and builds support for the student's point of view. Thus, the student provides a convincing analysis. He or she also uses rhetorical strategies such as irony and refutation of an opposing argument: "Some might say that kids aren't learning enough, and since the future of the nation rests on their shoulders they need to go to school longer and learn more. I say those who are adults now went to school the same amount, if not shorter, of time that we do and they haven't completely ruined the country." This response was rated "Excellent," the top rating ( 6 on the 6 -point scoring guide).

To whom it May Concern,
I've heard about the debate of whether or not to lengthen the school year. I decided to voice my opinion. I believe that the school year should not be lengthened. Kids are stressed out enough with homework and school without adding more. Some might say that Kids aren't learning enough, and since the future of the nation rests on their shoulders they need to go to school longer and learn more. I say those who are adults now went to school the same amount, if not shorter, of time that we do and they haven't completely ruined the country. To make the country better you don't just need to know math, English, and, history; you need to know social skills like getting along with others. You learn social skills at school I but you can learn them just as easily while on vacation. If you go to another country for vacation you learn to accept and respect other cultures. This can help extinguish predujuces.

Sample Eighth-Grade Advanced Response (continued)
If you add more schoolwork and homework Kids will get more stressed out. When you're stressed out you aren't as agreeable and sometimes just give up trying and don't care a difference in the world.

I once heard someone say that you are only a kid for a short time. When you're an adult you have enough stress and
hardly any time. for fun, so -why put stress on kids and make them lose their time for fun, Why turn them into adults before their time?

I completely are with the person who said this. let kids have fun and not be stack in a hot school listening to a lecture, or at home doing homework when they used to be swimming or hanging out with their friends.

Thank you for considering my letter.

Sample Prompts and Exemplar Student Responses - Grade 12

Twelfth-Grade Prompt: Writing Mentor
Your school has a program in which a twelfth grader acts as a mentor for a tenth grader at the beginning of each school year. The mentor's job is to help the tenth grader have a successful experience at your school. The tenth grader you are working with is worried about being able to write well enough for high school classes.

Write a letter to your tenth grader explaining what kind of writing is expected in high school classes and what the student can do to be a successful writer in high school.

As you plan your response, think about your own writing experiences. How would you describe "good" writing? What advice about writing has been helpful to you? What writing techniques do you use?

Writing Purpose: Informative
Responses to this prompt were rated according to the grade 12 informative scoring guide.

The sample shown is an exemplar of Basic performance at the twelfth-grade level. It was written in response to the "Writing Mentor" prompt, an informative prompt that asked students to give advice about writing to a younger student. In their responses, some students described the writing process, others detailed how good writing is defined, and still others described personal experiences with writing to illustrate how they learned to write.

In this Basic exemplar, the student provides a clear sequence of information with some details. The response is relatively brief, but clear and focused. The student offers some details ("Remember to indent when starting paragraphs and use proper punctuation") and provides general organization of his or her points. The response does not use complicated sentence structures, but does have some sentence variety and few errors. This response was rated "Sufficient" (4 on the 6 -point scoring guide).

- Dear Sophomore;

Through out your high school experience you will be asked to write many reports and essays, most of them will be about things you've never heard ob. that's when you head for the encyclopedia. \&l am going to give you a few tips that el picked up from various teachers. First of all, make sure you plan your paper properly. If you just start writing you may run out y ideas really fast another thing you might want to remember is if you are writing a formal paper or report, do not use contractions. It will be counted off. I learned thee hard way. Remember to indent when starting paragraphs and use proper punctuation. If you have any questions feel free to ask me.

Sincerely.
Senior

## Twelfth-Grade Prompt: Special Object

Read the following excerpt from a poem by Walt Whitman.

There was a child who went forth every day, And the first object he look'd upon, that object he became, And that object became part of him for the day or a certain part of the day, Or for many years or stretching cycles of years.

Whitman's poem suggests that certain objects become important to us and remain important to us even if we no longer have them.

Write a story in which you tell about an object that remains important to the main character over a period of years. The main character could be you or someone you know.

In your story, describe the main character's first encounter with the object, why the object is so important to the character, and how, over the years, it remains a part of the character's life.

Writing Purpose: Narrative
Responses to this prompt were rated according to the grade 12 narrative scoring guide.

The next sample, an exemplar of Proficient performance at grade 12, was written in response to the "Special Object" prompt. This prompt, like the "Favorite Object" prompt at grade 4 (shown earlier in this chapter), asked students to identify an important object. In the twelfth-grade version of the prompt, students were asked to write about a character to whom an object was important. Thus, this prompt was classified as narrative, while the fourth-grade prompt, which asked students to describe an object important to them, was informative. Many students in twelfth grade wrote interesting and detailed narratives in response to the prompt. Many alluded to the Whitman poem provided in the prompt, in which, as a child responds to an object, "that object became part of him for the day or a certain part of the day,/Or for many years or stretching cycles of years."

The Proficient exemplar shown is notable for its detailed characterization and description: "I was a young immigrant in an unknown world; everything seemed so vast and unexplainable. I began working in a nearby factory for what seemed to be a phenomenal wage." The student recreates both the moment when the character met her husband and her fond memories of him years later. The object of the wedding ring here is clearly used for symbolic purposes. The transition to memory in the last paragraph conveys the sense, as in Whitman's poem, that the things we love are never really lost to us. This response shows good command of stylistic elements. It does, however, have a gap between the character's first meeting with her husband and his death. This response was rated "Skillful" ( 5 on the 6-point scoring guide).

## Sample Twelfth-Grade Proficient Response

I was 19 years old when I first saw him. I
was a young immigrant in an unknown world; everything secerned so vast and unexplainable.
I began working in a nearby factory for what
seamed to be a phenomenal wage. I was young and fresh and had the world at my fingertips. I carefully walked into my new employment lequipped with a brand new dress) and laid my eyes upon the most handsome yang man I've ever met. Sensing my attraction, ho smiled and unved at me. I nearly fell to the grand.

Later that day we had lunch together. It turns out we wore both new Italian immigrants - the only difference - 1 was from Sicily and he was from Venice. Needless to say we wore off to a wonderful start. Time has passed now, but I still recall september 19th of that year It was a dreary misty day and I trudged into work 20 minutes late. It was $\frac{\text { min }}{2} 20^{\text {th }}$ birthday and 1 was in a barible mood; Nothing was going right until I got to work. By the end of the day I was wearing a-dolicate gold ring on my finger.

## Sample Twelfth-Grade Proficient Response (continued)

Michael is nav deceased. Remembering his charming smile, his witty sense of humor, and his dark brown eyes san't bring him back. The mary trials and tribulations, throughout the good and bad, beyond death will we part, can not bring him back. Even our four wonderful children cant bring him back. As I gaze at my window, I turn to look at mu y hand still wearing that same gold ring from so many years age I smile because I know I don't need to bring him back... I never really lost him.

## Twelfth-Grade Prompt: One Vote

Your school is sponsoring a voter registration drive for 18-year-old high school students. You and three of your friends are talking about the project. Your friends say the following.

Friend 1: " I'm working on the young voters' registration drive. Are you going to come to it and register? You're all 18 , so you can do it. We're trying to help increase the number of young people who vote and it shouldn't be too hard - I read that the percentage of 18- to 20 -year-olds who vote increased in recent years. We want that percentage to keep going up."

Friend 2: "I'll be there. People should vote as soon as they turn 18. It's one of the responsibilities of living in a democracy."

Friend 3: "I don't know if people should even bother to register. One vote in an election isn't going to change anything."

Do you agree with friend 2 or 3 ? Write a response to your friends in which you explain whether you will or will not register to vote. Be sure to explain why and support your position with examples from your reading or experience. Try to convince the friend with whom you disagree that your position is the right one.

Writing Purpose: Persuasive
Responses to this prompt were rated according to the grade 12 persuasive scoring guide.

This twelfth-grade persuasive prompt, "One Vote," provided context for a debate about the importance of voting by presenting a conversation among three friends about whether or not it is important to register and vote when one turns 18. Students were asked to participate in the debate by responding to the friends described in the prompt. Some students responded in letter format. Some addressed both sides of the debate, discussing both Friend 2's contention that "People should vote as soon as they turn 18" and Friend 3's view that "One vote in an election isn't going to change anything."

The following response was chosen as an exemplar of Advanced performance at grade 12, and received the top rating of "Excellent" ( 6 on the six-point scoring guide). A sophisticated command of rhetoric is evident throughout. The student notes that the question of whether one vote could sway an election is not as significant as the issue of the importance of voting overall. He or she consistently supports points with details or examples, uses transitions throughout, and exhibits good control of language.

Sample Twelfth-Grade Advanced Response
Whether a single person's vote hakes a difference in an election is irretevout. a democratic nation is one that recognizes an individual right to think and formulate an opinion, and voting is a manifestation of that right.

Mankind, the acknowledged ruler of the Earth, has little advantage over the other lifeforms he shares existence with. As pointed out in the play Inherit the wind, the horse is swifter, the mosquito more prolific, even a simple sponge is mure durable. What separates mankind from other species is his simple brain-power: his ability to think

The founding fathers of america recognized the fatal flaw of other nations - foolish monarchs who calmed absolute authority over their subjects Dictatorial societies have the same root cause of their downfall- the attempts of squelching out personal opinion. Voting celebrates the freedom the nation received on July 4, 1776. voting is not a duty or a chore, it is a priveledge that we as humans have as our only advantage. We have the right and fortunantely because of democratic society, the freedom to think.

## Summary

$>$ In the 1998 NAEP writing assessment, average scores for the nation were set at 150 on a scale of 0 to 300 for all grades assessed ( 4,8 , and 12).

In 1998, at grade 4, 23 percent of students achieved the Proficient level or higher on the writing assessment. Eighty-four percent of fourth-grade students achieved the Basic level or higher, and 1 percent of students achieved the Advanced level. At grade 8, 27 percent of students achieved the Proficient level or higher on the writing assessment. Eighty-four percent of students at grade 8 achieved the Basic level or higher, and 1 percent of students achieved the Advanced level. At grade 12, 22 percent of students achieved the Proficient level or higher on the writing assessment. Seventyeight percent of twelfth-grade students achieved the Basic level or higher, and 1 percent of students achieved the Advanced level.

## CHAPTER 2

## Overview

This chapter presents average writing scale score results for various subgroups of students. The findings are summarized on the National Assessment of Educational Progress (NAEP) writing scale, which has a range of 0 to 300 . An examination of the score patterns of these subgroups provides insight into how general patterns of writing performance are related to certain background characteristics. Results are reported by gender, race/ethnicity, parental education, region, type of location, eligibility for the Free/Reduced-Price School Lunch Program, and type of school. Achievement level results for the same subgroups are presented in Chapter 3.

The differences reported between subgroups for the 1998 assessment are based on statistical tests that consider both the magnitude of the difference between the subgroups' average scores or percentages and the standard errors of the statistics. Throughout the chapter, differences are discussed only if they were determined to be statistically significant. ${ }^{1}$

In interpreting subgroup results, the reader is reminded that differences in writing performance reflect a range of socioeconomic and educational factors not discussed in this report or addressed by the NAEP assessment program. A complex array of factors combine to affect students' achievement and their performance on measures of writing achievement. Important issues such as opportunities to learn and sociocultural environmental factors must be considered in interpreting these differences. ${ }^{2}$ Therefore, readers should avoid making simple or causal inferences based on these data.

[^9]
## Gender

Table 2.1 shows the 1998 average writing scale scores for males and females. In this table and in all the tables in this chapter, the percentage of students in each subgroup (for example, the percentage of female students who took the NAEP writing assessment) is presented next to the average scale score.

At all three grades, female students had higher average scale scores than their male peers. Research has shown that females have achieved higher scale scores than males on a variety of previous writing assessments. ${ }^{3}$ On the NAEP 0 -to- 300 writing scale, the difference between scores for female and male students was 16 points at grade 4,20 points at grade 8 , and 19 points at grade 12 .

## Table 2.1

Average writing scale scores by gender: 1998

NOTE: Percentages may not add to 100 due to rounding. SOURCE: National Center for Education Statistics, National Assessment of Educational Progress (NAEP), 1998 Writing Assessment.

## Race/Ethnicity

As part of the background questionnaire administered with the NAEP 1998 writing assessment, students were asked to indicate the racial/ethnic subgroup that best described them. The mutually exclusive response options were: White, Black, Hispanic, Asian/Pacific Islander, and American Indian (including Alaskan Native).

[^10]The 1998 average writing scale scores for students in racial/ethnic subgroups are presented in Table 2.2. As in previous NAEP assessments in a variety of academic subjects, differences in writing performance among racial/ ethnic groups were evident at all three grades.

At grade 4, Asian/Pacific Islander students had higher scale scores than all other groups. Also at grade 4, White students outperformed Black, Hispanic, and American Indian students, and American Indian students outperformed their Black peers. At grades 8 and 12, Asian/Pacific Islander and White students had higher scores than their peers in the other groups.

## Table 2.2

Average writing scale scores by race/ethnicity: 1998

|  | Percentage of students | Average scale score |
| :---: | :---: | :---: |
|  | Grade 4 |  |
| White | 67 | 157 |
| Black | 15 | 131 |
| Hispanic | 13 | 134 |
| Asian/Pacific Islander | 2 | 164 |
| American Indian | 2 | 138 |
|  | Grade 8 |  |
| White | 67 | 158 |
| Black | 14 | 131 |
| Hispanic | 14 | 131 |
| Asian/Pacific Islander | 3 | 159 |
| American Indian | 1 | 132 |
|  | Grade 12 |  |
| White | 69 | 156 |
| Black | 14 | 134 |
| Hispanic | 12 | 135 |
| Asian/Pacific Islander | 4 | 152 |
| American Indian | 1 | 129 |

NOTE: Percentages may not add to 100 due to rounding. SOURCE: National Center for Education Statistics, National Assessment of Educational Progress (NAEP), 1998 Writing Assessment

## Parents' Highest Level of Education ${ }^{4}$

Parents have a strong influence on their children's education, as shown by previous NAEP assessments and many other studies. ${ }^{5}$ Chapter 4 explores the influence of several home factors on students' achievement in writing, including the importance of parents' talking to their children about their studies.

Many studies have also shown that, generally, the higher the parents' level of education, the higher their children's performance. This was also true for the NAEP writing assessment. For this analysis, the highest level of education reported for either parent was used. Generally, at all three grades, the higher the parents' level of education, the higher the students' scale scores. At grade 12, this held true for every level. At grades 4 and 8 , the average scores of students whose parents had some education after high school were similar to those of students whose parents graduated from high school. In addition, generally at all three grades, students who did not know their parents' highest level of education had lower scale scores than those who did.

These results should be placed in some context. Note that some research has questioned the accuracy of student-reported data on parental education; therefore, caution should be used in interpreting the findings. ${ }^{6}$ Also, note that eleven percent of fourth graders, 3 percent of eighth graders, and 1 percent of twelfth graders reported not knowing their parents' educational level. Finally, parental education may be related to higher income, which could affect educational opportunities.

[^11]
## Table 2.3

Average writing scale scores by parents' highest level of education: 1998

|  | Percentage of students | Average scale score |
| :---: | :---: | :---: |
|  | Grade 4 |  |
| Graduated from college | 57 | 153 |
| Some education after high school | 16 | 149 |
| Graduated from high school | 12 | 150 |
| Did not finish high school | 3 | 136 |
| I don't know. | 11 | 139 |
|  | Grade 8 |  |
| Graduated from college | 50 | 159 |
| Some education after high school | 27 | 145 |
| Graduated from high school | 15 | 145 |
| Did not finish high school | 5 | 130 |
| I don't know. | 3 | 117 |
|  | Grade 12 |  |
| Graduated from college | 52 | 159 |
| Some education after high school | 27 | 145 |
| Graduated from high school | 14 | 142 |
| Did not finish high school | 6 | 128 |
| I don't know. | 1 | 113 |

NOTE: Percentages may not add to 100 due to rounding. SOURCE: National Center for Education Statistics, National Assessment of Educational Progress (NAEP), 1998 Writing Assessment.

## Region of the Country

Table 2.4 presents results by four regions of the country: Northeast, Southeast, Central, and West. The composition of the regions is described in Appendix A.

Comparisons of scale scores show differing performance by region. At grades 4 and 8 , students in the Northeast and Central regions had higher average scale scores than their peers in the Southeast and West. At grade 12, students in the Southeast had lower scores than those in the three other regions. It should be noted that many of the differences in performance by region, though statistically significant, were small.

## Table 2.4

Average writing scale scores by region: 1998

|  | Percentage of students | Average scale score |
| :---: | :---: | :---: |
|  | Grade 4 |  |
| Northeast | 23 | 154 |
| Southeast | 25 | 146 |
| Central | 24 | 156 |
| West | 27 | 145 |
|  | Grade 8 |  |
| Northeast | 21 | 155 |
| Southeast | 25 | 145 |
| Central | 25 | 155 |
| West | 29 | 146 |
|  | Grade 12 |  |
| Northeast | 22 | 152 |
| Southeast | 23 | 144 |
| Central | 25 | 153 |
| West | 29 | 151 |

NOTE: Percentages may not add to 100 due to rounding.
SOURCE: National Center for Education Statistics,
National Assessment of Educational Progress (NAEP), 1998 Writing Assessment.

## Type of Location

Another way to look at student performance is by the location of their schools. Again, a complex variety of factors, including socioeconomic factors and availability of resources in schools, is represented by school location. The three types of location - central city, urban fringe/large town, and rural/small town - are based on Census Bureau definitions of metropolitan statistical areas, population size, and density. These classifications, based solely on geographic characteristics, are described in Appendix A.

As Table 2.5 shows, fourth- and eighth-grade students in central city schools had lower average scale scores than their peers in the other locations. At grades 8 and 12, students in urban fringe/large town schools had higher average scale scores than those in rural/small town schools. At grade 12, the average scores of students in central city schools did not differ significantly from those of their peers attending schools in other locations.

## Table 2.5

Average writing scale scores by type of location: 1998

|  | Percentage of students | Average scule score |
| :---: | :---: | :---: |
|  | Grade 4 |  |
| Central city | 35 | 145 |
| Urban fringe/large town | 36 | 154 |
| Rural/small town | 29 | 151 |
|  | Grade 8 |  |
| Central city | 33 | 145 |
| Urban fringe/large town | 40 | 155 |
| Rural/small town | 27 | 149 |
|  | Grade 12 |  |
| Central city | 32 | 150 |
| Urban fringe/large town | 39 | 152 |
| Rural/small town | 30 | 147 |

NOTE: Percentages may not add to 100 due to rounding. SOURCE: National Center for Education Statistics, National Assessment of Educational Progress (NAEP), 1998 Writing Assessment.

## Eligibility for the Free/Reduced-Price School Lunch Program

The Free/Reduced-Price School Lunch component of the National School Lunch Program, offered through the U.S. Department of Agriculture, is designed to ensure that children near or below the poverty line receive nourishing meals. ${ }^{7}$ The program is available to public schools, nonprofit private schools, and residential child-care institutions. Eligibility for free or reducedprice meals is determined through the USDA's Income Eligibility Guidelines, which require that family income be at 135 percent of the poverty level or less for a student to receive free lunches, and at 180 percent of the poverty level or less for a student to receive reduced-price lunches. As Table 2.6 shows, at least 34 percent of fourth-grade students, 27 percent of eighth-grade students, and 14 percent of twelfth-grade students were eligible for this program. ${ }^{8}$

Eligibility for the Free/Reduced-Price School Lunch Program is an indicator of poverty. Table 2.6 shows the relationship between that indicator and student performance in writing. The results show that family income has an association with writing achievement: students eligible for free or reduced-price lunches because of poverty had lower scores than those who were not eligible at all three grades (by 24 scale score points at grade 4,25 points at grade 8 , and 19 points at grade 12 ). At grades 4 and 8 , these differences in scale scores were greater than those between male and female students; at grade 12 they were the same as the difference in scores between male and female students.

[^12]
## Table 2.6

Average writing scale scores by Free/Reduced-Price School Lunch Program eligibility: 1998

|  | Percentage <br> of students | Average <br> scale score |  |
| ---: | :---: | :---: | :---: |
| Eligible | 34 |  | 134 |
| Not eligible | 54 |  | 158 |
| Information not available | 13 |  | 157 |
| Eligible | 27 |  | 132 |
| Not eligible | 55 |  | 157 |
| Information not available | 17 |  | 157 |
| Eligible | 14 |  | 152 |
| Not eligible | 66 |  | 155 |
| Information not available | 20 |  | 12 |

NOTE: Percentages may not add to 100 due to rounding. SOURCE: National Center for Education Statistics, National Assessment of Educational Progress (NAEP), 1998 Writing Assessment.

## Type of School

Average writing scale scores by type of school are presented in Table 2.7. Schools were classified as either public or nonpublic; nonpublic schools were then further divided into Catholic or other nonpublic schools.

At all three grades, students in both types of nonpublic schools had higher average scale scores than their peers in public schools. In addition, at grade 12, students in Catholic schools outperformed students in other nonpublic schools.

Previous NAEP writing assessments and other survey research on educational achievement have found significant differences in the performance of students attending public schools and those attending nonpublic schools. ${ }^{9}$ However, the reader is cautioned against using NAEP results to make simplistic inferences about the relative effectiveness of public and nonpublic schools. Average performance differences between the two types of schools may be related in part to socioeconomic and sociological factors. For example, some research points to instructional and policy differences between the two types of schools to explain the higher performance of private school students, ${ }^{10}$ while other studies have suggested that student selection and parental involvement are more significant contributors to performance differences. ${ }^{11}$

[^13]
## Table 2.7

Average writing scale scores by type of school: 1998

|  | Percentage <br> of students | Average <br> scale score |  |
| ---: | :---: | :---: | :---: |
| Public | $88^{*}$ | 148 |  |
| Nonpublic | $11^{*}$ | 164 |  |
| Nonpublic: Catholic | 7 | 163 |  |
| Other nonpublic | 4 |  | 165 |
| Public | 89 |  | 148 |
| Nonpublic | 11 |  | 167 |
| Nonpublic: Catholic | 7 |  | 169 |
| Other nonpublic | 5 |  | 166 |
| Public | 88 |  | 148 |
| Nonpublic | 12 |  | 165 |
| Nonpublic: Catholic | 8 | 167 |  |
| Other nonpublic | 3 |  | 159 |

* Percentages of public and nonpublic schools do not add to 100 because the Bureau of Indian Affairs schools were not counted in either category.
SOURCE: National Center for Education Statistics, National Assessment of Educational Progress (NAEP), 1998 Writing Assessment.

## Summary

For the NAEP 1998 writing assessment, the following patterns of scale score results across subgroups of students were observed. These differences may be related in part to sociological and socioeconomic factors.
$>$ Gender: Female students had higher average scale scores than male students at all three grades.
$>$ Race/ethnicity: At grade 4, Asian/Pacific Islander students had higher average scale scores than their White peers, who had higher average scale scores than their Black, Hispanic, and American Indian peers. At grades 8 and 12, Asian/Pacific Islander students and White students had higher average scale scores than Black, Hispanic, and American Indian students.

- Parental education: In general, higher levels of parental education were associated with higher levels of student performance at all three grade levels. For example, at all three grades, students who reported that at least one parent graduated from college had higher average scale scores than students who reported lower levels of parental education and students who did not know the level of their parents' education.
$>$ Region: Students in the Northeast and Central regions had higher average scale scores than those in the Southeast and West at grades 4 and 8. At grade 12, students in the Northeast, Central, and West regions outperformed their peers in the Southeast.
- Type of location: At grades 4 and 8, students from schools in urban fringe/ large town and rural/small town locations had higher average scale scores than their peers in central city schools. At grade 12 , there was no significant difference between the scores of students in central city schools and those of their peers in schools in the other locations. At grades 8 and 12 , students from schools in urban fringe/large town locations outperformed their peers from schools in rural/small town locations.
$>$ Free/Reduced-Price School Lunch eligibility: In 1998, for the first time, the NAEP writing assessment collected information on this federally funded program, an indicator of poverty. Results indicated that, at all three grades, students who were eligible for the Free/Reduced-Price School Lunch component of the National School Lunch Program had lower average scale scores than students who were not eligible.
- Type of school: At all three grade levels, students attending nonpublic schools had higher average scale scores than their counterparts attending public schools. At grade 12, students attending Catholic schools had higher average scale scores than their peers attending other nonpublic schools.

## CHAPTER 3

## Writing Achievement Level Results for Selected Subgroups

## Overview

The performance of our nation's students on the National Assessment of Educational Progress (NAEP) writing scale can be viewed in relation to expectations of what students should know and should be able to do. The percentages of students who attained the three achievement levels established by the National Assessment Governing Board (NAGB) provide an indication of whether student performance meets these expectations.

Three writing achievement levels - Basic, Proficient, and Advanced - are used to report the NAEP results. NAGB established these writing achievement levels in 1999 for the content framework that provided the basis for the 1998 assessment. The Basic level denotes partial mastery of the knowledge and skills that are fundamental for proficient work at a given grade. The Proficient level represents solid academic performance. Students reaching this level demonstrate competency over challenging subject matter. The Advanced level signifies superior performance at a given grade. For each grade, the levels are cumulative; that is, abilities achieved at the Proficient level presume mastery of abilities associated with the Basic level, and attainment of the Advanced level presumes mastery of both the Basic and the Proficient levels. The definitions of these levels of achievement for writing for each of the three grades in the NAEP writing assessment are presented in Figures 1.1 through 1.3 in Chapter 1.

The NAEP legislation requires that achievement levels be "used on a developmental basis until the Commissioner of Education Statistics determines . . . that such levels are reasonable, valid, and informative to the public." A discussion of the developmental status of achievement levels may be found in the Introduction to this report. Because the overall percentage of students who attained the Advanced level at each grade was so small, few differences in performance between subgroups were detected at this level.

## Gender

The percentages of male and female students attaining the Basic, Proficient, and Advanced levels are given in Table 3.1 and Figure 3.1. Table 3.1 shows the percentage of students at or above each of the achievement levels. In reading Table 3.1, it is necessary to keep in mind that the levels are cumulative. That is, included among students who are considered to be at or above Basic are those who achieved the Proficient and Advanced levels of performance, and included among students who are considered to be at or above Proficient are those who have attained the Advanced level of performance. Figure 3.1 also shows achievement level results, but in terms of the percentage of students within each achievement level range. All the tables and figures in this chapter follow that format.

At all three grades, higher percentages of female than male students were at or above the Basic and Proficient levels and at the Advanced level.

NOTE: Percentages may not add to 100, or to the exact percentages at or above achievement levels, due to rounding. SOURCE: National Center for Education Statistics, National Assessment of Educational Progress (NAEP), 1998 Writing Assessment.

## Race/Ethnicity

Achievement level results by racial/ethnic group are presented in Table 3.2 and Figure 3.2. The percentages of students performing at or above the three achievement levels are shown in Table 3.2. The percentages of students within each achievement level range are displayed in Figure 3.2. Differences among racial/ethnic groups were seen at grades 4,8 , and 12 .

At grade 4, there were higher percentages of Asian/Pacific Islander students at or above the Proficient level than of any other group. Also, White students outperformed their Black, Hispanic, and American Indian counterparts in terms of percentages at or above the Proficient achievement level at grade 4. At grades 8 and 12, there were higher percentages of White students and Asian/Pacific Islander students than Black, Hispanic, and American Indian students who were at or above the Proficient achievement level.

At grade 4, there were higher percentages of Asian/Pacific Islander students than White students at or above the Basic level. Also at grade 4, higher percentages of Asian/Pacific Islander students and White students than Black, Hispanic, and American Indian students were at or above the Basic level. There were higher percentages of White and Asian/Pacifier Islander students than Black, Hispanic, and American Indian students at or above the Basic achievement level at both grades 8 and 12 . As Figure 3.2 shows, for all groups at all three grades, approximately one-half or more of the students were within the Basic achievement level range.

Table 3.2
Percentage of students at or above achievement levels in writing by race/ethnicity: 1998

|  | Below Basic | At or above Basic | At or above Proficient | Advanced |
| :---: | :---: | :---: | :---: | :---: |
|  | Grade 4 |  |  |  |
| White | 10 | 90 | 29 | 2 |
| Black | 31 | 69 | 8 | 0 |
| Hispanic | 28 | 72 | 10 | 0 |
| Asian/Pacific Islander | 7 | 93 | 36 | 4 |
| American Indian | 24 | 76 | 11 | 1 |
|  | Grade 8 |  |  |  |
| White | 10 | 90 | 34 | 2 |
| Black | 28 | 72 | 8 | 0 |
| Hispanic | 31 | 69 | 11 | 0 |
| Asian/Pacific Islander | 10 | 90 | 35 | 2 |
| American Indian | 27 | 73 | 9 | 0 |
|  | Grade 12 |  |  |  |
| White | 16 | 84 | 26 | 1 |
| Black | 36 | 64 | 8 | 0 |
| Hispanic | 35 | 65 | 10 | 0 |
| Asian/Pacific Islander | 22 | 78 | 24 | 1 |
| American Indian | 42 | 58 | 9 | 0 |

## Parents' Highest Level of Education

Table 3.3 and Figure 3.3 present achievement level results based on students' reports of their parents' highest level of education. The percentages of students performing at or above the three achievement levels are shown in Table 3.3. The percentages of students within each achievement level range are displayed in Figure 3.3. As shown in Table 3.3, parental education and student achievement generally are positively associated.

Chapter 2 showed that student performance tended to be higher with higher levels of parental education, and the results for achievement levels show a similar pattern. At all three grades, higher percentages of students whose parents graduated from college were at the Advanced achievement level than students whose parents had some education after high school. Higher percentages of students whose parents graduated from college than students whose parents had lower levels of education were at or above the Proficient achievement level at all three grades, and at or above the Basic level at grades 8 and 12 .

At all three grades, higher percentages of students whose parents graduated from high school were at or above Proficient than those whose parents did not graduate from high school.

## Table 3.3

Percentage of students at or above achievement levels in writing by parents' highest level of education: 1998

|  | Below Basic | At or above Basic | At or above Proficient | Advanced |

NOTE: Percentages may not add to 100, or to the exact percentages at or above achievement levels, due to rounding. SOURCE: National Center for Education Statistics, National Assessment of Educational Progress (NAEP), 1998 Writing Assessment.

## Region of the Country

The percentages of students performing at or above the three achievement levels by region are shown in Table 3.4. The percentages of students within each achievement level range by region are displayed in Figure 3.4. (The composition of the regions is described in Appendix A.)

For grades 4 and 8 , higher percentages of students in the Northeast and Central regions were at or above the Proficient achievement level than their peers in the Southeast region and the West. At grade 12, fewer students in the Southeast region were at or above Proficient than their peers in the other three regions.

In terms of performance at or above the Basic level, the Northeast and Central regions had higher percentages of students than the Southeast and West at grades 4 and 8 . At grade 12, higher percentages of students in the Northeast, Central, and West regions were at or above the Basic level than students in the Southeast.

## Table 3.4

Percentage of students at or above achievement levels in writing by region: 1998

## Type of Location

Table 3.5 and Figure 3.5 present achievement level results for all three grades by type of location: central city, urban fringe/large town, and rural/small town. The percentages of students performing at or above the three achievement levels are shown in Table 3.5. Figure 3.5 displays the percentages of students within each achievement level range. (The type of location classifications are described in Appendix A.)

At grades 4 and 8 , higher percentages of students from schools in urban fringe/large town locations were at or above the Proficient level than those from schools in central city locations. At grades 8 and 12, higher percentages of students from schools in urban fringe/large town locations were at or above the Proficient level than those from schools in rural/small town locations. At grades 4 and 8 , there were higher percentages of students at or above Basic from schools in urban fringe/large town locations and in rural/small town locations than from schools in central cities. No differences among the locations in terms of percentages of students at or above the Basic level were seen at grade 12 .

## Table 3.5

## Eligibility for the Free/Reduced-Price School Lunch Program

Table 3.6 and Figure 3.6 present achievement level results for each grade by students' eligibility for the Free/Reduced-Price School Lunch component of the National School Lunch Program (NSLP), an indicator of poverty.

Across the three grades, higher performance was observed for students who were eligible for the program, except at the Advanced level at grade 12, where there were too few students to make the comparison. For example, as seen in both Table 3.6 and Figure 3.6, among fourth graders who were eligible for the program because of poverty, 28 percent were below the Basic level and 0 percent were at the Advanced level, compared to 10 percent and 2 percent, respectively, for those not eligible for the program.

NOTE: Percentages may not add to 100, or to the exact percentages at or above achievement levels, due to rounding. SOURCE: National Center for Education Statistics, National Assessment of Educational Progress (NAEP), 1998 Writing Assessment.

## Type of School

The percentages of public and nonpublic school students at all three grades who were at or above each of the achievement levels are shown in Table 3.7. Shown in Figure 3.7 are the percentages of students within each achievement level range by type of school.

At all three grades, there were higher percentages of students attending nonpublic schools at or above Basic, at or above Proficient, and at Advanced than there were public school students. There were no significant differences at any grade between students in Catholic schools and those in other nonpublic schools in terms of percentages at or above Basic and Proficient and at the Advanced achievement level.

## Table 3.7

## Summary

This chapter presented achievement level results for selected subgroups of fourth, eighth, and twelfth graders in the 1998 writing assessment. The major findings reported in this chapter are summarized below.

- Gender: At all three grade levels, higher percentages of female students than male students were at or above the Basic and Proficient achievement levels and at the Advanced level.
$>$ Race/ethnicity: At all three grades, higher percentages of White students and Asian/Pacific Islander students were at or above the Basic and Proficient achievement levels than Black students and Hispanic students. At grade 4, there were higher percentages of Asian/Pacific Islander students than White students at or above the Basic level and at or above Proficient.
- Parental education: Higher percentages of fourth, eighth, and twelfth graders who reported that at least one parent had graduated from college were at or above the Proficient achievement level than those who reported lower levels of parental education or who reported that they did not know their parents' educational level.
$>$ Region: In terms of percentages at or above the Proficient achievement level, fourth- and eighth-grade students in the Northeast and Central regions outperformed their peers in the Southeast and the West, and students in the three other regions outperformed those in the Southeast region at grade 12 .
$>$ Type of location: At grades 4 and 8 , but not at grade 12, higher percentages of students in urban fringe/large town locations were at or above the Basic and Proficient achievement levels than their peers in central cities. At grades 8 and 12, higher percentages of students from schools in urban fringe/large town locations were at or above the Proficient level than students from schools in rural/small town locations.
- Free/Reduced-Price School Lunch eligibility: Students who were not eligible for the Free/Reduced-Price School Lunch component of the National School Lunch Program had higher levels of achievement than students who, because of poverty, were eligible for that program.

Type of School: At all three grades, there were higher percentages of students attending nonpublic schools at or above the Basic and Proficient achievement levels and at the Advanced level than their peers attending public schools.

## CHAPTER 4

## Writing in School, Home Factors, and Writing Performance

## Overview

By learning to write well, students can become better thinkers, learners, and communicators. Given the power of writing as a tool for learning and communication, it is important to examine practices in school and conditions in the home in relation to student writing achievement. This chapter explores writing activities in school, home factors such as the presence of reading materials in the home, and their association with student writing performance.

Results from the National Assessment of Educational Progress (NAEP) 1998 writing assessment are presented in relation to students' reports about the writing instruction they received in school and about certain home factors. For each of these contextual variables, the percentages of students providing different responses to each question (for example, writing more than one draft of a paper always, sometimes, or never) and the corresponding average scale scores and achievement level results are presented. This chapter also addresses the frequency of students' planning on the NAEP writing assessment. Results reported in this chapter are for public and nonpublic school students.

## Writing In and For School

What sorts of writing activities do students perform in and for school? This section examines a series of student-reported variables: the frequency with which teachers talk with students about their writing, whether students save their writing work in folders or portfolios, and how frequently students write on computers, write drafts, plan their writing, and define the purpose and audience for their writing. This information is based on students' responses to background questions provided as part of the assessment. Some questions were posed only to eighth- and twelfth-grade students, so results for only those two grades are presented in some figures in this chapter.

Some of these variables, as well as additional variables, such as the emphasis teachers place on different aspects of writing in grading student writing, will be treated in greater depth in a forthcoming instructional and policy report. That report will also feature additional teacher- and school-reported information relevant to the teaching of writing and to schools' use of resources.

Frequency with Which Teachers Talk to Students About Student Writing. One means of engaging students with the challenge of communicating their ideas in writing is to discuss their writing with them. ${ }^{1}$ Students who participated in the 1998 NAEP writing assessment were asked how often their teachers talk to them about what they are writing. The results are presented in Figure 4.1.

As shown in the figure, the majority of students reported having teachers who spoke with them about their writing. At the fourth grade, 24 percent of students reported that their teachers always spoke with them about their writing, 65 percent reported that their teachers sometimes spoke with them, and 11 percent reported that their teachers never spoke with them about their writing. At both grades 8 and 12 , about half of the students reported that their teachers always spoke with them about what they were writing, and more than 40 percent reported that their teachers sometimes spoke with them about what they were writing.

Student writing performance generally was positively associated with teachers talking with their students about their writing. At all three grades, students whose teachers always or sometimes talked to them about their writing had higher scale scores than their peers whose teachers never talked to them about their writing. Additionally, at grades 8 and 12, students whose teachers always talked to them about their writing had higher scale scores than those whose teachers sometimes talked to them about their writing.

[^14]
## Figure 4.1

Students' reports on the frequency with which their teachers talk to them about what they are writing: 1998

NOTE: Percentages may not add to 100 due to rounding
SOURCE: National Center for Education Statistics, National Assessment of Educational Progress (NAEP), 1998 Writing Assessment.

Saving Students' Writing Work in Folders or Portfolios. Numerous studies have suggested that saving student writing in portfolios can be a useful means of helping students track their own writing progress over time. ${ }^{2}$ Students who took the NAEP 1998 writing assessment were asked whether they or their teachers saved student writing in folders or portfolios. As shown in Figure 4.2, the majority of students at each grade either saved their own written work or had it saved by their teachers in folders or portfolios: 81 percent at fourth grade, 79 percent at eighth grade, and 75 percent at twelfth grade.

Figure 4.2 also indicates a positive relationship between saving work in folders or portfolios and student performance. At all three grades, students who saved, or whose teachers saved, their writing work in folders or portfolios had higher average scale scores than students whose work was not saved.

[^15]Students' reports on whether they or their teachers save their writing work in a folder or portfolio: 1998

NOTE: Percentages may not add to 100 due to rounding
SOURCE: National Center for Education Statistics, National Assessment of Educational Progress (NAEP), 1998 Writing Assessment.

Frequency of Computer Use for Writing. There is currently much debate about the value of students using computers to write. While some educators believe computer use can encourage students to revise their writing, others argue that the effectiveness of computer use in writing depends on the age of the students, the training of their teachers, and the particular ways in which computers are used. ${ }^{3}$ Information from students' reports about the frequency of computer use for writing drafts or final versions of stories or reports is presented in Figure 4.3.

How often do students use computers for writing drafts or final versions of stories or reports? According to the figure, at all three grades, more than onethird of students use computers for this purpose at least once a week. Nearly three-fourths of students use computers for this purpose at least once or twice a month -71 percent at fourth grade, 74 percent at eighth grade, and 77 percent at twelfth grade.

Figure 4.3 also indicates that fourth graders who reported using computers to write drafts or final versions of stories or reports once or twice a month outperformed those students who never or hardly ever used computers for this purpose and those students who used computers for this purpose at least once a week. At grade 4, also, students who never or hardly ever used computers for writing drafts or final versions of stories or reports outperformed students who used computers for this purpose at least once a week. At grade 8 , students who used computers to write drafts or final versions of stories or reports once or twice a month outperformed students who used computers for this purpose at least once a week. Finally, at grades 8 and 12, students who used computers for writing drafts or final versions of stories or reports at least once a week or once or twice a month had higher scores than their peers who reported never or hardly ever using computers for this purpose.

## Writing as Process

Research indicates that writing is a recursive process; the mature writer rethinks ideas and ways of expressing those ideas throughout the process of creating a final written piece. ${ }^{4}$ Based on this model of writing, many classroom teachers employ a variety of strategies to encourage students to take time to think about their ideas, to plan ways they might express those ideas in writing, and to revise their writing to refine and better express their ideas. The variables examined below provide a context for looking at student writing performance in light of some of these strategies.

Frequency of Writing Drafts. Giving students the opportunity to revisit their written work by asking them to produce more than one draft of a paper can be an effective means of teaching writing as a recursive process. Figure 4.4 presents information about how often students at grades 4,8 , and 12 who took the NAEP 1998 writing assessment were asked to produce more than one draft of a paper.

As shown in the figure, the majority of students reported that their teachers asked them to write more than one draft of a paper at least sometimes. Eightyone percent of fourth graders, 90 percent of eighth graders, and 89 percent of twelfth graders were asked to write more than one draft of a paper at least sometimes.

Writing more than one draft of a paper was positively associated with student writing achievement at grades 8 and 12 . Students at both grades who were always asked to write more than one draft of a paper had higher average scale scores than did their peers who were sometimes or never asked to do so. There was no relationship between student reports of writing more than one draft and student performance at grade 4.

[^17]Students' reports on the frequency with which their teachers ask them to write more than one draft of a paper: 1998

NOTE: Percentages may not add to 100 due to rounding.
SOURCE: National Center for Education Statistics, National Assessment of Educational Progress (NAEP), 1998 Writing Assessment.

Frequency of Planning Writing and of Defining Purpose and Audience. Current notions of writing as process suggest that if students are given the opportunity to think through what it is they want to express and how to express it in their writing, they may become more engaged with the task of writing and better able to express their ideas clearly. Planning includes consideration of the demands of the form to use for writing (essay, letter, or story, for example) and the specific topic or theme the writer wishes to address. At its best, such planning ought to include attention to the purpose and audience for writing; if students are taught that different purposes and audiences for writing require variation in tone and content, they will be in a better position to use writing as a means of exploration and communication. ${ }^{5}$

To reflect good writing practice, students at each grade who took the NAEP 1998 writing assessment received with their test booklets a brochure that provided suggestions for planning and revision. (The brochures for grades 4,8 , and 12 are reprinted in Chapter 6 .) They were also given space in their test booklets for planning their writing. During scoring of the NAEP 1998 writing assessment, trained raters noted whether students used the available space for planning for none, one, or two of the 25 -minute writing prompts included in their test booklets. Students used a variety of strategies, which raters recorded, including rough drafts, outlines, lists, diagrams (including webs and other graphic organizers), pictures, and multiple forms (which incorporated two or more of the listed categories). The percentages of students who engaged in planning activities on none, one, or two of the prompts on the assessment and the corresponding scale scores are featured in Figure 4.5.

As shown in the figure, at the fourth grade, 47 percent of students planned for at least one of the two prompts in their test booklets. Approximately twothirds of eighth and twelfth graders did planning for at least one of the two prompts in their test booklets. At all three grades, students who engaged in planning in the available space for both writing prompts had higher average scale scores than students who planned for only one or none. In addition, students who planned for one writing prompt on the assessment had higher average scale scores than those who planned for none.

[^18]
## Figure 4.5

Number of occurrences of planning in test booklets* on students' responses to two 25 -minute writing prompts: 1998

SOURCE: National Center for Education Statistics, National Assessment of Educational Progress (NAEP), 1998 Writing Assessment.

What about planning for writing in the classroom? Students at grades 8 and 12 who took the writing assessment were asked how frequently their English teachers ask them to plan their writing. A summary of their responses is presented in Figure 4.6. The majority of students at both grades 8 and 12 were asked to plan their writing at least once a week. At the eighth grade, 59 percent of students were asked by their English teachers to plan their writing at least once a week, and 26 percent were asked to do so once or twice a month. At the twelfth grade, 54 percent of students were asked to plan their writing at least once a week, and 30 percent were asked to do so once or twice a month.

At both grades, students whose teachers asked them to plan writing at least once a week or once or twice a month had higher average scale scores than students whose teachers never or hardly ever asked them to plan their writing. In addition, at both grades 8 and 12, students whose teachers asked them to plan their writing once or twice a month outperformed those whose teachers asked them to plan their writing at least once a week.

## Figure 4.6

Students' reports on the frequency with which their English teachers ask them to plan their writing: 1998

NOTE: Percentages may not add to 100 due to rounding.
SOURCE: National Center for Education Statistics, National Assessment of Educational Progress (NAEP), 1998 Writing Assessment.

Did students accustomed to planning for classroom assignments also do planning on the assessment? The answer is "yes," as shown in Figure 4.7, for students at both grades 8 and 12. At grade 8, for example, 49 percent of students who planned their writing at least once a week or once or twice a month showed visible planning for both prompts on the assessment, while only 34 percent of students who never or hardly ever planned their writing did so on both prompts in the assessment.

Frequency of student planning on $25-$ minute prompts in the assessment* by frequency with which their English teachers ask them to plan their writing, grades 8 and 12: 1998

| Scale score | Percentage at or above Proficient |
| :---: | :---: |
| 140 | 14 |
| 151 | 22 |
| 158 | 27 |
| Scale score | Percentage at or above Proficient |
| 142 | 14 |
| 155 | 25 |
| 163 | 31 |
| Scale <br> score | Percentage at or above Proficient |
| 133 | 11 |
| 147 | 19 |
| 156 | 28 |

[^19]As shown in Figure 4.8, students at grades 8 and 12 reported being asked to define the purpose and audience of their writing somewhat less frequently than they were asked to plan their writing. Research indicates that it may be difficult for students to envision an audience other than the teacher in a classroom setting. ${ }^{6}$ At both eighth and twelfth grades, 42 percent of students were asked to define their purpose and audience for writing at least once a week. Twenty-eight percent of eighth graders and 30 percent of twelfth graders were asked to do so once or twice a month.

At grade 8, students whose English teachers asked them to define purpose and audience once or twice a month outperformed their peers whose teachers never or hardly ever asked them to do so and those whose teachers asked them to do so at least once a week. There was no relationship between frequency of being asked to define purpose and audience and student performance at grade 12 .

## Figure 4.8

Students' reports on the frequency with which their English teachers ask them to define their purpose and audience: 1998

NOTE: Percentages may not add to 100 due to rounding.
SOURCE: National Center for Education Statistics, National Assessment of Educational Progress (NAEP), 1998 Writing Assessment.

[^20]
## Home Factors

Previous NAEP assessments in a variety of subjects and recent research have consistently shown that certain home factors are related to student achievement. ${ }^{7}$ This section explores two of those variables: number and types of reading materials in the home and frequency with which students discuss their studies with someone at home.

Types of Reading Materials in the Home. Because a relationship has been established between students' reading and writing abilities, ${ }^{8}$ the number and types of reading materials found in the home are of particular relevance to students' writing achievement.

Students at all three grades were asked a series of questions about reading materials in the home: Does the family get a newspaper regularly? Is there an encyclopedia at home? About how many books are in the home? Does the family get any magazines regularly? Figure 4.9 presents the percentages of students reporting that their families have all four types of reading materials, three types, or two or fewer types of these materials. Students were counted as having books in the home if they reported more than 25 books in the home.

As indicated in the figure, 38 percent of fourth graders, 51 percent of eighth graders, and 53 percent of twelfth graders reported having all four types of reading materials in the home. At all three grades, the more types of reading materials reported in the home, the higher the average writing scores.

[^21]
## Figure 4.9

Students' reports on the presence of four types of reading materials in their home (a newspaper, an encyclopedia, magazines, and more than 25 books): 1998

NOTE: Percentages may not add to 100 due to rounding.
SOURCE: National Center for Education Statistics, National Assessment of Educational Progress (NAEP), 1998 Writing Assessment.

Frequency of Discussing Studies at Home. Research studies have demonstrated the positive relationship between students' discussing their schoolwork with someone at home and achievement. ${ }^{9}$ Figure 4.10 shows that most students do discuss their studies at home: 76 percent of fourth graders, 69 percent of eighth graders, and 67 percent of twelfth graders reported discussing their studies with someone at home at least once a week. At all three grades, the more frequently students discussed their studies with someone at home, the better their writing scores.

[^22]
## Summary

The relationship between student responses to NAEP background questions about writing and other literacy-related activities and average scores observed in this chapter cannot be interpreted in a causal sense. Many factors beyond those covered in this chapter may exert an influence on students' writing performance. Furthermore, since the students who participate in the NAEP writing assessment are at different stages of their writing development, it is unlikely that all the contextual factors considered here would exhibit an identical relation to student performance at each of the three grades assessed. As shown by the results of the NAEP 1998 writing assessment, certain instructional practices prove more directly related to writing scores at one grade than at another. The following frequencies of activities and patterns of student writing performance were observed.
$>$ At all three grades assessed, a majority of students reported that their teachers spoke with them about what they were writing at least sometimes. A positive relationship was evident between teachers talking with students about what students were writing and students' writing scores. This was more evident at grades 8 and 12 than at grade 4 ; at grades 8 and 12 , students whose teachers always spoke with them about their writing outperformed their peers whose teachers sometimes spoke with them about their writing.
$>$ At all three grades, most students reported saving their writing work or having their writing work saved by their teachers in a folder or portfolio. There was a positive relationship at all three grades between student writing scores and students saving or having their work saved in folders or portfolios.

- Over one-third of students at all three grades reported using computers for writing drafts or final versions of stories or reports at least once or twice a week. Although the relationship between writing on computers and writing scale scores was mixed, at grades 8 and 12 students who reported doing so once or twice a month had higher average scores than students who reported never or hardly ever doing so.
- A majority of students at all three grades reported at least sometimes being asked to write more than one draft of a paper. While there were no relationships with student scores at grade 4 , students at grades 8 and 12 who reported being asked to write more than one draft at least sometimes had higher average scale scores than their peers who were not asked to do so.
- Most students at grades 8 and 12 reported being asked to plan their writing at least once or twice a week. Those students who were asked to plan their writing at least once a week or once or twice a month outperformed their peers who were never or hardly ever asked to do so.
- At all three grades, students who did planning for the prompts on the assessment outperformed those who did not, and those who planned for both prompts they received outperformed those who did so for only one prompt.

Over two-thirds of students at grades 8 and 12 reported being asked to define a purpose and audience for their writing at least once a week or once or twice a month. At grade 8, students who defined purpose and audience once or twice a month outperformed those who never or hardly ever did so and those who did so at least once a week. There was no relationship between frequency of being asked to define purpose and audience and student performance at grade 12 .

- Consistent with the results of past NAEP assessments in a range of subject areas, the more types of reading materials reported to be in the home, the higher the average writing scores at grades 4,8 , and 12 . Thirty-eight percent of fourth graders, 51 percent of eighth graders, and 53 percent of twelfth graders reported having all four types of reading materials (a newspaper, an encyclopedia, magazines, and more than 25 books) in the home.

Also consistent with past NAEP assessments, the more frequently students discussed their studies with someone at home, the better their writing scores. More than two-thirds of students at each grade reported doing so at least once a week.

## CHAPTER 5

## Average Scale Score and Achievement Level Results for the States

## Overview

In addition to the national component of the National Assessment of Educational Progress (NAEP) 1998 assessment in writing, state-by-state assessments were administered at grade 8 in participating states and jurisdictions. ${ }^{1}$ This chapter presents average scale scores and achievement level results for public school students in grade 8 . The NAEP legislation requires that achievement levels be "used on a developmental basis until the Commissioner of Education Statistics determines . . . that such levels are reasonable, valid, and informative to the public." A discussion of the developmental status of achievement levels may be found in the Introduction.

In addition to presenting overall performance results for students within states, this chapter presents results for selected subgroups of students and also provides cross-state comparisons of average scale scores and the percentages of students within each of the achievement level ranges: below Basic, Basic, Proficient, and Advanced. Only the highlights of major findings are discussed in this chapter. Information that provides context for these results is presented in two appendices. Appendix C provides state-by-state information on the percentages of students in each subgroup who participated in the NAEP 1998 writing assessment. Appendix D presents additional contextual state information from non-NAEP sources, including student-teacher ratios and expenditures on education. More performance results for public school students are shown in Appendix E, which provides additional achievement level results for subgroups by state.

For jurisdictions where there were a sufficient number of nonpublic schools that met participation guidelines, results are available for nonpublic school students. These results can be found in the individual reports published separately for each participating jurisdiction and in Appendix F of this report. ${ }^{2}$ State sampling procedures and participation rates for both public and nonpublic schools can be found in Appendix A.

[^23]
## Scale Score Results

Table 5.1 shows average scale scores for grade 8 public school students in jurisdictions that participated in the 1998 NAEP writing assessment. Overall, 40 jurisdictions participated in the eighth-grade state-by-state writing assessment. Although Illinois participated, it did not meet minimum school participation guidelines for public schools, so Illinois public school results are not included in this report. Five other jurisdictions, while meeting the minimum school participation guidelines, did not meet more stringent participation rate standards; results for these jurisdictions are included in this report but are noted in the relevant tables and appendices. (Standards for sample participation are described in Appendix A.) Thus, results for eighth-grade public school students are presented for 39 jurisdictions. It should be noted that the average scale scores for the nation, indicated in the tables throughout this chapter, are based on the national sample (not on aggregated state samples) and represent the performance of public school students only. As shown in Table 5.1, average scores for eighth-grade public school students who participated in the state-bystate assessment ranged from 124 to 165 .

Differences in writing performance among states and jurisdictions most likely reflect an interaction between the effectiveness of the educational programs within the state or jurisdiction and the challenges posed by economic constraints and student demographic characteristics.

## Table 5.1

Average grade 8 scale scores for the states for public schools only: 1998

1998 Writing Assessment.

Figure 5.1 lists the 39 states or jurisdictions that participated in the state writing assessment at grade 8 and met minimum school participation guidelines for public schools. The figure shows the states and jurisdictions divided into three groups: those whose average scores were above the national average, at or around the national average, and below the national average. Note that the national average is for public schools only and is based on the national sample, not on aggregated state samples. Within each group, the states and jurisdictions are presented in alphabetical order.

Summary of jurisdiction performance relative to the nation for grade 8 public schools by scale scores: 1998

| Higher thon the national average | At or around the national average | Lower than the national average |
| :---: | :---: | :---: |
| Colorado* <br> Connecticut <br> DDESS <br> DoDDS <br> Maine <br> Massachusetts <br> Oklahoma <br> Texas <br> Virginia <br> Wisconsin ${ }^{\dagger}$ | Georgia <br> Kentucky <br> Maryland <br> Minnesota ${ }^{\dagger}$ <br> Montana ${ }^{\dagger}$ <br> New York ${ }^{\dagger}$ <br> North Carolina <br> Oregon <br> Rhode Island <br> Tennessee <br> Washington <br> Wyoming | Alabama <br> Arizona <br> Arkansas <br> California ${ }^{\dagger}$ <br> Delaware** <br> District of Columbia <br> Florida <br> Hawaii <br> Lovisiana <br> Mississippi <br> Missouri <br> Nevada <br> New Mexico <br> South Carolina <br> Utah <br> Virgin Islands <br> West Virginia |

$\dagger$ Indicates jurisdiction did not meet one or more of the guidelines for school participation.

* If using a multiple comparison procedure based on 39 jurisdictions, this jurisdiction performed not higher than the national average, but at or around the national average.
**If using a multiple comparison procedure based on 39 jurisdictions, this jurisdiction performed not lower than the national average, but at or around the national average.
DDESS: Department of Defense Domestic Dependent Elementary and Secondary Schools
DoDDS: Department of Defense Dependents Schools (Overseas)
NOTE: Comparisons of participating jurisdictions to the nation are based on the comparison of each state separately to the nation as a whole. National results are based on the national assessment sample, not on aggregated state assessment samples. Differences between states and jurisdictions may be partially explained by other factors not included in this table.
SOURCE: National Center for Education Statistics, National Assessment of Educational Progress (NAEP), 1998 Writing Assessment.

## Achievement Level Results

Achievement level results for jurisdictions are presented in two ways: in terms of students at or above each achievement level and in terms of students within each achievement level range. Table 5.2 shows the percentages of eighth-grade students at or above the Basic, Proficient, and Advanced achievement levels as well as the percentage of students below the Basic level. Note that the levels are cumulative. Included among students who are considered to be at or above Basic are those who may have also achieved the Proficient and Advanced levels of performance, and included among students who are considered to be at or above Proficient are those who may have attained the Advanced level of performance. For example, Table 5.2 shows that, for public schools in the nation, 83 percent of eighth-grade students performed at or above the Basic level, 24 percent at or above the Proficient level, and 1 percent at the Advanced level. Seventeen percent of eighth-grade students performed below the Basic level.

## Table 5.2

Percentage of grade 8 students at or above achievement levels for public schools only: 1998

|  | Below Basic | At or above Basic | At or above Proficient | Advanced |

NOTE: National results are based on the national assessment sample, not on aggregated state assessment samples. Differences between states and jurisdictions may be partially explained by other factors not included in this table.
SOURCE: National Center for Education Statistics, National Assessment of Educational Progress (NAEP), 1998 Writing Assessment.

Figure 5.2 lists the 39 states or jurisdictions that participated in the state writing assessment at grade 8 and met minimum school participation guidelines for public schools. In this figure, states and jurisdictions are divided into three groups according to their percentage of students at or above the Proficient achievement level: those whose percentages were higher than the national percentage, at or around the national percentage, and lower than the national percentage. Note that the national percentage is for public schools only and is based on the national sample, not on aggregated state samples. Within each group, the states and jurisdictions are presented in alphabetical order.

Figure 5.2
Summary of jurisdiction performance relative to the nation for grade 8 public schools by percentage of students at or above the Proficient achievement level: 1998

| Higher than the the national percentage | At or around the national percentage | Lower than the national percentage |
| :---: | :---: | :---: |
| Connecticut <br> DDESS <br> DoDDS <br> Maine <br> Massachusetts <br> Texas <br> Wisconsin ${ }^{\dagger *}$ | Arizona <br> Colorado <br> Delaware <br> Georgia <br> Kentucky <br> Maryland <br> Minnesota ${ }^{\dagger}$ <br> Montana ${ }^{\dagger}$ <br> North Carolina <br> Oklahoma <br> Oregon <br> Rhode Island <br> Tennessee <br> Virginia <br> Washington <br> Wyoming | Alabama <br> Arkansas <br> California ${ }^{\dagger}$ <br> District of Columbia <br> Florida <br> Hawaii <br> Lovisiana <br> Mississippi <br> Missouri <br> Nevada <br> New Mexico <br> New York ${ }^{+*}$ <br> South Carolina <br> Utah** <br> Virgin Islands <br> West Virginia |

$\dagger$ Indicates jurisdiction did not meet one or more of the guidelines for school participation.

* If using a multiple comparison procedure based on 39 jurisdictions, this jurisdiction's percentage of students at or above Proficient was not higher than, but at or around the national percentage.
**If using a multiple comparison procedure based on 39 jurisdictions, this jurisdiction's percentage of students at or above Proficient was not lower than, but at or around the national percentage.
DDESS: Department of Defense Domestic Dependent Elementary and Secondary Schools
DoDDS: Department of Defense Dependents Schools (Overseas)
NOTE: Comparisons of participating jurisdictions to the nation are based on the comparison of each state separately to the nation as a whole. National results are based on the national assessment sample, not on aggregated state assessment samples. Differences between states and jurisdictions may be partially explained by other factors not included in this table. Placement of a state in a category was determined by size of standard errors as well as percentage at or above Proficient.
SOURCE: National Center for Education Statistics, National Assessment of Educational Progress (NAEP), 1998 Writing Assessment.

Figure 5.3 presents the percentages of public school students within each of the achievement level ranges - below Basic, Basic, Proficient, and Advanced in each state or jurisdiction in the 1998 state-by-state writing assessment. The shaded bars in this figure represent achievement level results. Inside the shaded bars, the numbers indicate the percentages of students who attained the specified levels of performance. The sections to the left of the center vertical line represent the proportion of students who were at Basic or below Basic. The sections of the bars to the right of the vertical line represent the proportion of students who reached the Proficient and Advanced levels of performance. As an example of how to read this figure, the top bar shows that, for eighth-grade public school students in the nation as a whole, 59 percent were at the Basic achievement level, 23 percent at the Proficient achievement level, and 1 percent at the Advanced achievement level. Seventeen percent performed below the Basic achievement level.

The percentages of students at the Advanced level ranged from 0 percent to 6 percent. At the Proficient level, the percentages ranged from 8 percent to 40 percent. The percentages of students at the Basic achievement level ranged from 47 percent to 66 percent. Finally, the percentages of students below the Basic level ranged from 9 to 39 percent.

Percentage of grade 8 students within each achievement level range for public schools only: 1998

## Cross-State Comparisons of Writing Performance

Figures 5.4 and 5.5 indicate whether differences between pairs of participating jurisdictions are statistically significant. ${ }^{3}$ Figure 5.4 shows comparisons across states of average scale scores for eighth-grade students. Corresponding comparisons of achievement level results are shown in Figure 5.5.

Figure 5.4 presents comparisons of average scale scores for participating states and other jurisdictions at grade 8 . For example, Connecticut is the top row. The second row is the Department of Defense domestic schools (DDESS). The solid dot at the beginning of the second row indicates that DDESS did not differ significantly from Connecticut; these were the two jurisdictions with the highest average scores. The jurisdictions in the next group of rows the Department of Defense overseas schools (DoDDS), Maine, Massachusetts, and Texas - all had average scale scores lower than Connecticut's, but not significantly different from the average scale score for the Department of Defense domestic schools.

[^24]
# Comparisons of average writing scale scores for grade 8 public schools only: 1998 

Instructions: Read across the row for a jurisdiction to compare performance with the jurisdictions listed in the heading of the chart. The symbols indicate whether the average writing scale score of the jurisdiction in each row is higher than, the same as, or lower than the average writing scale score of the jurisdiction listed in the heading. As an example, look at the row beginning with Connecticut. Connecticut's score was about the same as that of the Department of Defense domestic schools, and higher than that of all other jurisdictions listed across the row.

Jurisdiction has statistically significantly higher average scale score than the jurisdiction listed at the top of the chart.

No statistically significant difference from the jurisdiction listed at the top of the chart.

Jurisdiction has statistically significantly lower average scale score than the jurisdiction listed at the top of the chart.
$\dagger$ Indicates that the jurisdiction did not satisfy one or more of the guidelines for school participation rates.

DDESS: Department of Defense Domestic Dependent Elementary and Secondary Schools
DoDDS: Department of Defense Dependents Schools (Overseas)
NOTE: The between-jurisdiction comparisons take into account sampling and measurement error and that each jurisdiction is being compared with every other jurisdiction. Significance is determined by the application of a multiple comparison procedure (see Appendix A). Differences between states and jurisdictions may be partially explained by other factors not included in this table. SOURCE: National Center for Education Statistics, National Assessment of Educational Progress (NAEP), 1998 Writing Assessment.

Figure 5.5 presents comparisons of percentages of eighth-grade students at or above the Proficient level in writing for all participating jurisdictions. The two top-performing jurisdictions (the top two rows) were Connecticut and the Department of Defense domestic schools, which did not differ significantly from each other. The jurisdictions in the next group of rows - Maine, the Department of Defense overseas schools, and Massachusetts - had lower percentages of students at or above Proficient than Connecticut, but did not differ significantly from the Department of Defense domestic schools.

## Figure 5.5 <br> Comparisons of percentages of students at or above Proficient for grade 8 public schools only: 1998

Instructions: Read across the row for a jurisdiction to compare performance with the jurisdictions listed in the heading of the chart. The symbols indicate whether the percentage at or above Proficient in the jurisdiction in each row is higher than, the same as, or lower than the percentage in the jurisdiction listed in the heading. As an example, look at the row beginning with Connecticut. Connecticut's percentage was about the same as that of the Department of Defense domestic schools, and higher than that of all other jurisdictions listed across the row.

Jurisdiction has statistically significantly higher percentage than the jurisdiction listed at the top of the chart.
No statistically significant difference from the jurisdiction listed at the top of the chart.

Jurisdiction has statistically significantly lower percentage than the jurisdiction listed at the top of the chart.
$\dagger$ Indicates that the jurisdiction did not satisfy one or more of the guidelines for school participation rates.

DDESS: Department of Defense Domestic Dependent Elementary and Secondary Schools
DoDDS: Department of Defense Dependents Schools (Overseas)
NOTE: The between-jurisdiction comparisons take into account sampling and measurement error and that each jurisdiction is being compared with every other jurisdiction. Significance is determined by the application of a multiple comparison procedure (see Appendix A). Differences between states and jurisdictions may be partially explained by other factors not included in this table. SOURCE: National Center for Education Statistics, National Assessment of Educational Progress (NAEP), 1998 Writing Assessment.

## Average Scale Score and Achievement Level Results for Selected Subgroups

The following tables present average scale score and achievement level results for the states by gender, race/ethnicity, parents' highest level of education, type of location, and eligibility for the Free/Reduced-Price School Lunch Program. For each subgroup, the percentages of students that participated in the NAEP 1998 writing assessment by jurisdiction are presented in Appendix C.

Average scale scores and the percentages of students reaching the Proficient level or higher by gender are given in Table 5.3. For grade 8 students in all participating jurisdictions, the average scale scores of female students were higher than those of male students. The percentage of eighth-grade female students at or above the Proficient level of writing achievement was also higher than the percentage of males at or above that achievement level in all of the participating jurisdictions.

NOTE: National results are based on the national assessment sample, not on aggregated state assessment samples. Differences between states and jurisdictions may be partially explained by other factors not included in this table.
SOURCE: National Center for Education Statistics, National Assessment of Educational Progress (NAEP), 1998 Writing Assessment.

Average scale scores and the percentages of students at or above the Proficient level by racial/ethnic group are shown in Table 5.4. The following discussion pertains to scale scores where sample sizes allow comparisons. Across all participating jurisdictions, White eighth graders had higher average scale scores than their Hispanic peers. White eighth graders had higher average scale scores than their Black peers in all jurisdictions except West Virginia, where the difference was not statistically significant. Also, White students had higher average scale scores than their American Indian peers in all jurisdictions except Nevada and North Carolina, where the differences were not significant.

There were no statistically significant differences between the performance of White and Asian/Pacific Islander students in any jurisdiction except in Minnesota, where White students had higher average scale scores than their Asian/Pacific Islander peers.

## Table 5.4

Average grade 8 scale scores and percentage of students at or above the Proficient level by race/ethnicity for public schools only: 1998

*** Sample size is insufficient to permit a reliable estimate.

DoDDS: Department of Defense Dependents Schools (Overseas)
NOTE: National results are based on the national assessment sample, not on aggregated state assessment samples. Differences between states and jurisdictions may be partially explained by other factors not included in this table.
SOURCE: National Center for Education Statistics, National Assessment of Educational Progress (NAEP), 1998 Writing Assessment.

Table 5.5 shows average scale scores and the percentages of students at or above the Proficient achievement level by parents' highest level of education. The following discussion covers all participating jurisdictions where sample size allows comparison. Students who had at least one parent who graduated from college had higher average scale scores than students whose parents did not graduate from high school, except in one case. The exception was the District of Columbia, where the difference was not statistically significant.

In most participating jurisdictions where sample size allows comparisons, students whose parent or parents graduated from college had higher average scale scores than students whose parent or parents graduated from high school. The exceptions were Alabama, Louisiana, the District of Columbia, the Department of Defense overseas schools, and the Virgin Islands.

Finally, in most jurisdictions, students whose parents graduated from high school had higher average scale scores than students whose parents did not. The exceptions were Arkansas, Delaware, Hawaii, Louisiana, Mississippi, New Mexico, South Carolina, Tennessee, Virginia, Wyoming, and the District of Columbia.

SOURCE: National Center for Education Statistics, National Assessment of Educational Progress (NAEP), 1998 Writing Assessment.

Table 5.6 shows state writing assessment results by type of location. The three categories of location - central city, urban fringe/large town, and rural/ small town - are based on Census Bureau definitions of metropolitan statistical areas, population size, and density. These classifications are based solely on geographic characteristics and are described in Appendix A.

The following discussion pertains to jurisdictions where sample sizes permitted comparisons. In eight states - Connecticut, Georgia, Maryland, Massachusetts, Minnesota, New York, Rhode Island, and Virginia - students from schools in urban fringe/large town locations had higher average scale scores than those from schools located in central cities. In addition, in six of those eight states (excepting Georgia and Virginia), students from schools in rural/small town locations had higher average scale scores than their counterparts from schools in central city locations. Students from urban fringe/large town schools had higher average scale scores than their counterparts in rural/small town schools in Arizona, Georgia, South Carolina, and Virginia. Students from schools in central cities had higher average scale scores than their counterparts from schools in rural/small town locations in New Mexico, South Carolina, and West Virginia.

Table 5.7 shows state writing assessment results by eligibility for the Free/ Reduced-Price School Lunch Program. For all jurisdictions where sample sizes permitted comparison, except in two cases, students who were not eligible for the Free/Reduced-Price School Lunch Program had higher average scale scores than those who were eligible. The exceptions were the Department of Defense overseas schools and Department of Defense domestic schools.

## Summary

This chapter presented the scale score and achievement level results for eighthgrade public school students in the jurisdictions that participated in, and met participation guidelines for, the NAEP 1998 writing state-by-state assessment. In addition to presenting the average scale scores and the percentage of students at or above the Proficient level for each participating jurisdiction, comparisons across jurisdictions were presented for these results. The chapter concluded with a consideration of the performance of five selected subgroups of students: by gender, race/ethnicity, parents' highest level of education, type of location, and eligibility for the Free/Reduced-Price School Lunch Program.

Results are presented for 39 jurisdictions. Those results include the following:

- The jurisdictions with the highest average scale scores, as well as the highest percentages of students at or above the Proficient level, were Connecticut and the Department of Defense Domestic Schools. The next-highest scores were observed in a cluster of jurisdictions that included the Department of Defense overseas schools, Maine, Massachusetts, and Texas. These jurisdictions, with the exception of Texas, also comprised the cluster of states with the next-highest percentage of students at or above the Proficient achievement level. Readers are reminded that differences among states and jurisdictions may be explained by a wide variety of factors, including socioeconomic variables.
- Females had higher average scale scores than males in every jurisdiction. There were also higher percentages of females than males at or above Proficient in every jurisdiction.
- There were no statistically significant differences between the performance of White students and Asian/Pacific Islander students in jurisdictions where sample sizes permitted comparison, except in Minnesota, where White students had higher average scale scores than their Asian/Pacific Islander peers. White students had higher average scale scores than Hispanic students in every jurisdiction where sample size permitted comparison. White students had higher average scale scores than Black students in every jurisdiction where sample size permitted comparison, except West Virginia, where the difference was not statistically significant.
- Students who reported that at least one parent graduated from college had higher average scale scores than students who reported that their parents did not graduate from high school in every participating jurisdiction where sample size permitted comparison except the District of Columbia, where that difference was not significant. Students with at least one parent who graduated from high school had higher average scale scores than students whose parents did not graduate from high school in 19 participating jurisdictions where sample sizes permitted comparison.
- In eight participating jurisdictions, students from schools in urban fringe/ large town locations had higher average scale scores than their counterparts from schools in central cities; in six of those eight jurisdictions, students from schools in rural/small town locations also had higher average scale scores than their counterparts from schools in central cities. Students from schools in central cities had higher average scale scores than their peers from schools in rural/small town locations in New Mexico, South Carolina, and West Virginia.
- In every jurisdiction where sample size permitted comparison, except the Department of Defense domestic schools and the Department of Defense overseas schools, students who were not eligible for the Free/Reduced-Price School Lunch Program had higher average scale scores than those who were eligible for that program.

# Additional Sample Student Responses from the 1998 NAEP Writing Assessment 

## Overview

The nine 1998 NAEP writing assessment prompts that have been released for publication are presented in Chapter 1 of this report. That chapter used exemplar student responses to illustrate the three achievement levels, Basic, Proficient, and Advanced. This chapter is designed to provide more information about the evaluation of student responses.

The chapter begins with information about the performance of students at the three grades assessed ( 4,8 , and 12 ) on narrative, informative, and persuasive writing. The writing brochures for grades 4,8 , and 12 are reprinted in this chapter, following the presentation of student responses. It then shows the scoring guides that were used to evaluate student responses. The chapter then presents samples of student responses rated at each of the six levels on the scoring guides, to illustrate the full range of student responses. Those responses are given for a fourth-grade narrative prompt, an eighth-grade informative prompt, and a twelfth-grade persuasive prompt.

All students who took the assessment were given brochures which provided suggestions for planning and reviewing their writing. The writing brochures for grades 4,8 , and 12 are reprinted in this chapter, following the presentation of student responses. This chapter concludes with item maps that show where different levels of performance on the nine released writing prompts fall on the NAEP writing scale.

## Overall Ratings on the Writing Assessment

In addition to examining how student writing was scored, it may be useful to see, for all the 25 -minute prompts in the assessment, the percentage of students' responses rated at each of the six levels on the scoring guide. As Table 6.1 shows, 53 percent of fourth-grade responses, 57 percent of eighth-grade responses, and 69 percent of twelfth-grade responses received ratings in the upper half of the scoring guide ("Sufficient" or better).

## Table 6.1

Percentage of responses rated at different levels on the scoring guides on all 25 -minute writing prompts: 1998

|  | Unsatisfactory <br> (1) | Insufficient (2) | Uneven <br> (3) | Sufficient <br> (4) | Skillfu (5) | Excellent <br> (6) |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Grade 4 |  |  |  |  |  |  |
| Overall | 4 | 11 | 33 | 38 | 12 | 3 |
| Narrative | 2 | 10 | 29 | 38 | 16 | 4 |
| Informative | 3 | 10 | 38 | 37 | 9 | 2 |
| Persuasive | 4 | 9 | 30 | 44 | 10 | 2 |
| Grade 8 |  |  |  |  |  |  |
| Overall | 3 | 11 | 29 | 41 | 13 | 3 |
| Narrative | 2 | 11 | 26 | 39 | 17 | 5 |

| Informative | 3 | 6 | 17 | 43 | 26 | 5 |
| Persuasive | 3 | 11 | 24 | 41 | 17 | 5 |
| NOTE: Percentages may not add to 100 due to rounding. <br> SOURCE: National Center for Education Statistics, National Assessment of Education Progress (NAEP), 1998 Writing Assessment. |  |  |  |  |  |  |
|  |  |  |  |  |  |  |

As shown in Table 6.1, in the overall ratings of student responses at each grade, 3 to 4 percent were rated "Excellent," the highest rating on the 6 -point scoring guide. As reported in Chapter l, only l percent of students in each grade attained the Advanced achievement level in writing. It is worth noting that in order to reach the Advanced level, students would have needed to demonstrate Advanced performance on both of the 25 -minute writing prompts they were assigned.

## Narrative, Informative, and Persuasive Writing

Telling a story, writing an informative essay, or writing a persuasive letter have certain things in common: for all, the writer must develop and organize ideas, use language effectively, and be aware of the audience. The writer's task differs for the three kinds of writing, however. By focusing on responses at the "Uneven" (3) level and better, this section describes what students were able to do in each of those kinds of writing for each grade assessed in NAEP.

## Narrative Writing: Weaving a Story

How do writers tell a story? The storyteller weaves plot, character, language, and detail into a whole to create the illusion of reality. Prompts like "Castle" (released in this report) presented fourth-grade students with a fairy-tale-like situation. In response, students wrote stories in which the hero or heroine had adventures such as meeting princesses and giants. Other prompts used cartoons, photographs, or drawings to stimulate fourth graders' creativity. In responses rated "Skillful" or "Excellent," fourth graders produced clear stories by writing effective dialogue, creating characters, and creating suspense. Stories rated "Sufficient" provided a clear sequence of events, but sometimes made abrupt shifts in time or place. Such shifts tended to impede the story's progress in students' responses rated "Uneven," even though those writers still attempted a complete story.

Eighth-grade prompts asked students to write many kinds of stories (including first- and third-person narratives), and sometimes to interpret visual or written materials in writing their stories. In general, eighth-grade students provided more developed characters and plots than fourth graders did. In "Skillful" or "Excellent" responses, they used narrative techniques to interweave event and characterization. Precise language made their responses vivid. Eighthgrade narratives rated "Sufficient" were somewhat developed but lacked details. Those rated "Uneven" had the outlines of a story but had repetition that weakened the story line or problems in controlling sentence boundaries (run-on or incomplete sentences).

Twelfth graders were typically asked, for their narratives, to assume the voice of a character or to write in a particular genre. In responses rated "Skillful" or "Excellent," some students used retrospective storytelling, in which a character revealed the past from the point of view of experience (see the student response on pages 48 and 49 of Chapter l). Others enlivened their tales with humor. The ability to manipulate narrative voice and tone distinguished twelfth-grade writing at the highest levels. In "Sufficient" responses, students told clear stories enlivened with some details; responses rated "Uneven" were clear stories that lacked details or tight organization.

## Informative Writing: Describing, Designing, Explaining

To inform a reader, the writer must understand the subject to be conveyed, organize it, and present it clearly. Informative writing prompts varied among the grades, asking students to present different kinds of information in a variety of ways.

In most fourth-grade prompts, students were asked to write about familiar subjects (such as the "Favorite Object" prompt), while others provided photographs to interpret or letters to answer. Fourth graders who wrote "Skillful" and "Excellent" responses developed ideas with specific details and organized them clearly, through comparison and contrast, for example. In responses rated "Sufficient," students presented a clear sequence of information, but with ideas that were only generally related. And fourth-grade responses rated "Uneven" presented some ideas, but not in a clear sequence or with only partial development.

At eighth grade, students were given more new information to assimilate and present (in charts, pictures, or letters) and a greater variety of audiences (such as a school board, friend, or educational television network president). Some were asked to design something new (as in the "Designing a TV Show" prompt reprinted in this report) or to draw on background knowledge. That could involve choosing a particular experience to illustrate a point, or describing an object, place, or something read. In responses rated "Skillful" or "Excellent," eighth-grade students developed information fully with details and organized it well, using transitions or other devices to link sections. Some took a more personal tone, others a more impersonal tone. The form of responses also varied; some students provided clearly-marked introductions and conclusions. Others incorporated narrative strategies (for example, by describing a sample episode of an educational television show for the "Designing a TV Show" prompt). "Sufficient" responses were organized but did not connect sections clearly, while "Uneven" responses provided general information or were somewhat repetitive.

At twelfth grade, students had to present information to both formal and informal audiences, in forms that ranged from letters to essays to reports. For the "Writing Mentor" prompt, for example, twelfth graders were asked to write a letter to a tenth grader about how to write in high school. This task required the ability to condense knowledge clearly for a younger reader. Other prompts asked twelfth graders to draw on knowledge of something read or studied, to consider the pros and cons of a recent social development, or to interpret an experience in light of a particular theme. In responses that drew on background knowledge, twelfth graders typically gave more detailed accounts of things read or studied or of experiences than eighth graders.

In responses rated "Skillful" or "Excellent," twelfth-grade students did not
simply provide information but organized it to guide the reader through it smoothly. Students who wrote "Sufficient" responses organized information but did not elaborate on details or provide a structure to guide the reader through the information. Responses rated "Uneven" had some details, but had parts that were unclear or undeveloped.

## Persuasive Writing: Convincing the Reader

Persuasion in writing can be a gentle or more forceful art. Often, the most persuasive writing does not simply refute opponents' arguments but uses more subtle approaches, including rhetorical strategies such as rhetorical questions or illustrative stories. Most fourth-grade persuasive prompts drew on students' own knowledge or experience. Students were asked to enter into debates or to write letters to teachers or friends convincing them to take action (as in the "Invisible Friend" prompt, in which students had to convince an imaginary friend to become visible). Fourth graders used persuasive strategies such as classifying advantages and disadvantages of a situation. In responses rated "Skillful" or "Excellent," fourth graders took clear positions, developing support through specific details or examples. In responses rated "Sufficient," fourth graders provided support for a position; students whose responses were rated "Uneven" provided a clear position but showed some difficulties supporting it.

Most eighth-grade persuasive prompts had a wider context, asking students to address issues relevant to their schools. For "Lengthening the School Year," for example, eighth graders responded to the proposition that students should go to school in the summer. Students who wrote "Skillful" and "Excellent" responses used direct appeals to their audience, like the student who pleaded against lengthening the school year by noting that the adults running the country now did not go to school any longer than today's students! At eighth grade, by contrast to fourth grade, in "Skillful" and "Excellent" responses, students went beyond providing evidence for a position to developing a complete argument with appropriate reasons. In responses rated "Sufficient," students provided clear reasons for a position, but did not clearly connect sections of their responses. In "Uneven" responses, students provided reasons but had uneven organization.

Most twelfth-grade persuasive prompts broadened the writing context beyond the school orientation of the eighth-grade prompts, asking for writing that ranged from letters to an editor to debates on the merits of particular social changes. The "One Vote" prompt, which asked students to consider the importance of voting, became a way for students to analyze the importance of participating in a democracy. In twelfth-grade writing rated "Skillful" and "Excellent," students constructed coherent arguments throughout their responses. Some students carefully weighed both sides of an issue before choosing one. Others used rhetorical strategies such as humor, repetition or
rhetorical questions to appeal to an audience. Students who earned the "Sufficient" rating constructed arguments with reasons, but did not link reasons to each other throughout. In "Uneven" responses, students took a position, but provided some support that was undeveloped or irrelevant.

## Evaluating Student Responses

Both the prompts and scoring guides were designed to be appropriate to each grade ( 4,8 , and 12 ). This section presents the scoring guides used in the assessment, one sample prompt at each grade, and student responses at each rating on the scoring guide. The prompts illustrate the kinds of writing most frequent at each grade level: narrative at grade 4 , informative at grade 8 (for which there was the same number of prompts as for narrative), and persuasive at grade 12. The frequency of the three kinds of writing at each grade is based on the emphases they receive in instruction, to be appropriate to the grade level.

## Grade 4 Narrative Scoring Guide

## 6 Excellent Response

- Tells a well-developed story with relevant descriptive details across the response.
- Events are well connected and tie the story together with transitions across the response.
- Sustains varied sentence structure and exhibits specific word choices.
- Exhibits control over sentence boundaries; errors in grammar, spelling, and mechanics do not interfere with understanding.

## 5 Skillful Response

- Tells a clear story with some development, including some relevant descriptive details.
- Events are connected in much of the response; may lack some transitions.
- Exhibits some variety in sentence structure and exhibits some specific word choices.
- Generally exhibits control over sentence boundaries; errors in grammar, spelling, and mechanics do not interfere with understanding.

## 4 Sufficient Response

- Tells a clear story with little development; has few details.
- Events are generally related; may contain brief digressions or inconsistencies.
- Generally has simple sentences and simple word choice; may exhibit uneven control over sentence boundaries.
- Has sentences that consist mostly of complete, clear, distinct thoughts; errors in grammar, spelling, and mechanics generally do not interfere with understanding.

3 Uneven Response (may be characterized by one or more of the following:)

- Attempts to tell a story, but tells only part of a story, gives a plan for a story, or is list-like.
- Lacks a clear progression of events; elements may not fit together or be in sequence.
- Exhibits uneven control over sentence boundaries and may have some inaccurate word choices.
- Errors in grammar, spelling, and mechanics sometimes interfere with understanding.

2 Insufficient Response (may be characterized by one or more of the following:)

- Attempts a response, but is no more than a fragment or the beginning of a story $O R$ is very repetitive.
- Is very disorganized OR too brief to detect organization.
- Exhibits little control over sentence boundaries and sentence formation; word choice is inaccurate in much of the response.
- Characterized by misspellings, missing words, incorrect word order; errors in grammar, spelling, and mechanics are severe enough to make understanding very difficult in much of the response.

1 Unsatisfactory Response (may be characterized by one or more of the following:)

- Attempts a response, but may only paraphrase the prompt or be extremely brief.
- Exhibits no control over organization.
- Exhibits no control over sentence formation; word choice is inaccurate across the response.
- Characterized by misspellings, missing words, incorrect word order; errors in grammar, spelling, and mechanics severely impede understanding across the response.

## 6 Excellent Response

- Tells a clear story that is well developed and shaped with well-chosen details across the response.
- Is well organized with strong transitions.
- Sustains variety in sentence structure and exhibits good word choice.
- Errors in grammar, spelling, and punctuation are few and do not interfere with understanding.

## 5 Skillful Response

- Tells a clear story that is developed and shaped with details in parts of the response.
- Is clearly organized, but may lack some transitions and/or have occasional lapses in continuity.
- Exhibits some variety in sentence structure and some good word choices.
- Errors in grammar, spelling, and punctuation do not interfere with understanding.

## 4 Sufficient Response

- Tells a clear story that is developed with some details.
- The parts of the story are generally related, but there are few or no transitions.
- Exhibits control over sentence boundaries and sentence structure, but sentences and word choice may be simple and unvaried.
- Errors in grammar, spelling, and punctuation do not interfere with understanding.

3 Uneven Response (may be characterized by one or more of the following:)

- Attempts to tell a story, but parts of the story are unclear, undeveloped, list-like, or repetitive OR offers no more than a well-written beginning.
- Is unevenly organized; parts of the story may be unrelated to one another.
- Exhibits uneven control over sentence boundaries and sentence structure; may have some inaccurate word choices.
- Errors in grammar, spelling, and punctuation sometimes interfere with understanding.

2 Insufficient Response (may be characterized by one or more of the following:)

- Attempts to tell a story, but the attempt may be a fragment and/or very undeveloped.
- Is very disorganized throughout the response OR too brief to detect organization.
- Minimal control over sentence boundaries and sentence structure; word choice may often be inaccurate.
- Errors in grammar or usage (such as missing words or incorrect word use or word order), spelling, and punctuation interfere with understanding in much of the response.

1 Unsatisfactory Response (may be characterized by one or more of the following:)

- Responds to prompt, but provides little or no coherent content OR merely paraphrases the prompt.
- Has no apparent organization OR consists of a single statement.
- Minimal or no control over sentence boundaries and sentence structure; word choice may be inaccurate in much or all of the response.
- A multiplicity of errors in grammar or usage (such as missing words or incorrect word use or word order), spelling, and punctuation severely impedes understanding across the response.

## Grade 12 Narrative Scoring Guide

## 6 Excellent Response

- Tells a clear story that is consistently well developed and detailed; details enhance story being told.
- Is well organized; integrates narrative events into a smooth telling; effective transitions move the story forward.
- Consistently exhibits variety in sentence structure and precision in word choice.
- Errors in grammar, spelling, and punctuation are few and do not interfere with understanding.

## 5 Skillful Response

- Tells a clear story that is well developed and elaborated with details in much of the response.
- Is well organized with story elements that are connected across most of the response; may have occasional lapses in transitions.
- Exhibits some variety in sentence structure and uses good word choice; occasionally, words may be used inaccurately.
- Errors in grammar, spelling, and punctuation do not interfere with understanding.

## 4 Sufficient Response

- Tells a clear story that is developed with some pertinent details.
- Is generally organized, but transitions among parts of the story may be lacking.
- Sentence structure may be simple and unvaried; word choice is mostly accurate.
- Errors in grammar, spelling, and punctuation do not interfere with understanding.

3 Uneven Response (may be characterized by one or more of the following:)

- Tells a story that may be clear and developed in parts; other parts are unfocused, repetitive, or minimally developed OR response is no more than a well-written beginning.
- Is organized in parts of the response; other parts are disjointed and/or lack transitions.
- Exhibits uneven control over sentence boundaries and sentence structure; may exhibit some inaccurate word choices.
- Errors in grammar, spelling, and punctuation sometimes interfere with understanding.

2 Insufficient Response (may be characterized by one or more of the following:)

- Attempts to tell a story, but is very undeveloped, list-like, or fragmentary
- Is disorganized or unfocused in much of the response OR the response is too brief to detect organization.
- Minimal control over sentence boundaries and sentence structure; word choice may often be inaccurate.
- Errors in grammar, spelling, and punctuation interfere with understanding in much of the response.

1 Unsatisfactory Response (may be characterized by one or more of the following:)

- Responds to prompt but provides little or no coherent content OR merely paraphrases the prompt.
- Has little or no apparent organization.
- Minimal or no control over sentence boundaries and sentence structure; word choice may be inaccurate in much or all of the response.
- Errors in grammar, spelling, and punctuation severely impede understanding across the response.

## Grade 4 Informative Scoring Guide

## 6 Excellent Response

- Develops ideas well and uses specific, relevant details across the response.
- Is well organized with clear transitions.
- Sustains varied sentence structure and exhibits specific word choices.
- Exhibits control over sentence boundaries; errors in grammar, spelling, and mechanics do not interfere with understanding.

## 5 Skillful Response

- Develops ideas with some specific, relevant details.
- Is clearly organized; information is presented in an orderly way, but response may lack transitions.
- Exhibits some variety in sentence structure and exhibits some specific word choices.
- Generally exhibits control over sentence boundaries; errors in grammar, spelling, and mechanics do not interfere with understanding.

## 4 Sufficient Response

- Clear but sparsely developed; may have few details.
- Provides a clear sequence of information; provides pieces of information that are generally related to each other.
- Generally has simple sentences and simple word choice; may exhibit uneven control over sentence boundaries.
- Has sentences that consist mostly of complete, clear, distinct thoughts; errors in grammar, spelling, and mechanics generally do not interfere with understanding.

3 Uneven Response (may be characterized by one or more of the following:)

- Provides limited or incomplete information; may be list-like or have the quality of an outline.
- Is disorganized or provides a disjointed sequence of information.
- Exhibits uneven control over sentence boundaries and may have some inaccurate word choices.
- Errors in grammar, spelling, and mechanics sometimes interfere with understanding.

2 Insufficient Response (may be characterized by one or more of the following:)

- Provides little information and makes little attempt at development.
- Is very disorganized OR too brief to detect organization.
- Exhibits little control over sentence boundaries and sentence formation; word choice is inaccurate in much of the response.
- Characterized by misspellings, missing words, incorrect word order; errors in grammar, spelling, and mechanics are severe enough to make understanding very difficult in much of the response.

1 Unsatisfactory Response (may be characterized by one or more of the following:)

- Attempts a response, but may only paraphrase the prompt or be extremely brief.
- Exhibits no control over organization.
- Exhibits no control over sentence formation; word choice is inaccurate across the response.
- Characterized by misspellings, missing words, incorrect word order; errors in grammar, spelling, and mechanics severely impede understanding across the response.

## Grade 8 Informative Scoring Guide

## 6 Excellent Response

- Develops and shapes information with well-chosen details across the response.
- Is well organized with strong transitions.
- Sustains variety in sentence structure and exhibits good word choice.
- Errors in grammar, spelling, and punctuation are few and do not interfere with understanding.

## 5 Skillful Response

- Develops and shapes information with details in parts of the response.
- Is clearly organized, but may lack some transitions and/or have occasional lapses in continuity.
- Exhibits some variety in sentence structure and some good word choices.
- Errors in grammar, spelling, and punctuation do not interfere with understanding.

## 4 Sufficient Response

- Develops information with some details.
- Organized with ideas that are generally related, but has few or no transitions.
- Exhibits control over sentence boundaries and sentence structure, but sentences and word choice may be simple and unvaried.
- Errors in grammar, spelling, and punctuation do not interfere with understanding.

3 Uneven Response (may be characterized by one or more of the following:)

- Presents some clear information, but is listlike, undeveloped, or repetitive OR offers no more than a well-written beginning.
- Is unevenly organized; the response may be disjointed.
- Exhibits uneven control over sentence boundaries and sentence structure; may have some inaccurate word choices.
- Errors in grammar, spelling, and punctuation sometimes interfere with understanding.

2 Insufficient Response (may be characterized by one or more of the following:)

- Presents fragmented information OR may be very repetitive OR may be very undeveloped.
- Is very disorganized; thoughts are tenuously connected OR the response is too brief to detect organization.
- Minimal control over sentence boundaries and sentence structure; word choice may often be inaccurate.
- Errors in grammar or usage (such as missing words or incorrect word use or word order), spelling, and punctuation interfere with understanding in much of the response.

1 Unsatisfactory Response (may be characterized by one or more of the following:)

- Attempts to respond to prompt, but provides little or no coherent information; may only paraphrase the prompt
- Has no apparent organization OR consists of a single statement
- Minimal or no control over sentence boundaries and sentence structure; word choice may be inaccurate in much or all of the response.
- A multiplicity of errors in grammar or usage (such as missing words or incorrect word use or word order), spelling, and punctuation severely impedes understanding across the response.

## Grade 12 Informative Scoring Guide

## 6 Excellent Response

- Information is presented effectively and consistently supported with well-chosen details.
- Is focused and well organized, with a sustained controlling idea and effective use of transitions.
- Consistently exhibits variety in sentence structure and precision in word choice.
- Errors in grammar, spelling, and punctuation are few and do not interfere with understanding.

## 5 Skillful Response

- Information is presented clearly and supported with pertinent details in much of the response.
- Is well organized, but may lack some transitions.
- Exhibits some variety in sentence structure and uses good word choice; occasionally, words may be used inaccurately.
- Errors in grammar, spelling, and punctuation do not interfere with understanding.

## 4 Sufficient Response

- Information is presented clearly and supported with some pertinent details.
- Is generally organized, but has few or no transitions among parts.
- Sentence structure may be simple and unvaried; word choice is mostly accurate.
- Errors in grammar, spelling, and punctuation do not interfere with understanding.

3 Uneven Response (may be characterized by one or more of the following:)

- Information is presented clearly in parts; other parts are undeveloped or repetitive OR response is no more than a well-written beginning.
- Is organized in parts of the response; other parts are disjointed and/or lack transitions.
- Exhibits uneven control over sentence boundaries and sentence structure; may exhibit some inaccurate word choices.
- Errors in grammar, spelling, and punctuation sometimes interfere with understanding.

2 Insufficient Response (may be characterized by one or more of the following:)

- Provides information that is very undeveloped or list-like.
- Is disorganized or unfocused in much of the response OR the response is too brief to detect organization.
- Minimal control over sentence boundaries and sentence structure; word choice may often be inaccurate.
- Errors in grammar, spelling, and punctuation interfere with understanding in much of the response.

1 Unsatisfactory Response (may be characterized by one or more of the following:)

- Responds to prompt, but may be incoherent OR provides very minimal information OR merely paraphrases the prompt.
- Exhibits little or no apparent organization.
- Minimal or no control over sentence boundaries and sentence structure; word choice may be inaccurate in much or all of the response.
- Errors in grammar, spelling, and punctuation severely impede understanding across the response.

## Grade 4 Persuasive Scoring Guide

## 6 Excellent Response

- Takes a clear position and develops support with well-chosen details, reasons, or examples across the response.
- Is well organized; maintains focus.
- Sustains varied sentence structure and exhibits specific word choices.
- Exhibits control over sentence boundaries; errors in grammar, spelling, and mechanics do not interfere with understanding.

## 5 Skillful Response

- Takes a clear position and develops support with some specific details, reasons, or examples.
- Provides some organization of ideas by, for example, using contrast or building to a point.
- Exhibits some variety in sentence structure and exhibits some specific word choices.
- Generally exhibits control over sentence boundaries; errors in grammar, spelling, and mechanics do not interfere with understanding.

## 4 Sufficient Response

- Takes a clear position with support that is clear and generally related to the issue.
- Is generally organized.
- Generally has simple sentences and simple word choice; may exhibit uneven control over sentence boundaries.
- Has sentences that consist mostly of complete, clear, distinct thoughts; errors in grammar, spelling, and mechanics generally do not interfere with understanding.

3 Uneven Response (may be characterized by one or more of the following:)

- Takes a position and offers limited or incomplete support; some reasons may not be clear or related to the issue.
- Is disorganized OR provides a disjointed sequence of information.
- Exhibits uneven control over sentence boundaries and may have some inaccurate word choices.
- Errors in grammar, spelling, and mechanics sometimes interfere with understanding.

2 Insufficient Response (may be characterized by one or more of the following:)

- Takes a position, but provides only minimal support (generalizations or a specific reason or example); OR attempts to take a position but the position is unclear.
- Is very disorganized or too brief to detect organization.
- May exhibit little control over sentence boundaries and sentence formation; word choice is inaccurate in much of the response.
- Characterized by misspellings, missing words, incorrect word order; errors in grammar, spelling, and mechanics may be severe enough to make understanding very difficult in much of the response.

1 Unsatisfactory Response (may be characterized by one or more of the following:)

- Takes a position, but provides no support OR attempts to take a position (is on topic), but position is very unclear; may only paraphrase the prompt.
- Exhibits no control over organization.
- Exhibits no control over sentence formation; word choice is inaccurate across the response.
- Characterized by misspellings, missing words, incorrect word order; errors in grammar, spelling, and mechanics severely impede understanding across the response.

## Grade 8 Persuasive Scoring Guide

## 6 Excellent Response

- Takes a clear position and develops it consistently with well-chosen reasons and/or examples across the response.
- Is well organized with strong transitions.
- Sustains variety in sentence structure and exhibits good word choice.
- Errors in grammar, spelling, and punctuation are few and do not interfere with understanding.

## 5 Skillful Response

- Takes a clear position and develops it with reasons and/or examples in parts of the response.
- Is clearly organized, but may lack some transitions and/or have occasional lapses in continuity.
- Exhibits some variety in sentence structure and some good word choices.
- Errors in grammar, spelling, and punctuation do not interfere with understanding.

## 4 Sufficient Response

- Takes a clear position and supports it with some reasons and/or examples.
- Is organized with ideas that are generally related, but there are few or no transitions.
- Exhibits control over sentence boundaries and sentence structure, but sentences and word choice may be simple and unvaried.
- Errors in grammar, spelling, and punctuation do not interfere with understanding.

3 Uneven Response (may be characterized by one or more of the following:)

- Takes a position and offers support, but may be unclear, repetitive, list-like, or undeveloped.
- Is unevenly organized; the response may be disjointed.
- Exhibits uneven control over sentence boundaries and sentence structure; may have some inaccurate word choices.
- Errors in grammar, spelling, and punctuation sometimes interfere with understanding.

2 Insufficient Response (may be characterized by one or more of the following:)

- Takes a position, but response may be very unclear, very undeveloped, or very repetitive.
- Is very disorganized; thoughts are tenuously connected OR the response is too brief to detect organization.
- Minimal control over sentence boundaries and sentence structure; word choice may often be inaccurate.
- Errors in grammar or usage (such as missing words or incorrect word use or word order), spelling, and punctuation interfere with understanding in much of the response.

1 Unsatisfactory Response (may be characterized by one or more of the following:)

- Attempts to take a position (addresses topic) but response is incoherent OR takes a position but provides no support; may only paraphrase the prompt.
- Has no apparent organization OR consists of a single statement.
- Minimal or no control over sentence boundaries and sentence structure; word choice may be inaccurate in much or all of the response.
- A multiplicity of errors in grammar or usage (such as missing words or incorrect word use or word order), spelling, and punctuation severely impedes understanding across the response.

## Grade 12 Persuasive Scoring Guide

## 6 Excellent Response

- Takes a clear position and supports it consistently with well-chosen reasons and/or examples; may use persuasive strategy to convey an argument.
- Is focused and well organized, with effective use of transitions.
- Consistently exhibits variety in sentence structure and precision in word choice.
- Errors in grammar, spelling, and punctuation are few and do not interfere with understanding.

## 5 Skillful Response

- Takes a clear position and supports it with pertinent reasons and/or examples through much of the response.
- Is well organized, but may lack some transitions.
- Exhibits some variety in sentence structure and uses good word choice; occasionally, words may be used inaccurately.
- Errors in grammar, spelling, and punctuation do not interfere with understanding.

## 4 Sufficient Response

- Takes a clear position and supports it with some pertinent reasons and/or examples; there is some development.
- Is generally organized, but has few or no transitions among parts.
- Sentence structure may be simple and unvaried; word choice is mostly accurate.
- Errors in grammar, spelling, and punctuation do not interfere with understanding.

3 Uneven Response (may be characterized by one or more of the following:)

- Takes a position and provides uneven support; may lack development in parts or be repetitive OR response is no more than a well-written beginning.
- Is organized in parts of the response; other parts are disjointed and/or lack transitions.
- Exhibits uneven control over sentence boundaries and sentence structure; may exhibit some inaccurate word choices.
- Errors in grammar, spelling, and punctuation sometimes interfere with understanding.

2 Insufficient Response (may be characterized by one or more of the following:)

- Takes a position but response is very undeveloped.
- Is disorganized or unfocused in much of the response OR clear but very brief.
- Minimal control over sentence boundaries and sentence structure; word choice may often be inaccurate
- Errors in grammar, spelling, and punctuation interfere with understanding in much of the response.

1 Unsatisfactory Response (may be characterized by one or more of the following:)

- Attempts to take a position (addresses topic), but position is very unclear OR takes a position, but provides minimal or no support; may only paraphrase the prompt.
- Exhibits little or no apparent organization.
- Minimal or no control over sentence boundaries and sentence structure; word choice may be inaccurate in much or all of the response.
- Errors in grammar, spelling, and punctuation severely impede understanding across the response.

## Prompt: Castle

One morning a child looks out the window and discovers that a huge castle has appeared overnight. The child rushes outside to the castle and hears strange sounds coming from it. Someone is living in the castle!

The castle door creaks open. The child goes in.
Write a story about who the child meets and what happens inside the castle.

Writing Purpose: Narrative
Responses to this prompt were rated according to the grade 4 narrative scoring guide.

In the imaginative stories written for this prompt, "Castle," characters sometimes appear and disappear rather suddenly. Students who received ratings in the upper half of the six levels on the scoring guide ("Sufficient" or better) were able to weave coherent stories, making effective use of suspense and surprise. Figure 6.1 shows the percentage of student responses to this prompt rated at each of the six levels on the scoring guide (from "Unsatisfactory" through "Excellent"). A sample response for each score level is presented on the following pages.

Figure 6.1
Percentage of responses rated at different levels on the scoring guide, grade 4: Castle

NOTE: Percentages may not add to 100 due to rounding.
SOURCE: National Center for Education Statistics, National Assessment of Educational Progress (NAEP), 1998 Writing Assessment.

The "Unsatisfactory" rating was given to 2 percent of the responses to this prompt. Responses at this level tended either to be so brief that they did not develop a story at all, or to be hard to understand throughout. In the response shown, the student only paraphrases the prompt: "The child meet a castle and go in the castle."

Sample "Unsatisfactory" Response

The "Insufficient" rating was given to 12 percent of the responses to this prompt. In "Insufficient" responses, students produced only the beginning of a story, wrote very disorganized stories, or wrote responses that were understandable only in part. In the response shown, the student begins to tell a story, introducing a new character, the "giant," but does not progress beyond that point.

## Sample "Insufficient" Response

The "Uneven" rating was given to 31 percent of the responses to this prompt. In such responses, students attempted to tell an entire story, but the attempt was incomplete or disorganized. In the "Uneven" response shown, there is some dramatic action ("then he herd something a bat fly and turn in to a vampire"). That action, however, is repetitive, as the events are not connected to form a coherent story: "And then the vampire turned in to a bat again. And it gas on on on on on and on on again."

Sample "Uneven" Response

soorething a bat fly and turn in to n vampire. Ho ran out of the dor Haling for help while running. out the door. Than the vampire turned in to a bat again. And the bay never went there again. Then a year later a gid went there and opened the odor and seen died fish at the

The "Sufficient" rating was given to 38 percent of the responses to this prompt. In such responses, students told complete stories that were organized and clear, but lacking in detail. In the sample below, the student provides a clear but bare plot. He or she includes the vivid detail of the colors of the rainbow in the first sentence, but uses detail sparingly beyond that. Though the story does not conclude, enough action occurs that most of the development is clear. The simple, but essentially clear and correct, sentence structure and vocabulary are typical of responses at this level.

## Sample "Sufficient" Response

The "Skillful" rating was given to 14 percent of the responses to this prompt. In such responses, students used details to develop their stories in parts of the response. They provided a good structure to their stories, though with occasional lack of transitions. In the sample "Skillful" response, the plot occasionally shifts abruptly, as when the boy "sees a woman" who looks like him and they suddenly start to "walk through the castle." Though the ending is concise, the student ties up the story with the revelation "Then the girl realizes the boy in the picture is her long Lost Brother."

## Sample "Skillful" Response

First te sees a dark room filled with object some tia some small pome she it sort tall. No che us reaching for the light surtch something grabs hes hand and turns on on for him. As it turn sees a pom an s A bratiful one captures hus ergs. The look so much Ache castle Elemalk through Stoves about la hor her
shourna la to Les picture
from there lite The ale says she had a long apo. She says the lowest eke this and ahoured

The "Excellent" rating was given to 3 percent of the responses to this prompt. Such responses may have excelled through good development of plot, characters, or dialogue. In the response shown, the student uses dialogue effectively, develops characters, and provides a coherent plot. The student shows good control of language for a fourth grader and includes vivid details about appearance - "He was dressed in royalty with a purple cape and a crown of jewels."
"Wow a castle". said John. He
had know clue of how it got here or where it came from? He walked inside and found that it was rather damp. The undered around until finally
look normal. He was dressed in royalty with a purple cape and a crown of jewels. Then the person spoke out "There you are you're supposed to be training right sow.' John had know clue what he was talking about, Suddenly he thought of something, was this the king of the castle? He finally got the nerve to ask a question. He asked "Who are you". He answered "I'm the King" John was shocked. Then the King told hin to get on his armor. John thought and thought. Then he knew what he was talking about. He though the was a knight. John thought again. If he was to be a knight then he wand sever his family
again. then he thought of his again. Then he thought of his
older sister, lennifer He decided to be a knight. After about 2 months he- finally was knighted. He fought many dragons and man. He finally died but isst.ll a legend today.

By: Unknown

## Prompt: Designing a TV Show

A public television network is seeking ideas for a new series of shows that would be educational for teenagers. The series will include ten one-hour episodes and will be shown once a week. Some of the titles under consideration are:
"Great Cities of the World"
"Women in History"
"Nature Walks"
"American Legends"
Choose one of these titles. Write a letter to the network president describing your ideas for a new educational series. In your letter, describe what one episode might be like. Use specific examples of what information you would include in the episode so the network president will be able to imagine what the series would be like.

Writing Purpose: Informative
Responses to this prompt were rated according to the grade 8 informative scoring guide.

In responding to this prompt, students at the upper score levels
("Sufficient" or better) provided organized responses with illustrative details. Some students provided descriptions of an entire episode, down to the dialogue and camera angles.

Figure 6.2 shows the percentage of student responses rated at each of the six levels on the scoring guide (from "Unsatisfactory" through "Excellent") for the "Designing a TV Show" prompt.

## Figure 6.2 Percentage of responses rated at different levels on the

 scoring guide, grade 8: Designing a TV Show

NOTE: Percentages may not add to 100 due to rounding.
SOURCE: National Center for Education Statistics, National Assessment of Educational Progress (NAEP), 1998 Writing Assessment.

Table 6.2 shows, for students in each jurisdiction that participated in the grade 8 state NAEP writing assessment, the percentage of student responses receiving ratings at each of the six levels on the scoring guide. The information in that table is for public schools only, for both the nation and the states.

## Table 6.2

Percentage of responses rated at different levels on the scoring guide by jurisdiction for Designing a TV Show, grade 8 public schools only: 1998

NOTE: National results are based on the national assessment sample, not on aggregated state assessment samples. Differences between states and jurisdictions may be partially explained by other factors not included in this table.
SOURCE: National Center for Education Statistics, National Assessment of Educational Progress (NAEP), 1998 Writing Assessment.

The "Unsatisfactory" rating was given to 3 percent of the responses to this prompt. Such responses were very undeveloped or very poorly written. In the "Unsatisfactory" response shown, the student chooses one of the series titles provided in the prompt and asks what to include, without presenting his or her ideas about what to show on the television series.

## Sample "Unsatisfactory" Response

The "Insufficient" rating was given to 13 percent of the responses to this prompt. Such responses supplied only minimal information about the student's choice of an educational television series. In the example presented here, the student provides a justification for the series: "You would get to learn about all the cities instead of just one city." However, the student does not develop that justification by describing the substance of the show.

## Sample "Insufficient" Response

## Dear President

I think ever should do the serve on "Manat
cutie of the Wold". If you did the series at of that title it would le lest. You would get to learn about all the cities instead of yet one city Because tunnages could learn Plat other cities in other coventries. 1 hat's why et thine you should do the
series on seat cities of the Word."

The "Uneven" rating was given to 40 percent of the responses to this prompt. In many of these responses, students mentioned a few specific elements to be presented on the television series, but listed rather than developed them. In the "Uneven" paper shown, the student enumerates various "American Legends" to be presented, along with an identifying detail or two about George Washington, John F. Kennedy, and Abraham Lincoln, for example: "You could also tell how John F. Kennedy was assasianated or how Abraham Lincon helped in the Cival War." The student, however, does not develop points, and his or her command of the mechanics of writing is uneven.

## Sample "Uneven" Response

The "Sufficient" rating was given to 34 percent of the responses to this prompt. Such responses were organized and provided some details. This sample was also presented as an exemplar of Proficient achievement in Chapter 1. In the response shown, the student's writing is clear, accurate, and organized.

Sample "Sufficient" Response
Dear. Mr. President,
I think you should have a show about "women in history." Aloft of people want to know about women and what thay've done to help our country. There have been many women heroes, and they should be recognized, ion could do the show like wishbone, except all the shows be about women in history instead of characters from a book. An idea for a Show is Anne Frank. You could go to the place where they hid for so long and do the show right there. Everyone will get the chance to see how ane lived. Ant of people haven't heard or seen herstory. Well, it's time they do! So, please take into consideration my ideas and respond when you make your decision.

The "Skillful" rating was given to 8 percent of the responses to this prompt. In such responses, students used detail and elaboration in parts of the response, with transitions to connect ideas. In the response shown, the student specifies who will be the narrators of the show and the order in which information will be presented: "The show is about four teenagers, around the ages of fourteen to seventeen who travel around the world. In each show they travel to two cities. When they arrive in the city they will first talk about the cities history and what it is like now in the present." The student also uses the example of Paris as the subject for one show. The student uses complex sentences and transitions (such as "When they arrive in the city . . . ," "For example . . . .") to tie points together and lead the reader through the essay.

Dear Network president,
I think that I have a
new show for your network. It's
called Great Cities of the World.
The show is about four teenagers, around the ages of fourteen to Seventeen who travel around the world. In each show they travel to two cities. When they arrive in the city they will first talk about the cities history and what it is like now in the present. They talk about some of the tradions in the city. For example if the students went to Paris, France they would talk about France's past and some of the things they do in there daily lives. They could talk about the people, what they look like and their styles. To keep the show intresting you can show things such as we learn how to say a word from their language or meet many different people from their city. Also to keep the show intresting they can have problems

The "Excellent" rating was given to 2 percent of the responses to this prompt, in which students used detail and development across the response. The "Excellent" response shown describes an entire episode of a television series in detail. The student includes such details as how the camera would move: "One place could be the Sears Tower in which a camera could show people going up in an elevator and then seeing the view of downtown Chicago." He or she describes a wide variety of sights in Chicago with suggestions for how to present them. Points such as "I think the camera should look at the city as if it was the viewer's eyes" enable the reader to visualize the show. This student shows good control of language; occasional minor errors do not interfere with meaning.

## Sample "Excellent" Response

 AFor example, one episode could be about Chicago and tell famous places you could visit. One place could be the sears Tower in which a camera could show people going up in ah elevator and then seeing the view of downtown Chicago Qipnother place the tiv. show could go to is the shed Aquarium. In it are many types of ocean life that interesting to see up close. They could also go to the art museum and 100 k at famous paintings. $\mathbb{Q}$ )est for fun, the show could go to F.A.O. Schwartz, a large toy stere with many toys you can play with. As a matter of fact, you could just go shopping period. Chicago is known for
its many stores 9 Then you could take a trip to a restaurant such as ad Debevics or planet Hollywood, just to spice up the show a bit. *Now that Eve explained where to go in Chicago, Ill tell you a little more about the
set-up of the show. I think that you

Tables 6.3 and 6.4 present state-by-state results for the other two eighthgrade prompts, "Space Visitor" and "Lengthening the School Year," which were presented in Chapter 1.

## Prompt: One Vote

Your school is sponsoring a voter registration drive for 18-year-old high school students. You and three of your friends are talking about the project. Your friends say the following.

Friend 1: " I'm working on the young voters' registration drive. Are you going to come to it and register? You're all 18 , so you can do it. We're trying to help increase the number of young people who vote and it shouldn't be too hard - I read that the percentage of 18 - to 20 -year-olds who vote increased in recent years. We want that percentage to keep going up."

Friend 2: "I'll be there. People should vote as soon as they turn 18. It's one of the responsibilities of living in a democracy."

Friend 3: "I don't know if people should even bother to register. One vote in an election isn't going to change anything."

Do you agree with friend 2 or 3? Write a response to your friends in which you explain whether you will or will not register to vote. Be sure to explain why and support your position with examples from your reading or experience. Try to convince the friend with whom you disagree that your position is the right one.

Writing Purpose: Persuasive
Responses to this prompt were rated according to the grade 12 persuasive scoring guide.

Figure 6.3 shows the percentage of responses to the "One Vote" prompt rated at each of the six levels on the scoring guide (from "Unsatisfactory" through "Excellent").

## Figure 6.3

Percentage of responses rated at different levels on the scoring guide, grade 12: One Vote

NOTE: Percentages may not add to 100 due to rounding.
SOURCE: National Center for Education Statistics, National Assessment of Educational Progress (NAEP), 1998 Writing Assessment.

The "Unsatisfactory" rating was given to 4 percent of the responses to this prompt. Such responses were sometimes so unclear that the reader could not tell what position the student was taking. Other responses rated "Unsatisfactory" were extremely undeveloped. For example, in the response shown, the student only states that he or she agrees with one of the three friends in the reported conversation and goes no further.

## Sample "Unsatisfactory" Response

The "Insufficient" rating was given to 21 percent of the responses to this prompt. Such responses were lacking either in organization or development (support of a position with reasons). In the "Insufficient" response included below, the student does not justify his or her position beyond saying that it matters who gets elected.

## Sample "Insufficient" Response

The "Uneven" rating was given to 30 percent of the responses to this prompt. In such responses, students attempted to provide an argument supported with reasons, but faltered through lack of organization, problems with grammar that interfered with understanding, or incomplete development. In the response shown, the student provides a somewhat undeveloped argument, despite the example at the end to illustrate how one vote can make a difference. The student jumps from the point that "everyone should vote to support what they feel is nessecary" to the statement that "l vote can defenatly make a difference" without developing either point.

## Sample "Uneven" Response

The "Sufficient" rating was given to 32 percent of the responses to this prompt. In the "Sufficient" response presented here, the student organizes reasons into a complete, clear argument. Though the reasons are not developed with many details, the paper is organized and unified. The student connects points to build an argument: "many people who don't even vote complain about government leaders. But I say how can you complain if you didn't voice your opinion on who you think has the capability and skills to be a good leader." The control of language is noticeably better than in responses that received ratings below "Sufficient." Some problems with mechanics, especially in the last sentence of the essay, do not impede the overall clarity and unity of the paper.

## Sample "Sufficient" Response

 ours country, cities, counties and parishes. Our right to vote in on s way of getting, what we think owns. community deserves. The roget to rote is your voice in the government, many people who doit even rote complain about govern men leader. Butelray how can you complain if you didnt voice you opinion on who you think has the capability and anils to be a good
leader. Your vote, dang wivithathers unto did int rate, could have made the difference. If no one voted sous county would mot have democracy. We coucal he lead by someone like Ht tither ar prassolini we as Americano hove a chases. use should all take. advantage of that right, to choose who will lead us. Who we choose to run oungovernment hawadirect Affect on us. We shoudal all he will to try to choose

The "Skillful" rating was given to 10 percent of the responses to this prompt. In these responses, students elaborated reasons with details or examples in some, but not all, of the response and used transitions to connect ideas. In the "Skillful" response shown, the student introduces the theme in the first paragraph: "Voting isn't a responsibility, it's an opportunity." The student then points out why it is important to vote: to make the "beliefs of the general public" clear (second paragraph) and "to get an accurate representation of what all citizens want" (third paragraph).

## Sample "Skillful" Response

It is becoming move important that young people vote because c most of the registered voters are older. In order to get an accurate representation of what all citizens want then it is necessary for everyone to be an active voter.

The electoral college, in a way, discourages many people from voting because it eliminates the "or man, ore rote" rule. It is very. likely that many people will think that their va re mokes little or no difference at all. Stories of electors that dons even Vote For their pledged candidate do not help peoples opinios on voting.

The "Excellent" rating was given to 3 percent of the responses to this prompt. Students who wrote "Excellent" responses consistently elaborated reasons with details or examples, used transitions throughout, and often showed greater control over language (fewer errors and greater variety of sentence structure) than papers at the "Skillful" level. In the response shown, the student provides a consistent, elaborated argument and demonstrates a command of rhetoric unusual even for an "Excellent" response to this prompt. This response was also presented in Chapter 1 as an exemplar of Advanced performance at grade 12.

Whether a single person's vote hakes a difference in an election is irretevout. a democratic nation is one that recognizes an individual right to think and formulate an opinion, and voting is a manifestation of that right.

Mankind, the acknowledged ruler of the Earth, has little advantage over the other life-forms he shares existence with As pointed out in the play Inherit the wind, the horse is swifter, the mosquito more prolific, even a simple sponge is mure durable. What separates mankind from other species is his simple brain-power: his ability to think

The founding fathers of america recognized the fatal flaw of other nations - foolish monarchs who calmed absolute authority over their subjects Dictatorial societies have the same root cause of their downfall- the attempts of squelching out personal opinion. Voting celebrates the freedom the nation received on July 4, 1776. voting is not a duty or a chore, it is a priveledge that we as humans have as our only advantage. We have the right and fortunantely because of democratic society, the freed on to think.

Ideas for Planning Your Writing
To plan your writing, you could:

Brainstorm List lots of ideas; then choose the ones you want to use.

OR

Draw Draw a picture that will give you ideas to use in your writing.

## OR

Make a Web Connect your ideas with lines.

## OR

Ideas for Reviewing Your Writing

Spelling?
Capitalization?

Ideas for Planning Your Writing

## To plan and organize your writing,

 you could do one or more of the following:

Brainstorm
List lots of ideas related to your topic; then choose which ones you want to use.

Imagine Imagine talking about your topic with someone to sort out your ideas.

Web
Organize your thoughts by drawing lines between ideas to connect them.

Ideas for Reviewing Your Writing
To review what you have written, you could think about the following:

Development
Do I need to develop my ideas by adding details or do I need to take out some details?

## Organization

Are the sections of my writing clearly connected and in the right order?

## Clarity

Will my audience understand what I wrote?

Correctness
Have I checked for
correctness in

- grammar?
- punctuation?
- spelling?

## Item Maps

The NAEP writing scale summarizes student performance at grades 4,8 , and 12 on the 25 -minute writing prompts that compose each scale. Some prompts are more difficult than others, and some performances in response to the prompts are more skilled than others. One way to interpret the meaning of the 0 -to- 300 writing scale is to show, for various score points, what level of performance on different writing prompts can be expected of students. This description of score points in terms of item performance is an item map. For a particular prompt, the item map shows the point on a scale at which students are likely to attain a particular rating on the six-level scoring guides.

An example of how the item maps present information on the relative difficulty of prompts within a grade level may be helpful. Figure 6.4 shows the item map for three fourth-grade prompts. For the narrative prompt "Castle," those with writing scores at or above 200 on the scale are expected to be able to write responses that were rated "Skillful" or better. For the informative prompt "Favorite Object," those with writing scores at or above 215 on the scale are expected to be able to write responses that were rated "Skillful" or better. In other words, the "item maps" created by this process are visual representations, at each grade, of the writing performance expected of students at different score levels along the NAEP writing scale. ${ }^{1}$ The technical procedure for creating item maps is explained in Appendix A.

The item maps shown on the following pages address the nine prompts released for this report (one for each purpose for writing at each grade). Figures 6.4 through 6.6 present item maps for grades 4,8 , and 12 , respectively. All nine prompts are presented in Chapter 1.

The item maps provide for each purpose for writing (narrative, informative, or persuasive) a selection of prompts, along with a brief description of each prompt, mapped at the point at which students are considered to have the skill to write a response of the indicated quality.

[^25]
## Figure 6.4

Item map of selected 25 -minute writing prompts by purpose on the NAEP writing scale for grade 4: 1998

NOTE: Each grade 4 writing prompt was mapped onto the NAEP 0 -to- 300 writing scale. The map shows, for each level on the scoring guide from 2 ("Insufficient") through 6 ("Excellent"), the scale score attained by students who had a 65 percent probability of attaining that level on the scoring guide or higher. Only selected prompts are presented.

NOTE: Each grade 8 writing prompt was mapped onto the NAEP 0 -to- 300 writing scale. The map shows, for each level on the scoring guide from 2 ("Insufficient") through 6 ("Excellent"), the scale score attained by students who had a 65 percent probability of attaining that level on the scoring guide or higher. Only selected prompts are presented.

## Figure 6.6

Item map of selected 25 -minute writing prompts by purpose on the NAEP writing scale for grade 12: 1998

[^26]
## Summary

Across all 25-minute prompts in the assessment, about 53 percent of fourthgrade student responses, 57 percent of eighth-grade responses, and 69 percent of twelfth-grade responses received ratings of "Sufficient" or better (in the upper half of the six-point scoring guides). These ratings should not be confused with achievement level results. It should be noted that achievement levels were set based on students' responses to both of the two 25 -minute prompts they received.

## APPENDIX A

## Overview of Procedures Used for the NAEP 1998 Writing Assessment

## Introduction

Conducting a large-scale assessment such as the National Assessment of Educational Progress (NAEP) entails the successful coordination of numerous projects, committees, procedures, and tasks. This appendix provides an overview of the NAEP 1998 writing assessment's primary components - framework, development, administration, scoring, and analysis. A more extensive review of the procedures and methods used in the writing assessment will be included in the forthcoming NAEP 1998 Technical Report.

## The NAEP 1998 Writing Assessment

The writing framework underlying the NAEP 1998 writing assessment grew out of a consensus among educators and researchers about the nature of writing performance.

The framework's purpose was to provide a definition of writing on which to base the NAEP assessment. Developing this framework and the specifications that guided development of the assessment involved the critical input of many people, including educators, administrators, state and local government representatives, and members of the business community, the press, and the general public. The framework used in the 1992 writing assessment was forged by a consensus process managed by the Center for Research on Evaluation, Standards, and Student Testing (CRESST) for the National Assessment Governing Board. For the 1998 writing assessment, the Governing Board contracted with American College Testing (ACT) to augment the 1992 framework with a set of writing assessment and exercise specifications that led to the development of new writing prompts and scoring guides. As a result, the NAEP 1998 writing assessment is not comparable to the 1992 NAEP writing assessment, and it is not possible to track trends in writing performance back to 1992.

The framework sets forth a broad definition of writing for three major purposes: narrative, informative, and persuasive. While other types of writing could have been included, the developers of the framework believed that, for the purpose of monitoring student achievement (as opposed to creating individual diagnostic assessments), three broad types of writing were appropriate. The framework emphasizes the importance of being able to produce a variety of written works to suit different purposes and audiences. The framework views writing as a dynamic process through which the writer constructs meaning.

The assessment framework not only specified that three purposes for writing be measured, but also specified the percentage of the writing prompts in the assessment that should be devoted to each. The actual percentage distributions of writing prompts in the assessment are listed in Table i.l on page 5 of the Introduction. That table also shows the number of prompts at each grade level for each purpose. Each prompt received equal weight in the composition of the NAEP scale for each grade. These target percentages vary by grade level according to what was deemed developmentally appropriate for each grade. The table refers only to the 25 -minute prompts.

The grade 4 assessment consisted of twenty 25 -minute prompts. Each fourth-grade student responded to two prompts. At grade 4, there were a total of 8 narrative, 7 informative, and 5 persuasive prompts. At each of grades 8 and 12 , there were twenty 25 -minute prompts and three 50 -minute prompts (one for each purpose for writing: narrative, informative, and persuasive), for a total of 23 prompts at grade 8 and 23 prompts at grade 12 . At grade 8 , the $25-$ minute prompts were distributed as follows: 7 narrative, 7 informative, and 6 persuasive prompts. At grade 12, the distribution of 25 -minute prompts was 5 narrative, 7 informative, and 8 persuasive prompts.

## The Assessment Design

The same test booklets were used for the national and state assessments. Students received test booklets containing either two 25 -minute writing prompts or a single 50 -minute writing prompt. For the state assessments, only booklets with 25 -minute prompts were used. At grade 4 , there were only 25 minute prompts. All of the student responses to the writing prompts were rated according to a six-level scoring guide. In addition, the test booklets contained general background questions and writing-specific background questions.

The assessment design allowed for maximum coverage of the writing domain at each grade, while minimizing the time burden for any one student. This was accomplished through the use of matrix sampling of prompts, in which each student is given only 2 of the 20 or more prompts at each grade level. Representative samples of students respond to each prompt, so that the aggregate results across the entire assessment allow for broad reporting of writing abilities for the targeted population.

In addition to matrix sampling, the assessment design utilized a procedure for distributing booklets that controlled for position and context effects. Students received different prompts in their booklets according to a procedure called "partially balanced incomplete block (pBIB) spiraling." This procedure assigned prompts in a manner that balanced the positioning of prompts across booklets. The test booklets were also constructed to minimize overlap in themes between two prompts in a booklet. The "spiraling" designation means that, when distributed to students, the test booklets are ordered in such a way that typically only a few students in any assessment session receive the same booklet.

In addition to the student assessment booklets, three other instruments provided data relating to the assessment: a teacher questionnaire, a school questionnaire, and a Students with Disabilities/Limited English Proficiency (SD/LEP) questionnaire. The SD/LEP student questionnaire was completed by a school staff member knowledgeable about those students who were selected to participate in the assessment and who were identified as l) having an Individualized Education Plan (IEP) or equivalent plan (for reasons other than being gifted or talented); or 2) being limited English proficient (LEP).

An SD/LEP student questionnaire was completed for each identified student, regardless of whether the student participated in the assessment. Each SD/LEP questionnaire took approximately three minutes to complete and asked about the student and the special programs in which he or she participated.

## National and State Samples

The national and regional results presented in this report are based on nationally representative probability samples of fourth-, eighth-, and twelfth-grade students. The samples were selected by use of a complex multistage design that involved sampling students from selected schools within selected geographic areas across the country. The sample design had the following stages:

1. selection of geographic areas (a county, group of counties, or metropolitan statistical area);
2. selection of schools (public and nonpublic) within the selected areas; and
3. selection of students within selected schools.

Each selected school that participated in the assessment and each student assessed represent a portion of the population of interest. Sampling weights are needed to make valid inferences between the student samples and the respective populations from which they were drawn. Sampling weights account for disproportionate representation due to the oversampling of students who attend schools with high concentrations of Black and/or Hispanic students and of students who attend nonpublic schools. Among other uses, sampling weights also account for lower sampling rates for very small schools.

Table A.l provides a summary of the national school and student participation rates for the NAEP 1998 writing assessment. For those students who received 25 -minute prompts, participation rates are presented for both public and nonpublic schools, individually and combined. At grade 8 , the number of students who received 50 -minute prompts was 4,941 public school and 1,068 nonpublic school students, for a total of 6,009 students. At grade 12, 4,821 public school and 983 nonpublic school students received 50 -minute prompts, for a total of 5,804 students. The 50 -minute prompts were given only to students in the national sample, not to students in the state-by-state sample.

The overall response rate (the product of the weighted school participation rate before substitution and the weighted student participation rate) for grade 12 fell below the NCES reporting target of 70 percent. As a result, the background characteristics of both responding schools and all schools were compared to determine whether there was bias evident. The similarities in the distribution lend support to the conclusion that the data are not seriously biased by these low response rates.

## Table A. 1

NAEP 1998 school and student participation rates for 25-minute writing prompts for the nation: Grades 4,8 , and 12 public schools, nonpublic schools, and combined

|  | Weighted school parricipation |  | Total number of schools participating | Weighted percentage student participation rate | Total number of students assessed |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | Percentage before substitutes | Percentage after substitutes |  |  |  |
| Grade 4 |  |  |  |  |  |
| Public | 80 | 89 | 457 | 95 | 16,330 |
| Nonpublic | 79 | 86 | 221 | 95 | 3,486 |

SOURCE: National Center for Education Statistics, National Assessment of Educational Progress (NAEP), 1998 Writing Assessment

The results of the 1998 state assessment in writing provided in this report are based on state-level samples of eighth-grade students. The samples of both public and nonpublic school eighth-grade students were selected based on a two-stage sample design that entailed selecting schools within participating jurisdictions and then selecting students within schools. The first-stage samples of schools were selected with probability proportional to the eighth-grade enrollment in those schools. Special procedures were used for jurisdictions that have many small schools and for jurisdictions that have a small number of schools.

As with the national samples, the jurisdiction samples were weighted to allow for valid inferences about the populations of interest. Tables A.2a and A. 2 b contain the unweighted number of participating schools and students as well as weighted school and student participation rates. Two weighted school participation rates are provided for each jurisdiction. The first rate is the weighted percentage of schools participating in the assessment before substitution. This rate is based only on the number of schools that were initially selected for the assessment. The numerator of this rate is the sum of the number of students represented by each initially selected school that participated in the assessment. The denominator is the sum of the number of students represented by each of the initially selected schools that had eligible students enrolled. This rate included both participating and nonparticipating schools.

The second school participation rate is the weighted participation rate after substitution. The numerator of this rate is the sum of the number of students represented by each of the participating schools, whether originally selected or substituted. The denominator is the same as that for the weighted participation rate for the initial sample. This statement means that for a given jurisdiction, the weighted participation rate after substitution is at least as great as the weighted participation rate before substitution.

Also presented in Tables A. 2 a and A. 2 b are the weighted percentages of students who participated after makeup sessions were completed. In these tables, the rate reflects the percentage of the eligible student population from participating schools within the jurisdiction, and that percentage represents the students who participated in the assessment in either an initial session or a makeup session. The numerator of this rate is the sum, across all assessed students, of the number of students that each selected student who was eligible to participate represents, including students who did not participate.

## Standards for Sample Participation

In carrying out the 1998 state assessment program, the National Center for Education Statistics (NCES) established participation rate standards that jurisdictions were required to meet in order for their results to be reported (see notations in Tables A.3a and A.3b). NCES also established additional standards that required the notation of published results for jurisdictions whose sample participation rates were low enough to raise concerns about their representativeness.

One jurisdiction, Illinois, failed to meet the initial public school participation rate of 70 percent. For this state, results for eighth-grade public school students are not reported in this or any report of NAEP 1998 state writing assessment findings. Several other jurisdictions whose results were published received a notation to indicate possible nonresponse bias.

The following five jurisdictions failed to meet the initial nonpublic school participation rate of 70 percent: Arizona, Colorado, Illinois, Maine, and Missouri. For nonpublic school participation, Wyoming failed to meet the requirement of a sample size of 62 students. For these jurisdictions, results for eighth-grade nonpublic school students are not reported in this or any report of NAEP 1998 state writing assessment findings. As with public schools, several other jurisdictions whose nonpublic school results were published received a notation to indicate nonresponse bias.

To help ensure adequate sample representation for each jurisdiction participating in the 1998 state assessment program, NAEP provided substitutes for nonparticipating public and nonpublic schools. (When possible, a substitute school was provided for each initially selected school that declined participation.) For jurisdictions that used substitute schools, the assessment results were based on the student data from all schools participating from both the original sample and the substitute schools (unless an initial school and its substitute eventually participated, in which case only the data from the initial school were used). For jurisdictions that did not use substitute schools, the participation rates were based on participating schools from the original sample.

NCES standards require weighted school participation rates before substitution of at least 85 percent to guard against potential bias due to school nonresponse. The NCES standards do not explicitly address the use of substitute schools to replace initially selected schools that declined to participate in the assessment. However, considerable technical consideration has been given to this issue. Even though the characteristics of the substitute schools were matched as closely as possible to the characteristics of the initially selected schools, substitution does not entirely eliminate the possibility of bias because of
the nonparticipation of initially selected schools. Thus, for the weighted school participation rates that included substitute schools, the guideline was set at 90 percent. This consideration is expressed in the following guideline:

A jurisdiction will receive a notation if its weighted participation rate for the initial sample of schools was below 85 percent AND the weighted school participation rate after substitution was below 90 percent.

Five jurisdictions did not meet this guideline for public schools: California, Minnesota, Montana, New York, and Wisconsin. Eleven jurisdictions did not meet this guideline for nonpublic schools: Arkansas, California, Connecticut, Florida, Maryland, Massachusetts, New Mexico, New York, North Carolina, Rhode Island, and Virgin Islands.

The NCES standards further specify that attention should be given to the representativeness of the sample coverage. Thus, inadequate representation of an important segment of a jurisdiction's population is of concern, regardless of the overall participation rate. This consideration is expressed in the following guideline:

A jurisdiction that is not already receiving a notation for problematic overall school or student participation rates will receive a notation if the sampled students within participating schools included a class of students with similar characteristics that had a weighted student response rate of below 80 percent, and from which the nonresponding students together accounted for more than 5 percent of the jurisdiction's weighted assessable student sample. Student groups from which a jurisdiction needed minimum levels of participation were determined by the age of the students, whether or not the student was classified as a student with a disability (SD) or of limited English proficiency (LEP), and the type of assessment session (monitored or unmonitored). In addition, for public schools, classes of schools were determined by school level of urbanization, minority enrollment, and median household income of the area in which the school is located. For nonpublic schools, classes of schools were determined by type and location of schools.

In the 1998 NAEP writing assessment, there were no states that failed to meet this guideline.

The NCES guidelines used to report results in the state assessments, and the guidelines for notation when there is some risk of nonresponse bias in the reported results, are presented in the tables of the following section.

## Guidelines for Notations 1, 2, and 3: The publication of NAEP results

The conditions that will result in the publication of a jurisdiction's results are presented below.

## Guideline 1 - Publication of Public School Results:

A jurisdiction will have its public school results published in the NAEP 1998 Writing Report Card (or in other reports that include all state-level results) if and only if its weighted participation rate for the initial sample of public schools is greater than or equal to 70 percent. Similarly, a jurisdiction will receive a separate NAEP State Report if and only if its weighted participation rate for the initial sample of public schools is greater than or equal to 70 percent.

## Guideline 2 - Publication of Nonpublic School Results:

A jurisdiction will have its nonpublic school results published in the NAEP 1998 Writing Report Card (or in other reports that include all state-level results) if and only if its weighted participation rate for the initial sample of nonpublic schools is greater than or equal to 70 percent and meets minimum sample size requirements. ${ }^{1} \mathrm{~A}$ jurisdiction eligible to receive a separate NAEP State Report under Guideline 1 will have its nonpublic school results included in that report if and only if that jurisdiction's weighted participation rate for the initial sample of nonpublic schools is greater than or equal to 70 percent and meets minimum sample size requirements. If a jurisdiction meets Guideline 2 but fails to meet Guideline 1 , a separate State Report will be produced containing only nonpublic school results.

Guideline 3 - Publication of Combined Public and Nonpublic School Results: A jurisdiction will have its combined results published in the NAEP 1998 Writing Report Card (or in other reports that include all state-level results) if and only if both Guidelines 1 and 2 are satisfied. Similarly, a jurisdiction eligible to receive a separate NAEP State Report under Guideline 1 will have its combined results included in that report if and only if Guideline 2 is also met.

Discussion: If a jurisdiction's public or nonpublic school participation rate for the initial sample of schools is below 70 percent, there is a substantial possibility that bias will be introduced into the assessment results. This possibility remains even after making statistical adjustments to compensate for school nonparticipation. There remains the likelihood that, in aggregate, the substitute schools are sufficiently dissimilar from the originals that they are replacing and represent too great a proportion of the population to discount such a difference. Similarly, the assumptions underlying the use of statistical adjustments to compensate for nonparticipation are likely to be significantly violated if the initial response rate falls below the 70 percent level. Guidelines 1,2 , and 3 take this into consideration. These guidelines are congruent with current NAGB policy, which requires that data for jurisdictions that do not have a 70 percent before-substitution participation rate be reported "in a different format," and with the Education Information Advisory Committee (EIAC) resolution, which calls for data from such jurisdictions not to be published.

[^27]The following guidelines concerning school and student participation rates in the NAEP state assessment program were established to address four significant ways in which nonresponse bias could be introduced into the jurisdiction sample estimates. Presented below are the conditions that will result in a jurisdiction's receiving a notation in the 1998 reports. Note that in order for a jurisdiction's results to be published with no notations, that jurisdiction must satisfy all guidelines.

## Guidelines for Notations 4 and 5: <br> Reporting school and student participation rates with possible bias due to school nonresponse

Guideline 4 - Notation for Overall Public School Participation Rate:
A jurisdiction that meets Guideline 1 will receive a notation if its weighted participation rate for the initial sample of public schools was below 85 percent and the weighted public school participation rate after substitution was below 90 percent.

Guideline 5 - Notation for Overall Nonpublic School Participation Rate: A jurisdiction that meets Guideline 2 will receive a notation if its weighted participation rate for the initial sample of nonpublic schools was below 85 percent and the weighted nonpublic school participation rate after substitution was below 90 percent.

Discussion: For jurisdictions that did not use substitute schools, the participation rates are based on participating schools from the original sample. In these situations, the NCES standards specify weighted school participation rates of at least 85 percent to guard against potential bias due to school nonresponse. Thus the first part of these guidelines, referring to the weighted school participation rate for the initial sample of schools, is in direct accordance with NCES standards.

To help ensure adequate sample representation for each jurisdiction participating in the NAEP 1998 state assessments, NAEP provided substitutes for nonparticipating public and nonpublic schools. For jurisdictions that used substitute schools, the assessment results will be based on the student data from all schools participating from both the original sample and the list of substitutes (unless both an initial school and its substitute eventually participated, in which case only the data from the initial school will be used).

The NCES standards do not explicitly address the use of substitute schools to replace initially selected schools that decide not to participate in the assessment. However, considerable technical consideration was given to this issue. Even though the characteristics of the substitute schools were matched as closely as possible to the characteristics of the initially selected schools, substitution does not entirely eliminate bias due to the nonparticipation of initially selected schools. Thus, for the weighted school participation rates including substitute schools, the guidelines were set at 90 percent.

If a jurisdiction meets either standard (i.e., 85 percent or higher prior to substitution or 90 percent or higher after substitution), there will be no notation for the relevant overall school participation rate.

## Guidelines for Notations 6 and 7:

Important segments of the jurisdiction's student population that must be adequately represented to avoid possible nonresponse bias

## Guideline 6 - Notation for Strata-Specific Public School Participation Rates:

A jurisdiction that is not already receiving a notation under Guideline 4 will receive a notation if the sample of public schools included a class of schools with similar characteristics that had a weighted participation rate (after substitution) of below 80 percent, and from which the nonparticipating schools together accounted for more than 5 percent of the jurisdiction's total weighted sample of public schools. The classes of schools from each of which a jurisdiction needed minimum school participation levels were determined by degree of urbanization, minority enrollment, and median household income of the area in which the school is located.
Guideline 7 - Notation for Strata-Specific Nonpublic School Participation Rates: A jurisdiction that is not already receiving a notation under Guideline 5 will receive a notation if the sample of nonpublic schools included a class of schools with similar characteristics that had a weighted participation rate (after substitution) of below 80 percent, and from which the nonparticipating schools together accounted for more than 5 percent of the jurisdiction's total weighted sample of nonpublic schools. The classes of schools from each of which a jurisdiction needed minimum school participation levels were determined by type of nonpublic school (Catholic versus non-Catholic) and location (metropolitan versus nonmetropolitan).

Discussion: The NCES standards specify that attention should be given to the representativeness of the sample coverage. Thus, if some important segment of the jurisdiction's population is not adequately represented, it is of concern, regardless of the overall participation rate.

If nonparticipating schools are concentrated within a particular class of schools, the potential for substantial bias remains, even if the overall level of school participation appears to be satisfactory. Nonresponse adjustment cells for public schools have been formed within each jurisdiction, and the schools within each cell are similar with respect to minority enrollment, degree of urbanization, and/or median household income, as appropriate for each jurisdiction. For nonpublic schools, nonresponse adjustment cells are determined by type and location of school.

If the weighted response rate, after substitution, for a single adjustment cell falls below 80 percent, and more than 5 percent (weighted) of the sampled schools are nonparticipants from such a cell, the potential for nonresponse bias is too great. These guidelines are based on the NCES standard for stratum-specific school response rates.

## Guidelines for Notations 8 and 9: Possible student nonresponse bias

## Guideline 8 - Notation for Overall Student Participation Rate in Public Schools:

A jurisdiction that meets Guideline 1 will receive a notation if the weighted student response rate within participating public schools was below 85 percent.

## Guideline 9 - Notation for Overall Student Participation Rate in Nonpublic Schools:

A jurisdiction that meets Guideline 2 will receive a notation if the weighted student response rate within participating nonpublic schools was below 85 percent.

Discussion: These guidelines follow the NCES standard of 85 percent for overall student participation rates. The weighted student participation rate is based on all eligible students from initially selected or substitute schools who participated in the assessment in either an initial session or a make-up session. If the rate falls below 85 percent, the potential for bias due to students' nonresponse is too great.

## Guidelines for Notations 10 and 11:

Possible nonresponse bias from inadequately represented strata

## Guideline 10 - Notation for Strata-Specific Student Participation Rates in Public Schools:

A jurisdiction that is not already receiving a notation under Guideline 8 will receive a notation if the sampled students within participating public schools included a class of students with similar characteristics that had a weighted student response rate of below 80 percent, and from which the nonresponding students together accounted for more than 5 percent of the jurisdiction's weighted assessable public school student sample. Student groups from which a jurisdiction needed minimum levels of participation were determined by the age of the student, whether or not the student was classified as a student with a disability (SD) or of limited English proficiency (LEP), and the type of assessment session (monitored or unmonitored), as well as school level of urbanization, minority enrollment, and median household income of the area in which the school is located.

## Guideline 11 - Notation for Strata-Specific Student Participation Rates in Nonpublic Schools:

A jurisdiction that is not already receiving a notation under Guideline 9 will receive a notation if the sampled students within participating nonpublic schools included a class of students with similar characteristics that had a weighted student response rate of below 80 percent, and from which the nonresponding students together accounted for more than 5 percent of the jurisdiction's weighted assessable nonpublic school student sample. Student groups from which a jurisdiction needed minimum levels of participation were determined by the age of the student, whether or not the student was classified as a student with a disability (SD) or of limited English proficiency (LEP), and the type of assessment session (monitored or unmonitored), as well as type and location of school.
Discussion: These guidelines address the fact that if nonparticipating students are concentrated within a particular class of students, the potential for substantial bias remains, even if the overall student participation level appears to be satisfactory. Student nonresponse adjustment cells have been formed using the school-level nonresponse adjustment cells, together with the student's age and the nature of the assessment session (unmonitored or monitored).

If the weighted response rate for a single adjustment cell falls below 80 percent, and more than 5 percent (weighted) of the invited students who do not participate in the assessment are from such a cell, the potential for nonresponse bias is too great. These guidelines are based on the NCES standard for stratum-specific student response rates.

## Students with Disabilities (SD) and Limited English Proficient (LEP) Students

It is NAEP's intent to assess all selected students from the target population. Therefore, every effort is made to ensure that all selected students who are capable of participating in the assessment are assessed. Some students sampled for participation in NAEP can be excluded from the sample according to carefully defined criteria. These criteria were revised in 1996 to more clearly communicate a presumption of inclusion except under special circumstances. According to these criteria, students with Individualized Education Programs (IEPs) were to be included in the NAEP assessment except in the following cases:

1. The school's IEP team determined that the student could not participate, OR,
2. The student's cognitive functioning was so severely impaired that she or he could not participate.

In cases where a student's IEP required that the student be tested with an accommodation or adaptation and stated that the student could not demonstrate his or her knowledge without that accommodation, the student was provided with the appropriate accommodation.

All LEP students receiving academic instruction in English for three years or more were to be included in the assessment. Those LEP students receiving instruction in English for less than three years were to be included unless school staff judged them as being incapable of participating in the assessment in English.

The reporting samples in the 1998 writing assessment used these criteria with provisions made for accommodations. Students with disabilities or with limited proficiency in English were included in the sample in the following way. At each grade one test booklet with two prompts was designated as the one to be administered to students requiring accommodations (it was also given to students not requiring accommodations). For each grade, those two prompts were chosen because they would not present any special problems for students with disabilities (for example, the prompts chosen did not include visual materials, given that visually impaired students would likely participate in the assessment). Students were given accommodations that matched as closely as possible those provided them in other testing situations by their schools or instructors (most frequently, extended time for responding). Those students who did not typically need accommodations for testing were not provided with them.

All the scale score and achievement level information in this report, then, is based on a student sample that includes students who were provided with accommodations. The responses of students assessed with accommodations were
evaluated according to the same criteria as those of students assessed without accommodations. Data on individual prompts are presented without including data on the performance of accommodated students, however. This exception was made because only a few prompts were presented to students given accommodations, and comparing those prompts to other prompts given without accommodations would not be appropriate.

Table A. 3 shows the number and percentage of students with disabilities and students with limited English proficiency included in the national sample for the NAEP 1998 writing assessment.

## Table A. 3

Students with disabilities and limited English proficient students
 in NAEP writing assessment, national sample (public and nonpublic schools combined): 1998

SOURCE: National Center for Education Statistics, National Assessment of Educational Progress (NAEP), 1998 Writing Assessment.

Participation rates for the students with disabilities and LEP samples are presented in Tables A.4a through A. 6 b . Tables A.4a and A.4b show the participation rates for SD and LEP students combined in public and nonpublic schools, respectively. These tables include as the denominator the total number of all students who were identified for the assessment, including assessed and excluded students. The columns then show the percentages of SD and LEP students who were identified for the assessment, with that percentage broken out by those excluded and those assessed. The percentage of SD and LEP students assessed is then further broken out into those assessed without accommodations and those assessed with accommodations. Tables A.5a and A. 5 b and A. 6 a and A. 6 b present the same information for SD students only and LEP students only, respectively.

Table A. 7 shows, for students with disabilities and for limited English proficient students who took the assessment, the numbers and percentages of students who were assessed with and without accommodations. The table further shows, for those students who were assessed with accommodations, the types of accommodations they received.

It should be noted that students assessed with accommodations typically received some combination of accommodations. For example, students assessed in small groups (as compared to standard NAEP sessions of about 30 students) usually received extended time and had directions and/or assessment questions read aloud as needed. In one-on-one administrations, students often received assistance in recording answers, had directions and questions read aloud, and were afforded extra time. Extended time was considered the primary accommodation only when it was the only accommodation provided.

Tables A.7a and A.7b present similar information to that in Table A.7. Those tables, however, show accommodations separately for students with disabilities and Limited English Proficient students.

## Data Collection

The 1998 writing assessment was conducted from January through March 1998, with some makeup sessions in early April. As with all NAEP assessments, data collection for the 1998 assessment was conducted by trained field staff. For the national assessment, this was accomplished by Westat, Inc., staff. In keeping with the legislative requirements of the state assessment program, personnel from each of the participating states conducted the state writing assessments. NAEP's responsibilities included selecting the sample of schools and students for each participating state, developing the administration procedures and manuals, training the personnel who would conduct the assessment, and conducting an extensive quality assurance program.

Each participating jurisdiction was asked to appoint a state coordinator to be the liaison between NAEP and participating schools. The state coordinator was asked to gain the cooperation of selected schools, assist in scheduling, provide information necessary for sampling, and notify personnel about training. At the local school level, the administrators - usually school or district staff - were responsible for attending training, identifying excluded students, distributing school and teacher questionnaires, notifying sampled students and their teachers, administering the assessment session, completing the necessary paperwork, and preparing the materials for shipment.

Westat staff trained assessment administrators within the states in three-and-one-half hour sessions that included videotaped and practice exercises to provide uniformity in procedures.

To provide quality control across states, a randomly selected 25 percent of the state assessment sessions were overseen by quality control monitors who were trained Westat staff. For nonpublic schools and for states that had not participated in the previous assessment, 50 percent of the sessions were monitored. The identity of the schools to be monitored was not revealed to state, district, or school personnel until shortly before the assessment was to commence. The analysis of the results for the unmonitored schools as compared to the monitored schools yielded no systematic differences that would suggest different procedures were used. See the forthcoming 1998 NAEP Technical Report for details and results of this analysis.

## Scoring

Materials from the NAEP 1998 writing assessment were shipped to National Computer Systems, where trained staff evaluated the responses to the writing prompts using scoring rubrics or guides prepared by Educational Testing Service (ETS). All the writing prompts were evaluated according to six-level scoring guides. At each grade, scoring guides were developed for each of the
three types of prompts: narrative, informative, and persuasive. Those guides are presented in Chapter 6.

Specialists in writing who are highly experienced in teaching and/or assessing writing trained the professional raters who evaluated the student responses. The trainers received intensive training together, including reading a manual that explained how to use the scoring guides and the processes for training and checking raters. For each prompt, the trainer, in consultation with other trainers or assessment specialists, chose numerous sample responses to present to raters and prepared notes on how the scoring guide applied to the particular prompt. The sample responses helped raters become accustomed to the variety of responses the prompt elicited before they began rating the student responses. Raters had to pass a qualifying test before they could evaluate student responses: they had to agree with at least 70 percent of the ratings given beforehand by their trainer to a set of ten student responses.

In order to determine interrater reliability of scoring, a specified percentage of responses was read twice: for the 25 -minute prompts, 25 percent of responses at grades 4 and 12 , and 10 percent of the responses at grade 8 (the only grade at which the state-by-state assessment was given) were read by two raters. In addition, 25 percent of responses to the 50 -minute prompts were read by a second rater.

For the national and state writing assessments, approximately 370,000 responses to writing prompts were scored. This number includes rescoring to monitor interrater reliability. The overall within-year percentages of exact agreement of ratings on the six-level scoring guides for the 1998 reliability samples were 77 percent at grade 4,71 percent at grade 8 , and 74 percent at grade 12. Adjacent agreement (no more than one point apart) was 99 percent at grades 4 and 8 and 98 percent at grade 12 .

## Data Analysis and IRT Scaling

Subsequent to the professional scoring, all information was transcribed to the NAEP database at ETS. Each processing activity was conducted with rigorous quality control. After the assessment information had been compiled in the database, the data were weighted according to the population structure. The weighting for the national and state samples reflected the probability of selection for each student as a result of the sampling design, adjusted for nonresponse. Through post-stratification, the weighting assured that the representation of certain subpopulations corresponded to figures from the U.S. Census and the Current Population Survey. ${ }^{2}$

Analyses were then conducted to determine the percentages of students who wrote responses to each writing prompt at each level on the scoring guide and who provided various responses to each background question. In calculating response percentages for each prompt, only students classified as having been presented the question were included in the denominator of the statistic. Students whose papers were blank or whose responses were judged off topic were similarly excluded from the calculation of the scale.

Item response theory (IRT) was used to estimate average writing scale scores for the nation, for various subgroups of interest within the nation, and for the states and territories. IRT models the probability of answering a question in a certain way as a mathematical function of proficiency. The main purpose of IRT analysis is to provide a common scale on which performance can be compared across groups such as those defined by characteristics including gender and race/ethnicity.

The results for 1998 are presented on the NAEP writing scales. In 1998, a scale ranging from 0 to 300 was created to report performance at each grade level. The scale summarizes student performance across all three purposes for writing (narrative, informative, and persuasive) in the assessment. The 50minute prompts were not included in the scale, because they were not considered comparable to the 25 -minute prompts. In addition, since each student who received a 50 -minute prompt received only one prompt, those prompts did not provide sufficient information about those students' writing to be put on the scale.

2 These procedures are described more fully in the section "Weighting and Variance Estimation," beginning on page 227 of the report. For additional information about the use of weighting procedures in NAEP, see Johnson, E.G. (1989, December). Considerations and techniques for analysis of NAEP data. Journal of Education Statistics, 14(4), 303-334.

In producing the writing scale, an IRT model was used. The writing prompts (all rated according to six-level scoring guides) were scaled by use of a generalized partial-credit (GPC) model. ${ }^{3}$ Developed by ETS and first used in 1992, the GPC model permits the scaling of questions scored according to multipoint rating schemes. The model takes full advantage of the information available from each of the student response categories that are used for more complex constructed-response questions such as writing prompts.

Because of the pBIB-spiraling design used by NAEP, students do not receive enough writing prompts to provide reliable information about individual performance. Traditional test scores for individual students, even those based on IRT, would lead to misleading estimates of population characteristics, such as subgroup means and percentages of students at or above a certain scale score level. Consequently, NAEP constructs sets of plausible values designed to represent the distribution of performance in the population. A plausible value for an individual is not a scale score for that individual but may be regarded as a representative value from the distribution of potential scale scores for all students in the population with similar characteristics and identical patterns of item response. Statistics describing performance on the NAEP writing scale are based on the plausible values. Under the assumptions of the scaling models, these population estimates will be consistent, in the sense that the estimates approach the model-based population values as the sample size increases, which would not be the case for population estimates obtained by aggregating optimal estimates of individual performance. ${ }^{4}$

[^28]
## Item Mapping Procedures

Item mapping is a procedure by which a rating on a writing prompt (such as "Sufficient" or better) is associated with a certain point on the 0 -to- 300 writing scale. The item maps for writing are presented at the end of Chapter 6. For example, the "Sufficient" rating for a given writing prompt will map onto the scale at 150 if students with an average scale score of at least 150 have a good chance of earning a rating of "Sufficient" or better. It is not clear-cut how to define "a good chance" in terms of the probability, expressed as a percentage, that a given student will respond to an item at the score level designated. A response-probability convention has to be adopted that will divide those students who have a higher probability of success from those who have a lower probability. Which response-probability convention is adopted largely determines where ratings on writing prompts will map onto the writing scale. A lower-boundary convention maps the ratings on writing prompts to lower points on the scale, and a higher-boundary convention maps the same ratings on prompts to higher points on the scale. The underlying distribution of writing skills in the population does not change, but the choice of a responseprobability convention does have an impact on the proportion of the student population that is reported as "able to do" the prompts on the writing scale.

There is no obvious choice of a point along the probability scale that is clearly superior to any other point. On one hand, if the convention were set with a boundary at 50 percent, those above the boundary would be more likely to score at a particular rating (or higher) on the prompt than not, while those below the boundary would be more likely to receive a lower rating. Although this convention has some intuitive appeal, it was rejected on the grounds that having a $50 / 50$ chance of getting a particular rating shows an insufficient degree of mastery. On the other hand, if the convention were set with a boundary at 80 percent, students above the criterion would have a high probability of receiving a given rating or higher. However, many students below this criterion may possess substantial writing ability that would be ignored by such a stringent criterion. In particular, those in the range between 50 and 80 percent likely to receive a particular rating or higher would be more likely to receive that rating than not, yet would not be in the group described as "able to achieve" that level of performance on the prompt.

In a compromise between the 50 percent and the 80 percent conventions, NAEP has adopted a response-probability convention of 65 percent for constructed-response questions such as writing prompts. This probability convention was established, in part, based on an intuitive judgment that it would provide the best picture of students' writing ability.

Some additional support for this convention was provided by Huynh. ${ }^{5} \mathrm{He}$ examined the IRT information provided by test items, according to the IRT model used in scaling NAEP questions. ("Information" is used here in a technical sense. See the forthcoming NAEP 1998 Technical Report for details.) Following Bock, ${ }^{6}$ Huynh decomposed the item information into that provided by a correct response $\left[\mathrm{P}(\theta)^{*} \mathrm{I}(\theta)\right]$ and that provided by an incorrect response $[(1-P(\theta)) * I(\theta)]$. Huynh showed that the item information provided by a correct response to a constructed-response item is maximized at the point along the writing scale at which the probability of a correct response is two-thirds. It should be noted, however, that maximizing the item information $I(\theta)$, rather than the information provided by a correct response $[\mathrm{P}(\theta) * \mathrm{I}(\theta)]$, would imply an item mapping criterion closer to 50 percent.

## Weighting and Variance Estimation

A complex sample design was used to select the students who were assessed. The properties of a sample selected through a complex design could be very different from those of a simple random sample, in which every student in the target population has an equal chance of selection and in which the observations from different sampled students can be considered to be statistically independent of one another. Therefore, the properties of the sample for the complex data collection design were taken into account during the analysis of the assessment data.

One way that the properties of the sample design were addressed was by using sampling weights to account for the fact that the probabilities of selection were not identical for all students. All population and subpopulation characteristics based on the assessment data used sampling weights in their estimation. These weights included adjustments for school and student nonresponse.

Not only must appropriate estimates of population characteristics be derived, but appropriate measures of the degree of uncertainty must be obtained for those statistics. Two components of uncertainty are accounted for in the variability of statistics based on student ability: (1) the uncertainty due to sampling only a relatively small number of students, and (2) the uncertainty due to sampling only a relatively small number of cognitive questions (in this case, writing prompts). The first component accounts for the variability associated with the estimated percentages of students who had certain background characteristics or who had a certain rating for their responses to a prompt.

[^29]Because NAEP uses complex sampling procedures, conventional formulas for estimating sampling variability that assume simple random sampling are inappropriate. NAEP uses a jackknife replication procedure to estimate standard errors. The jackknife standard error provides a reasonable measure of uncertainty for any student information that can be observed without error. However, because each student typically responds to only two writing prompts, the scale score for any single student would be imprecise. In this case, plausible values methodology can be used to describe the performance of groups and subgroups of students, but the underlying imprecision involved in this step adds another component of variability to statistics based on NAEP scale scores. ${ }^{7}$ (Appendix B provides the standard errors for the results presented in this report.)

Typically, when the standard error is based on a small number of students or when the group of students is enrolled in a small number of schools, the amount of uncertainty associated with the standard errors may be quite large. Throughout this report, estimates of standard errors subject to a large degree of uncertainty are followed by the "!" symbol. In such cases, the standard errors - and any confidence intervals or significance tests involving these standard errors - should be interpreted cautiously. Additional details concerning procedures for identifying such standard errors are discussed in the forthcoming NAEP 1998 Technical Report.

The reader is reminded that, like findings from all surveys, NAEP results are subject to other kinds of error, including the effects of imperfect adjustment for student and school nonresponse and unknowable effects associated with the particular instrumentation and data collection methods. Nonsampling errors can be attributed to a number of sources - inability to obtain complete information about all selected schools in the sample (some students or schools refused to participate, or students participated but answered only certain questions); ambiguous definitions; differences in interpreting questions; inability or unwillingness to give correct information; mistakes in recording, coding, or scoring data; and other errors in collecting, processing, sampling, and estimating missing data. The extent of nonsampling error is difficult to estimate and, because of their nature, the impact of such errors cannot be reflected in the data-based estimates of uncertainty provided in NAEP reports.

[^30]
## Drawing Inferences from the Results

Because the percentages of students in these subpopulations and their average scale scores are based on samples rather than on the entire population of fourth, eighth, or twelfth graders in the nation or a jurisdiction, the numbers reported are estimates. As such, they are subject to a measure of uncertainty, reflected in the standard error of the estimate. When the percentages or average scale scores of certain groups are compared, the standard error should be taken into account, and observed similarities or differences should not be relied on solely. Therefore, the comparisons discussed in this report are based on statistical tests that consider the standard errors of those statistics and the magnitude of the difference among the averages or percentages.

Using confidence intervals based on the standard errors provides a way to take into account the uncertainty associated with sample estimates and to make inferences about the population averages and percentages in a manner that reflects that uncertainty. An estimated sample average scale score plus or minus two standard errors approximates a 95 percent confidence interval for the corresponding population quantity. This statement means that one can conclude with approximately a 95 percent level of confidence that the average performance of the entire population of interest (e.g., all eighth-grade students in public schools in a jurisdiction) is within plus or minus two standard errors of the sample average.

As an example, suppose that the average writing scale score of the students in a particular group was 162 , with a standard error of 1.2 . A 95 percent confidence interval for the population quantity would be as follows:

Average $\pm 2$ standard errors

$$
162 \pm 231.2
$$

$$
162 \pm 2.4
$$

(159.6, 164.4)

Thus, one can conclude with a 95 percent level of confidence that the average scale score for the entire population of students in that group is between 159.6 and 164.4 .

Similar confidence intervals can be constructed for percentages, if the percentages are not extremely large or extremely small. Extreme percentages should be interpreted with caution. Adding or subtracting the standard errors associated with extreme percentages could cause the confidence interval to exceed 100 percent or go below 0 percent, resulting in numbers that are not meaningful. (The forthcoming NAEP 1998 Technical Report contains a more complete discussion of extreme percentages.)

## Analyzing Group Differences in Averages and Percentages

The statistical tests determine whether the evidence, based on the data from the groups in the sample, is strong enough to conclude that the averages or percentages are actually different for those groups in the population. If the evidence is strong (i.e., the difference is statistically significant), the report describes the group averages or percentages as being different (e.g., one group performed higher than or lower than another group), regardless of whether the sample averages or percentages appear to be approximately the same.

The reader is cautioned to rely on the results of the statistical tests rather than on the apparent magnitude of the difference between sample averages or percentages when determining whether the sample differences are likely to represent actual differences among the groups in the population.

To determine whether a real difference exists between the average scale scores (or percentages of a certain attribute) for two groups in the population, one needs to obtain an estimate of the degree of uncertainty associated with the difference between the averages (or percentages) of these groups for the sample. This estimate of the degree of uncertainty, called the standard error of the difference between the groups, is obtained by taking the square of each group's standard error, summing the squared standard errors, and taking the square root of that sum.

$$
\text { Standard Error of the Difference }=\mathrm{SE}_{\mathrm{A}-\mathrm{B}}=\sqrt{\left(\mathrm{SE}_{\mathrm{A}}^{2}+\mathrm{SE}_{\mathrm{B}}{ }^{2}\right)}
$$

Similar confidence intervals can be constructed for percentages, provided that the percentages are not extremely large or extremely small. For percentages, significance tests work best when sample sizes are large, and the percentages being tested have magnitude relatively close to 50 percent. Statements about group differences should be interpreted with caution if at least one of the groups being compared is small in size and/or if "extreme" percentages are being compared. Percentages, $P$, were treated as "extreme" if: $P<P_{\text {lim }}=\frac{200}{N_{E F F}+2}$, where the effective sample size is $N_{E F F}=\frac{P(100-P)}{\left(S E_{j k}\right)^{2}}$, and $S E_{j k}$ is the jackknife standard error of $P$.

This "rule of thumb" cutoff leads to flagging a large proportion of statistical tests that would otherwise be significant. Similarly, at the other end of the $0-100$ scale, a percentage is deemed extreme if $100-P<P_{l i m}$. When a percentage is flagged as extreme, the percentage is reported but no standard error is estimated and no significance test is conducted.

In this case, the value of $P$ was reported, but no standard error was estimated and hence no tests were conducted.

As an example of comparing groups, consider the problem of determining whether the average writing scale score of Group A is higher that that of Group B. Suppose that the sample estimates of the average scale scores and standard errors were as follows:

| Group | Average scale score |  |
| :---: | :---: | :---: |
| A | 137 | 0.9 |
| B | 135 | 1.1 |

The difference between the estimates of the average scale scores of Groups $A$ and $B$ is two points $(137-135)$. The standard error of this difference is

$$
\sqrt{\left(0.9^{2}+1.1^{2}\right)}=1.4 .
$$

Thus, an approximate 95 percent confidence interval for this difference is plus or minus two standard errors of the difference

$$
\begin{gathered}
2 \pm 2 \times 1.4 \\
2 \pm 2.8 \\
(-0.8,4.8) .
\end{gathered}
$$

The value zero is within the confidence interval; therefore, there is insufficient evidence to claim that Group A outperformed Group B.

In some cases, the differences between groups were not discussed in this report. This happened for one of two reasons: (a) if the comparison involved an extreme percentage (as defined above); or (b) if the standard error for either group was subject to a large degree of uncertainty (i.e., the coefficient of variation is greater than 20 percent, denoted by "!" in the tables). ${ }^{8}$ In either case, the results of any statistical test involving that group needs to be interpreted with caution, and so the results of such tests are not discussed in this report.

[^31]
## Estimating Degrees of Freedom for Significance Tests

Among the major findings reported for NAEP assessments are mean differences between groups - for example, comparisons of public and private school students. Such comparisons are assessed for statistical significance by a t-test of the form:

$$
\frac{\left|m_{i}-m_{j}\right|}{\sqrt{S_{m_{i}}^{2}+S_{m_{j}}^{2}}}
$$

Where:
$m_{i}$ and $m_{j}$ are the means for groups $i$ and $j$, and $S_{m i}^{2}$ and $S^{2}{ }_{m j}$ are the jackknife estimates of sampling variance for groups $i$ and $j$. For a two-tailed test, this statistic is assessed at a nominal alpha level of $.05 / 2 \mathrm{c}$, where $\mathrm{c}>1$ for multiple comparisons.

The degrees of freedom of this t -test are estimated by an approximation given by Johnson and Rust ${ }^{9}$ as follows:

$$
d f=\frac{\sum_{k=1}^{N}\left(S_{m_{k}}^{2}\right)^{2}}{\sum_{k=1}^{N}\left(\frac{S_{m_{k}}^{4}}{d f_{k}}\right)}
$$

where the summation is over the two groups being compared. The item, $\mathrm{df}_{\mathrm{k}}$, is the degree of freedom estimate for the variance of the mean $\mathrm{m}_{\mathrm{k}}$ and is defined by Satterthwaite ${ }^{10}$ with a correction term suggested by Johnson and Rust. It is derived by matching estimates of the first two moments of the variance to those of a chi-square random variable.

$$
d f_{k}=\left(3.16-\frac{2.77}{\sqrt{L}}\right) \frac{\left(\sum_{j=1}^{L}\left(m_{j k}-m_{k}\right)^{2}\right)^{2}}{\sum_{j=1}^{L}\left(m_{j k}-m_{k}\right)^{4}}
$$

Here, j stands for jackknife replicate j , and the summations are overall replicates, usually 62 in NAEP. The $m_{j k}$ term is the mean of subgroup $k$ for the jth jackknife replicate. The term $\mathrm{m}_{\mathrm{k}}$ is the overall mean for subgroup k , using the overall weights and the first plausible value.

[^32]The number of degrees of freedom for the variance equals the number of independent pieces of information used to generate the variance. In the case of data from NAEP, the pieces of information are the 62 squared differences $\left(m_{\mathrm{jk}}-\mathrm{m}_{\mathrm{k}}\right)^{2}$, each supplying, at most, one degree of freedom (regardless of how many individuals were sampled within PSUs). If some of the squared differences $\left(m_{j k}-m_{k}\right)^{2}$ are much larger than others, the variance estimate of $m_{k}$ is predominantly estimating the sum of these larger components, which dominate the remaining terms. The effective degrees of freedom of $S^{2}{ }_{m k}$ in this case will be nearer to the number of dominant terms. The estimate, $\mathrm{df}_{\mathrm{k}}$, reflects these relationships.

The two formulae above show that when $\mathrm{df}_{\mathrm{k}}$ is small, the degrees of freedom for the t-test, df, will also be small. This will tend to be the case when only a few PSU pairs have information about subgroup differences relevant to a $t$-test. It will also be the case when a few PSU pairs have subgroup differences much larger than other PSU pairs.

## Conducting Multiple Tests

The procedures described in this section and the certainty ascribed to intervals (e.g., a 95 percent confidence interval) are based on statistical theory that assumes that only one confidence interval or test of statistical significance is being performed. However, in Chapter 2 and Chapter 3 of this report, many different groups are being compared (i.e., multiple sets of confidence intervals are being analyzed). In sets of confidence intervals, statistical theory indicates that the certainty associated with the entire set of intervals is less than that attributable to each individual comparison from the set. To hold the significance level for the set of comparisons at a particular level (e.g., .05), adjustments (called "multiple comparison procedures" ${ }^{11}$ ) must be made to the methods described in the previous section. One such procedure, the False Discovery Rate (FDR) procedure, ${ }^{12}$ was used to control the certainty level.

[^33]Unlike the other multiple comparison procedures (e.g., the Bonferroni procedure) that control the familywise error rate (i.e., the probability of making even one false rejection in the set of comparisons), the FDR procedure controls the expected proportion of falsely rejected hypotheses. Furthermore, familywise procedures are considered conservative for large families of comparisons. ${ }^{13}$ Therefore, the FDR procedure is more suitable for multiple comparisons in NAEP than other procedures. A detailed description of the FDR procedure appears in the forthcoming NAEP 1998 Technical Report.

The 1998 assessment is the first time NAEP has used the BenjaminiHochberg procedure to maintain FDR for all multiple comparisons. Prior to the 1996 assessment, the Bonferroni procedure was used for multiple comparisons.

## NAEP Reporting Groups

In this report, results are provided for groups of students defined by shared characteristics - region of the country, gender, race or ethnicity, parental education, school's type of location, eligibility for the Free/Reduced-Price School Lunch program, and type of school. Based on participation rate criteria, results are reported for subpopulations only when sufficient numbers of students and adequate school representation are present. For public school students, the minimum requirement is at least 62 students in a particular subgroup from at least 5 primary sampling units (PSUs). ${ }^{13}$ For nonpublic school students, the minimum requirement is 62 students from at least 6 different schools for the state assessment program or from at least 5 PSUs for the national assessment. However, the data for all students, regardless of whether their subgroup was reported separately, were included in computing overall results. Definitions of the subpopulations referred to in this report are presented below.

[^34]
## Region

Results are reported for four regions of the nation: Northeast, Southeast, Central, and West. Figure A.l shows how states are divided among these regions. All 50 states and the District of Columbia are listed. Territories and the two Department of Defense Educational Activities jurisdictions are not assigned to any region.

Regional results are based on national assessment samples, not on aggregated state assessment program samples. Thus, the regional results are based on a sample that is different and separate from that used to report the state results.

## Figure A. 1

States included in the four NAEP regions

| Northeast | Southeast | Central | West |
| :--- | :--- | :--- | :--- |
|  | Alabama | Illinois | Alaska |
| Connecticut | Arkansas | Indiana | Arizona |
| Delaware | lowa | California |  |
| District of Columbia | Florida | Kansas | Colorado |
| Maine | Georgia | Kana | Mentucky |
| Maryland | Michigan | Hawaii |  |
| Massachusetts | Louisiana | Minnesota | Idaho |
| New Hampshire | Mississippi | Missouri | Montana |
| New Jersey | North Carolina | Nebraska | Nevada |
| New York | South Carolina | North Dakota | New Mexico |
| Pennsylvania | Tennessee | Ohio | Oklahoma |
| Rhode Island | *Virginia | South Dakota | Oregon |
| Vermont | West Virginia | Wisconsin | Texas |
| *Virginia |  |  | Utah |
|  |  |  | Washington |
|  |  |  | Wyoming |
|  |  |  |  |

[^35]
## Gender

Results are reported separately for males and females.

## Race/Ethnicity

The race/ethnicity variable is derived from two questions asked of students and from school records, and it is used for race/ethnicity subgroup comparisons.
Two questions from the set of general student background questions were used to determine race/ethnicity:

If you are Hispanic, what is your Hispanic background?

- I am not Hispanic.
- Mexican, Mexican American, or Chicano
- Puerto Rican
$\square$ Cuban
$\square$ Other Spanish or Hispanic background
Students who responded to this question by filling in the second, third, fourth, or fifth oval were considered Hispanic. For students who filled in the first oval, did not respond to the question, or provided information that was illegible or could not be classified, responses to the following question were examined to determine their race/ethnicity.

Which best describes you?
$\square$ White (not Hispanic)

- Black (not Hispanic)
- Hispanic ("Hispanic" means someone who is Mexican, Mexican American, Chicano, Puerto Rican, Cuban, or from some other Spanish or Hispanic background.)
$\square$ Asian or Pacific Islander ("Asian or Pacific Islander" means someone who is Chinese, Japanese, Korean, Filipino, Vietnamese, Asian American, or from some other Asian or Pacific Island background.)
- American Indian or Alaskan Native ("American Indian or Alaskan Native" means someone who is from one of the American Indian tribes, or one of the original people of Alaska.)
$\square$ Other (specify) $\qquad$

Students' race/ethnicity was then assigned on the basis of their responses. For students who filled in the sixth oval ("Other"), provided illegible information or information that could not be classified, or did not respond at all, race/ethnicity was assigned as determined by school records.

An exception in this definition of race/ethnicity was made for Hawaii (i.e., students in Hawaii in the state assessment). Students from Hawaii who specified Asian or Pacific Islander in response to the question "Which best describes you?" were categorized in the Asian or Pacific Islander race/ethnicity classification, no matter what response they gave to the question, "If you are Hispanic, what is your Hispanic background?"

Race/ethnicity could not be determined for students who did not respond to either of the demographic questions and whose schools did not provide information about race/ethnicity.

Details of how race/ethnicity classifications were derived are presented so that readers can determine how useful the results are for their particular purposes. Also, some students indicated that they were from a Hispanic background (e.g., Puerto Rican or Cuban) and that a racial/ethnic category other than Hispanic best described them. These students were classified as Hispanic based on the rules described above. Furthermore, information from the schools did not always correspond to how students described themselves. Therefore, the racial/ethnic results presented in this report attempt to provide a clear picture based on several sources of information.

In the NAEP 1998 writing assessment, the mutually exclusive racial/ethnic categories were: White, Black, Hispanic, Asian/Pacific Islander, and American Indian (including Alaskan Native).

## Parents' Highest Level of Education

For students at all three grades, the variable representing the level of parental education is derived from responses to six questions from the set of general student background questions. Students were asked to indicate the extent of their mother's education with the following three questions.

Did your mother graduate from high school? ("Mother" can be a mother, stepmother, or female guardian.)

- Yes
$\square$ No
- I don't know.

Did your mother have some education after high school? ("Mother" can be a mother, stepmother, or female guardian.)
$\square$ Yes
$\square$ No

- I don't know.

Did your mother graduate from college? ("Mother" can be a mother, stepmother, or female guardian.)
$\square$ Yes
$\square$ No

- I don't know.

Students were asked the same three questions about their father's education level, as shown below.

Did your father graduate from high school? ("Father" can be a father, stepfather, or male guardian.)
$\square$ Yes
$\square \mathrm{No}$

- I don't know.

Did your father have some education after high school? ("Father" can be a father, stepfather, or male guardian.)
$\square$ Yes
Jo
I I don't know.
Did your father graduate from college? ("Father" can be a father, stepfather, or male guardian.)Yes
$\square$ No
I don't know.
The information was combined into one parental education reporting variable determined through the following process. If a student indicated the extent of education for only one parent, that level was included in the data. If a student indicated the extent of education for both parents, the higher of the two levels was included in the data. If a student did not know the level of education for both parents, or did not know the level for one parent and did not respond for the other, the parental education level was classified as "I don't know." If the student did not respond for either parent, the student was recorded as having provided no response. Nationally, 11 percent of fourth graders, 3 percent of eighth graders, and 1 percent of twelfth graders reported that they did not know the education level of either of their parents. Because these parental education questions were revised for 1998, the relation between self-reported levels of parental education and performance on the NAEP 1998 writing assessment may differ from that seen in past NAEP assessments in writing and other subjects.

## Type of Location

Results are reported for students attending schools in three mutually exclusive location types: central city, urban fringe/large town, and rural/small town.

Central City: This category includes central cities of all Standard Metropolitan Statistical Areas (SMSA) as defined by the Office of Management and Budget. Central City is a geographical term and is not synonymous with "inner city."

Urban Fringe/Large Town: The urban fringe category includes all densely settled places and areas within SMSA's that are classified as urban by the Bureau of the Census, but which do not qualify as Central City. A Large Town is defined as a place outside a SMSA with a population greater than or equal to 25,000.

Rural/Small Town: Rural includes all places and areas with populations of less than 2,500 that are classified as rural by the Bureau of the Census. A Small Town is defined as a place outside a SMSA with a population of less than 25,000 , but greater than or equal to 2,500 .

## Eligibility for the Free/Reduced-Price School Lunch Program

Based on available school records, students were classified as either currently eligible for the Free/Reduced-Price School Lunch component of the Department of Agriculture's National School Lunch Program or not eligible. Students whose family income is at or below 130 percent of the poverty level are eligible for free lunches. Students whose family income is up to 185 percent of the poverty level are eligible for reduced-price lunches. The classification applies only to the school year when the assessment was administered (i.e., the 1997-98 school year) and is not based on eligibility in previous years. If school records were not available, the student was classified as "Information not available." If the school did not participate in the program, all students in that school were classified as "Information not available."

## Type of School

Results are reported by the type of school that the student attends - public or nonpublic. Nonpublic schools include Catholic and other private schools. Although Bureau of Indian Affairs (BIA) schools and Department of Defense Domestic Dependent Elementary and Secondary Schools (DDESS) are not included in either the public or nonpublic categories, they are included in the overall national results. (A separate sample for DDESS was included as a jurisdiction in the state assessment.)

## Cautions in Interpretations

As described earlier, the NAEP writing scale makes it possible to examine relationships between students' performance and various background factors measured by NAEP. However, the fact that a relation exists between achievement and a particular background factor does not mean that the factor caused the higher or lower achievement. Many other factors may be influencing the achievement. Similarly, the assessments do not capture the influence of unmeasured variables. The results are most useful when they are considered in combination with other knowledge about the student population and the educational system, such as trends in instruction, changes in the school-age population, and societal demands and expectations.

## Grade 12 Participation Rates and Motivation

NAEP has been described as a "low-stakes" assessment. That is, students receive no individual scores, and their NAEP performance has no effect on their grades, promotions, or graduation. There has been continued concern that this lack of consequences affects participation rates of students and schools, as well as the motivation of students to perform well on NAEP. Of particular concern has been the performance of twelfth graders, who typically have lower student participation rates than fourth and eighth graders and who are more likely to omit responses compared to the younger cohorts.

## Participation Rates

In NAEP, there has been a consistent pattern of lower participation rates for older students. Here we are making a comparison to participation rates in NAEP in 1992 (the last time the NAEP writing assessment was administered), when students were classified by both grade and age level. In the 1992 NAEP assessments, for example, the student participation rates were 93 percent and 89 percent at grades 4 (age 9 ) and 8 (age 13), respectively. At the twelfth grade (age 17), however, the participation rate was 81 percent. School participation rates (the percentage of sampled schools that participated in the assessment) have also typically decreased with increasing grade level. Again citing the 1992 assessments, the school participation rate was 86 percent for the fourth grade (age 9), 85 percent for the eighth grade (age 13), and 82 percent for the twelfth grade (age 17).

The effect of participation rates on student performance, however, is unclear. Students may choose not to participate in NAEP for many reasons, such as a desire to attend regular classes so as not to miss important instruction or fear of not doing well on NAEP. Similarly, there are a variety of reasons for
which various schools do not participate. The sampling weights and nonresponse adjustments, described earlier in this appendix, provide an approximate statistical adjustment for nonparticipation. However, the effect of some school and student nonparticipation may have some undetermined effect on results.

## Motivation

To the extent that students in the NAEP sample are not trying their hardest, NAEP results may underestimate student performance. The concern increases as students get older and is particularly pronounced for twelfth graders. The students themselves furnish some evidence about their motivation. As part of the background questions, students were asked how important it was to do well on the NAEP writing assessment. They were asked to indicate whether it was very important, important, somewhat important, or not very important to them. The percentage of students indicating they thought it was either important or very important to do well was 90 percent for fourth graders, 61 percent for eighth graders, and 37 percent for twelfth graders.

Several factors may contribute to this pattern. NAEP was administered in the late winter, when high school seniors often have other things on their minds. Another factor that may have contributed to lack of motivation is the fact that the writing assessment consists of constructed-response questions (in this case, writing prompts), which tend to be more time-consuming than multiple-choice questions. As with participation rates, however, the combined effect of these and other factors is unknown.

It is also interesting to note that students who indicated it was very important for them to do well on NAEP did not have the highest average scores. In fact, at grade 12, students who reported it was not very important to do well had higher average scores than those who reported it was very important to do well. These data further cloud the relationship between motivation and performance on NAEP.

## Need for Future Research

More research is needed to delineate the factors that contribute to nonparticipation and lack of motivation. To that end, NCES plans to commission a study of high school transcripts to learn more about the academic performance of twelfth-grade students who do not participate in the assessment. In addition, NCES is currently investigating how various types of incentives can be effectively used to increase participation in NAEP.

## APPENDIX B

## Standard Errors

The comparisons presented in this report are based on statistical tests that consider the magnitude of the difference between group averages or percentages and the standard errors of those statistics. This appendix contains the standard errors for the estimated averages and percentages in all the tables and figures throughout this report. Because NAEP scores and percentages are based on samples rather than the entire population(s), the results are subject to a measure of uncertainty reflected in the standard errors of the estimates. It can be said with 95 percent certainty that for each population of interest, the value for the whole population is within plus or minus two standard errors of the estimate for the sample.

## APPENDIX D

## State-Level Contextual Variables

To help better place results from the NAEP 1998 state assessment program into context, this appendix presents selected state-level data from sources other than NAEP. These data are taken from the Digest of Education Statistics 1997.

## Table D.1a

School system characteristics from non-NAEP sources

|  | Estimated total and school-age resident population: 1997 (estimates as of July 1) ${ }^{1}$ |  | Enrollment in public elementary and secondary schools: Fall 1996² |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | Total, all ages (in thousands) | 5- to 17-year-olds (in thousands) | Total | Kindergarten through grade 8 | Grades 9 to 12 |
| Nation States | 267,636 | 50,378 | 45,592,213 | 32,758,548 | 12,833,665 |

## APPENDIX E

## Additional State-Level Achievement Results for Subgroups

This chapter shows more complete state-by-state achievement level results for selected student subgroups to supplement the information in Chapter 5. It shows percentages below the Basic achievement level, at or above Basic, at or above Proficient, and at Advanced for those subgroups. This information is for public schools only. Appendix F presents overall state-by-state results for nonpublic schools.

## Table E. 1

Percentage of grade 8 students at or above achievement levels by gender for public schools only: 1998

|  | Male |  |  |  | Female |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

## APPENDIX F

## State-Level Results for Nonpublic Schools

This appendix presents state-by-state results for students in nonpublic schools. It includes both scale score and achievement level data. Nonpublic school results are reported only for those states with sufficient numbers of participating nonpublic schools.

## Table F .1

Average grade 8 scale scores for the states for nonpublic schools only: 1998

|  | Average scile score |
| :---: | :---: |
| Nation <br> States | 167 (1.2) |

## ACKNOWLEDGMENTS

This report is a product of the many individuals who contributed their considerable knowledge, experience, and creativity to the NAEP 1998 writing assessment. The NAEP writing assessment was a collaborative effort among staff from the National Center for Education Statistics (NCES) in the U.S. Department of Education, the National Assessment Governing Board (NAGB), Educational Testing Service (ETS), Westat, and National Computer Systems (NCS).

In addition, the program benefited from the contributions of hundreds of individuals at the state and local levels - governors, chief state school officers, state and district test directors, state coordinators, and district administrators - who tirelessly provided their wisdom, experience, and hard work. Most importantly, NAEP is grateful to the thousands of students and hundreds of teachers and administrators who made the assessment possible.

The NAEP 1998 writing assessment was funded through NCES, in the Office of Educational Research and Improvement of the U.S. Department of Education. The Commissioner of Education Statistics, Pascal D. Forgione, the Acting Commissioner, Gary W. Phillips, and the NCES staff - Peggy Carr, Arnold Goldstein, Andy Kolstad, Marilyn McMillen, Suzanne Triplett, Maureen Treacy, and Sheida White - worked closely and collegially with the authors to produce this report. The authors were also provided invaluable advice and guidance by the members of the NAGB staff.

The NAEP project at ETS is directed by Stephen Lazer and John Mazzeo. Sampling and data collection activities were conducted by Westat under the direction of Rene Slobasky, Nancy Caldwell, Keith Rust, and Dianne Walsh. Printing, distribution, scoring, and processing activities were conducted by NCS under the direction of Brad Thayer, Patrick Bourgeacq, Charles Brungardt, Mathilde Kennel, Linda Reynolds, and Connie Smith.

The complex statistical and psychometric activities necessary to report results for the NAEP 1998 writing assessment were directed by Nancy Allen, John Barone, James Carlson, and Frank Jenkins. The analyses presented in this report were led by Bruce Kaplan with assistance from Dave Freund, Gerry Kokolis, Venus Leung, Youn-Hee Lim, Ting Lu, and Kate Pashley.

The design and production of the report were overseen by Loretta Casalaina and Rod Rudder. Kelly Gibson designed the cover. Loretta Casalaina led the considerable production efforts with assistance from Barbette Tardugno, Kelly Gibson, Tracey Creely, and Sharon Davis-Johnson. Data checking was done by Tracey Creely, Alice Kass, Katonya Davis, and Barbette Tardugno. Editorial assistance was provided by Karlene Farquharson, Eleanor Werenfels, Christine Liddie, Shari Santapau, and Nancy Horkay, under the leadership of Shari Santapau. Karen McQuillen provided research assistance.

Many thanks are due to the numerous reviewers, both internal and external to NCES and ETS, who reviewed this publication. The comments and critical feedback of the following reviewers are reflected in the final version of this report: Arthur Applebee, Mary Lyn Bourque, Suzanne Clewell, Lawrence Feinberg, Arnold Goldstein, Kerry Gruber, Alyce Hunter, Andy Kolstad, Marilyn McMillen, and Shi-Chang Wu.

[^23]:    ${ }^{1}$ Throughout this chapter, the term jurisdiction is used to refer to the states, territories, and Department of Defense Education Activity schools that participated in the 1998 NAEP state-by-state assessment.
    ${ }^{2}$ NAEP writing state reports are published on the World Wide Web at http://nces.ed.gov/nationsreportcard

[^24]:    ${ }^{3}$ The significance tests used in these figures are based on the False Discovery Rate (FDR) procedure for multiple comparisons. This procedure takes into account all possible combinations between states in declaring the differences between any two states to be statistically significant. (For further details on the FDR procedure, see Appendix A.)

[^25]:    Those with scores below this mapping point should not necessarily be considered unable to write "Skillful" responses to these prompts. The prompts are not mapped at the point that provides equal confidence that those above that point can do what the prompt requires while those below cannot. Details on the procedures used to develop item maps will be provided in the forthcoming NAEP 1998 Technical Report.

[^26]:    NOTE: Each grade 12 writing prompt was mapped onto the NAEP 0-to-300 writing scale. The map shows, for each level on the scoring guide from 2 ("Insufficient") through 6 ("Excellent"), the scale score attained by students who had a 65 percent probability of attaining that level on the scoring guide or higher. Only selected prompts are presented.
