What is
The Nation's
Report Card ${ }^{\text {mw }}$ ?

The Nation's Report Card ${ }^{\text {TM }}$ informs the public about the academic achievement of elementary and secondary students in the United States. Report cards communicate the findings of the National Assessment of Educational Progress (NAEP), a continuing and nationally representative measure of achievement in various subjects over time.
For over three decades, NAEP assessments have been conducted periodically in reading, mathematics, science, writing, U.S. history, civics, geography, and other subjects. By collecting and reporting information on student performance at the national, state, and local levels, NAEP is an integral part of our nation's evaluation of the condition and progress of education. Only information related to academic achievement and relevant variables is collected. The privacy of individual students and their families is protected, and the identities of participating schools are not released.
NAEP is a congressionally authorized project of the National Center for Education Statistics (NCES) within the Institute of Education Sciences of the U.S. Department of Education. The Commissioner of Education Statistics is responsible for carrying out the NAEP project. The National Assessment Governing Board oversees and sets policy for NAEP.

## Executive Summary

Reading skills are improving for both fourth- and eighth-graders, particularly among lower- and middle-performing students. Many student groups made gains in both grades; however, these gains were not always accompanied by significant closing of racial/ethnic and gender gaps.

Students demonstrated their reading comprehension skills by responding to questions about various types of reading passages on the 2007 National Assessment of Educational Progress (NAEP) reading assessment. Reading abilities were assessed in the contexts of literary experience, gaining information, and performing a task.

A nationally representative sample of more than 350,000 students at grades 4 and 8 participated in the 2007 reading assessment. Comparing these results to results from previous years shows the progress fourth- and eighth-graders are making both in the nation and in individual states.

Fourth-graders scored higher in 2007 than in all the previous assessment years. The average reading score was up 2 points since 2005 and 4 points compared to the first assessment 15 years ago. Higher percentages of students were performing at or above the Basic and Proficient achievement levels in 2007 than in previous years.

The average reading score for eighth-graders was up 1 point since 2005 and 3 points since 1992; however, the trend of increasing scores was not consistent over all assessment years. In comparison to both 1992 and 2005, the percentage of students performing at or above the Basic level increased, but there was no significant change in the percentage of students at or above the Proficient level.

## White, Black, and Hispanic students in both grades make gains

As indicated on the chart below, White, Black, and Hispanic students all scored higher in 2007 than in the first assessment 15 years ago at both grades 4 and 8 . However, improvements for minority students did not always result in the narrowing of the achievement gaps with White students. Only the White - Black gap at grade 4 was smaller in comparison to the gaps in 2005 and 1992.

## Female students outperform males

Patterns in improvement for male and female students varied by grade. Scores for both male and female students increased since 2005 at grade 4, but not at grade 8. In 2007, female students scored 7 points higher than male students at grade 4 and 10 points higher at grade 8 . These gender score gaps were not significantly different from the gaps seen 15 years ago.

|  | Grade 4 |  | Grade 8 |  |
| :--- | :---: | :---: | :---: | :---: |
| Student groups | Since 1992 | Since 2005 | Since 1992 | Since 2005 |

[^0]
## FOUR STATES AND JURISDICTIONS MAKE GAINS IN READING AT BOTH GRADES

${ }^{1}$ Department of Defense Education Activity (overseas and domestic schools).

Compared with 2005,

- 4 states and jurisdictions (District of Columbia, Florida, Hawaii, and Maryland) improved at both grades,

13 states and Department of Defense schools improved at grade 4 only,
2 states improved at grade 8 only,
2 states declined at grade 8, and
30 states showed no significant change at either grade.
Differing patterns emerged when results were examined by the contexts for reading. For example, 5 of the 44 states and jurisdictions that showed no change in overall performance at grade 8 did show a gain in at least one of the three reading contexts.

# Overview of the Reading Assessment 

#### Abstract

As the key that allows access to many forms of knowledge and information, reading literacy is a skill critical to learning. The NAEP reading assessment measures reading comprehension by asking students to read passages and answer questions about what they have read. In this way, it collects valuable information on the progress of literacy and provides a broad picture of what our nation's students are able to read and understand at specific grade levels.

## The Reading Framework

The NAEP reading framework serves as the blueprint for the assessment, specifying what should be assessed. Developed under the direction of the National Assessment Governing Board, the framework reflects ideas from a variety of organizations involved in reading education, including reading experts, school administrators, policymakers, teachers, parents, and others.

The current NAEP reading framework was first used to guide the development of the 1992 assessment and has continued to be used through 2007. Updates to the framework over the years have provided more detail regarding the assessment design but did not change the content, allowing students' performance in 2007 to be compared with previous years. For more information on the framework, see http://www.nagb.org/frameworks/ reading_07.pdf.

The framework provides a broad definition of reading that includes developing a general understanding of written texts, interpreting texts, and using texts for different purposes. In addition, it views reading as an interactive and dynamic process involving the reader, the text, and the context of the reading experience.

Recognizing that readers vary in their approach to reading according to the demands of any particular text, the framework specifies that reading performance be measured in two dimensions: reading contexts and aspects of reading. Three contexts for reading provide guidance for the types of texts included in the assessment. Four aspects of reading provide guidance for the types of questions that are asked about the texts.

## CONTEXTS FOR READING

Reading for literary experience includes exploring events, characters, themes, settings, plots, actions, and the language of literary works by reading novels, short stories, poems, plays, legends, biographies, myths, and folktales.

Reading for information involves reading materials such as magazines, newspapers, textbooks, essays, and speeches in order to better understand the world.

Reading to perform a task requires readers to apply what they learn from reading materials such as bus or train schedules, directions for repairs or games, classroom procedures, maps, and so on.

## Assessment Design

Because of the large number of questions and the variety of texts included in the NAEP reading assessment, each student took just a portion of the test, consisting of two 25 -minute sections or one 50 -minute section. Each section contained a reading passage and a set of related questions. The passages used in the assessment reflect those typically available to students, such as collections of stories, children's magazines, or informational books. Students were asked to respond to both multiple-choice and constructed-response (i.e., open-ended) questions.

Each question in the NAEP reading assessment measured one of the aspects of reading within the broader context for reading. All three contexts for reading are assessed at grade 8 , but only two-reading for literary experience and reading for information-are assessed at grade 4. At both grades, the framework recommends that the assessment time for each aspect of reading be distributed as shown in table 1.

## ASPECTS OF READING

Forming a general understanding involves considering the text as a whole and having an overall understanding of it.
Developing interpretation requires extending initial impressions and linking information across parts of the text, as well as focusing on specific information.
Making reader/text connections includes linking information in the text with knowledge and experience and applying ideas to the real world.

Examining content and structure involves understanding and critically evaluating text content, features, or appropriateness.

Table 1. Target percentage of assessment time in NAEP reading, by grade and aspect of reading: 2007

| Aspects of reading | Grade 4 | Grade 8 |
| :--- | :---: | :---: |
| Forming a general <br> understanding/ <br> Developing interpretation | $60 \%$ | $55 \%$ |
| Making reader/text <br> connections | $15 \%$ | $15 \%$ |
| Examining content and <br> structure | $25 \%$ | $30 \%$ |

${ }^{1}$ For the purpose of distribution by assessment time, forming a general understanding and developing interpretation were combined as per the specifications for the assessment.
SOURCE: U.S. Department of Education, National Assessment Governing Board, Reading Framework for the 2007 National Assessment of Educational Progress, 2006. feature, or appropiateres.

## Reporting NAEP Results

> The students selected to take the NAEP assessment represent all fourth- and eighth-grade students across the U.S. Students who participate in NAEP play an important role by demonstrating the achievement of our nation's students and representing the success of our schooling. NAEP data can only be obtained with the cooperation of schools, teachers, and students nationwide.

Representative samples of schools and students at grades 4 and 8 participated in the 2007 NAEP reading assessment (table 2). The national results reflect the performance of all fourth- and eighth-graders in public schools, private schools, Bureau of Indian Education schools, and Department of Defense schools. The state results reflect the performance of students in public schools only.

Table 2. Number of participating schools and students in NAEP reading assessment, by grade: 2007

| Grade | Schools | Students |
| :---: | :---: | :---: |
| Grade 4 | 7,830 | 191,000 |
| Grade 8 | 6,930 | 160,700 |

NOTE: The numbers of schools are rounded to the nearest ten, and the numbers of students are rounded to the nearest hundred.
SOURCE: U.S. Department of Education, Institute of Education Sciences, National Center for Education Statistics, National Assessment of Educational Progress (NAEP), 2007 Reading Assessment.

At grade 4, national results from the 2007 reading assessment are compared to results from seven previous assessment years. The 2007 national results for grade 8 are compared to results from six previous assessments, as the 2000 assessment was administered at grade 4 only. The 2007 state results are compared to results from six earlier assessments at grade 4 and four earlier assessments at grade 8 .

Changes in students' performance over time are summarized by comparing the results in 2007 to those in the next most recent assessment and first assessment, except when pointing out consistent patterns in results across all assessments.

## Scale Scores

NAEP reading results are reported on a $0-500$ scale. Because NAEP scales are developed independently for each subject, average scores cannot be compared across subjects even when the scale has the same range.

In addition to reporting an overall reading score for each grade, scores are reported at five percentiles (10th, 25th, 50th, 75th, and 90th) to show trends in performance for lower-, middle-, and higher-performing students. Scores are also reported for two contexts for reading at grade 4 and three contexts at grade 8. Here again, the scales were set separately for each context for reading; therefore, direct comparisons cannot be made from one to another.

## Achievement Levels

Based on recommendations from policymakers, educators, and members of the general public, the Governing Board sets specific achievement levels for each subject area and grade. Achievement levels are performance standards showing what students should know and be able to do. They provide another perspective with which to interpret

## NAEP ACHIEVEMENT LEVELS

Basic denotes partial mastery of prerequisite knowledge and skills that are fundamental for proficient work at a given grade.

Proficient represents solid academic performance. Students reaching this level have demonstrated competency over challenging subject matter.

Advanced represents superior performance.
student performance. NAEP results are reported as percentages of students performing at or above the Basic and Proficient levels and at the Advanced level.

As provided by law, NCES, upon review of congressionally mandated evaluations of NAEP, has determined that achievement levels are to be used on a trial basis and should be interpreted with caution. The NAEP achievement levels have been widely used by national and state officials.

## Item Maps

Item maps provide another way to interpret the scale scores and achievement-level results for each grade. The item maps displayed in each grade section of this report show student performance on NAEP reading questions at different points on the scale.

## Accommodations and Exclusions in NAEP

Testing accommodations, such as extra testing time or individual rather than group administration, are provided for students with disabilities or English language learners who could not fairly and accurately demonstrate their abilities without modified test administration procedures. Prior to 1998, no testing accommodations were provided in the NAEP reading assessment. This resulted in the exclusion of some students. In 1998, administration procedures were introduced allowing certain accommodations for students requiring such accommodations` to participate.

Note that most figures in this report show two data points in 1998-one permitting and the other not permitting accommodations. Both 1998 data points are presented in this report, but comparisons between 1998 and 2007 are based on accommodated samples.

Even with the availability of accommodations, there still remains a portion of students excluded from the NAEP assessment. Variations in exclusion and accommodation rates, due to differences in policies and practices regarding the identification and inclusion of students with disabilities and English language learners, should be considered when comparing students' performance over time and across states. While the effect of exclusion is not precisely known, comparisons of performance results could be affected if exclusion rates are comparatively high or vary widely over time. See appendix tables A-1 through A-5 for the percentages of students accommodated and excluded at the national and state levels. More information about NAEP's
policy on inclusion of special-needs students is available at http://nces.ed.gov/nationsreportcard/about/inclusion.asp.

## Interpreting Results

Changes in performance results over time may reflect not only changes in students' knowledge and skills but also other factors, such as changes in student demographics, education programs and policies (including policies on accommodations and exclusions), and teacher qualifications.

NAEP results adopt widely accepted statistical standards; findings are reported based on a statistical significance level set at .05 with appropriate adjustments for multiple comparisons. In the tables and figures of this report that present results over time, the symbol $\left({ }^{*}\right)$ is used to indicate that a score or percentage in a previous assessment year is significantly different from the comparable measure in 2007. This symbol is also used in tables to highlight differences between male and female students within 2007. As a result of larger student sample sizes beginning in 2002, smaller differences (e.g., 1 or 2 points) can be found statistically significant than would have been detected with the smaller sample sizes used in earlier assessments.

Score differences or gaps cited in this report are calculated based on differences between unrounded numbers. Therefore, the reader may find that the score difference cited in the text may not be identical to the difference obtained from subtracting the rounded values shown in the accompanying tables or figures.

Not all of the data for results discussed in this report are presented in corresponding tables or figures. These and other results can be found in the NAEP Data Explorer at http://nces.ed.gov/nationsreportcard/nde.

For additional information, visit http://nationsreportcard.gov.

## 4th Grade

## Fourth-graders reading at higher levels

Fourth-graders' reading comprehension skills have risen compared to 15 years ago. As shown in figure 1, the average score of 221 in 2007 was higher than in any of the previous assessment years. Fourth-graders in 2007 scored 2 points higher than in 2005 and 4 points higher than in 1992.

Figure 1. Trend in fourth-grade NAEP reading average scores

* Significantly different ( $p<.05$ ) from 2007.

SOURCE: U.S. Department of Education, Institute of Education Sciences, National Center for Education Statistics, National Assessment of Educational Progress (NAEP), various years, 1992-2007 Reading Assessments.

## Gains in reading contexts

Although not shown here, gains were also made in each of the two reading contexts assessed at grade 4. The score in reading for literary experience increased from 219 in 1992 to 223 in 2007. The score in reading for information increased from 214 in 1992 to 219 in 2007.

## Improvement for lower- and middle-performing students

Figure 2. Trend in fourth-grade NAEP reading percentile scores

Higher reading scores were seen particularly among lower- and middle-performing students (at the 10 th, 25 th, and 50 th percentiles). The score at each of these percentiles was higher in 2007 than in all previous assessments (figure 2). While the score in 2007 for students at the 75th percentile was higher than in both 2005 and 1992, the score for students at the 90th percentile showed no significant change in comparison to 2005 but was higher than in 1992.

* Significantly different ( $p<.05$ ) from 2007.

The performance increases were reflected in higher percentages of students performing at or above the Basic level and the Proficient level.

The percentage of fourth-graders performing at or above Basic increased from 62 percent in 1992 to 67 percent in 2007 (figure 3). The percentage at or above Proficient increased from 29 to 33 percent over the same period.

Figure 3. Trend in fourth-grade NAEP reading achievement-level performance

* Significantly different ( $p<.05$ ) from 2007. SOURCE: U.S. Department of Education, Institute of Education Sciences, National Center for Education Statistics, National Assessment of Educational Progress (NAEP), various years, 1992-2007 Reading Assessments.

\% at Advanced
\% at or above Proficient \% at or above Basic

[^1] not permitted

Accommodations permitted

## Most racial/ethnic groups show improvement

Figure 4. Trend in fourth-grade NAEP reading average scores, by race/ethnicity

Reading performance improved for four of the five racial/ ethnic groups over the last 15 years. White, Black, Hispanic, and Asian/Pacific Islander students all showed higher average reading scores in comparison to 2005 and 1992 (figure 4). Since 1992, Black and Asian/Pacific Islander students made greater gains (increases of 11 and 16 points, respectively) than White students (a gain of 6 points ${ }^{1}$ ).

There was no significant change in the average reading score for American Indian/Alaska Native students compared to all previous assessment years for which data were available.
${ }^{1}$ The score-point gain is based on the difference of the unrounded scores as opposed to the rounded scores shown in the figure.

## ACHIEVEMENT-LEVEL RESULTS...

Information is available on achievement-level results for racial/ethnic groups and other reporting categories at http://nationsreportcard.gov/reading_2007/data.asp.

* Significantly different ( $p<.05$ ) from 2007.

NOTE: Sample sizes were insufficient to permit reliable estimates for American Indian/Alaska Native fourth-graders in 1992 and 1998. Black includes African American, Hispanic includes Latino, and Pacific Islander includes Native Hawaiian. Race categories exclude Hispanic origin. SOURCE: U.S. Department of Education, Institute of Education Sciences, National Center for Education Statistics, National Assessment of Educational Progress (NAEP), various years, 19922007 Reading Assessments.

## White - Black score gap narrows

The increase in the score for Black fourth-graders contributed to the narrowing of the score gap with their White peers. While there was a 27-point gap between White and Black students in 2007, the gap was smaller than in all previous assessments (figure 5).

The 26-point score gap between White and Hispanic students in 2007 was not significantly different from the gaps in 2005 or 1992.

Figure 5. Trend in fourth-grade NAEP reading average scores and score gaps, by selected racial/ethnic groups

* Significantly different ( $p<.05$ ) from 2007.

NOTE: Black includes African American, and Hispanic includes Latino. Race categories exclude Hispanic origin. Score gaps are calculated based on differences between unrounded average scores.

Table 3. Percentage of students assessed in fourth-grade NAEP reading, by race/ethnicity: Various years, 1992-2007

| Race/ethnicity | 1992 | 1994 | 1998 | 2000 | 2002 | 2003 | 2005 | 2007 |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| White | $73^{*}$ | $72^{*}$ | $66^{*}$ | $63^{*}$ | $61^{*}$ | $60^{*}$ | 59 | 58 |
| Black | 17 | 17 | 15 | 17 | $17^{*}$ | 17 | 16 | 16 |
| Hispanic | $7^{*}$ | $7^{*}$ | $14^{*}$ | $14^{*}$ | $16^{*}$ | $17^{*}$ | 18 | 19 |
| Asian/Pacific <br> Islander | $2^{*}$ | $3^{*}$ | 4 | 4 | $4^{*}$ | $4^{*}$ | 5 | 5 |
| American Indian/ <br> Alaska Native | 1 | 1 | 1 | 1 | 1 | 1 | 1 | 1 |

In each assessment year, NAEP collects information on student demographics. As shown in table 3, there have been no significant changes since 2005 in the percentages of students in any of the five racial/ethnic groups. In comparison to 1992, the percentage of White students in the population has declined, while the percentages of Hispanic and Asian/Pacific Islander students have increased.

NOTE: Black includes African American, Hispanic includes Latino, and Pacific Islander includes Native Hawaiian. Race categories exclude Hispanic origin. Detail may not sum to totals because results are not shown for the "unclassified" race/ethnicity category.
SOURCE: U.S. Department of Education, Institute of Education Sciences, National Center for Education Statistics, National Assessment of Educational Progress (NAEP), various years, 1992-2007 Reading Assessments.

## Females outperform males

The overall improvement in reading at grade 4 was seen in the performance of both male and female students. Reading scores were higher in 2007 than in all previous assessment years for both groups (figure 6).

In 2007, female fourth-graders scored higher on average in reading than their male counterparts. The 7-point score gap between the two groups was not significantly different from the gaps in 2005 or in 1992.

Figure 6. Trend in fourth-grade NAEP reading average scores and score gaps, by gender

* Significantly different ( $p<.05$ ) from 2007.

NOTE: Score gaps are calculated based on differences between unrounded average scores.

Table 4. Average scores in fourth-grade NAEP reading, by reading context and gender: 2007

| Gender | Reading for literary experience | Reading for information |
| :--- | :---: | :---: |
| Male | $219^{*}$ | $216^{*}$ |
| Female | 227 | 221 |

* Significantly different ( $p<.05$ ) from female students in 2007.

SOURCE: U.S. Department of Education, Institute of Education Sciences, National Center for Education Statistics, National Assessment of Educational Progress (NAEP), various years, 1992-2007 Reading Assessments.

Average reading scores remained higher for female students than for male students when results were examined by each context for reading. Female students scored 8 points higher in reading for literary experience and 5 points higher in reading for information (table 4).

## Public school students score lower than private school students

Ninety percent of fourth-graders attended public schools in 2007, and 10 percent attended private schools. The average reading score for fourth-graders in public schools (220) was lower than for students in private schools overall (234) and lower than for students in Catholic schools specifically (232).
Sample sizes for private schools as a whole were not always large enough to produce reliable estimates of student performance in some of the previous assessments,
limiting the comparisons that can be made in performance over time (see the section on School and Student Participation Rates in the Technical Notes for more information). Trend results for public and Catholic school students, and for private school students in those years in which sample sizes were sufficient, are available at: http:// nationsreportcard.gov/reading_ 2007/r0038.asp.

## Both higher- and lower-income level students make gains

A student's eligibility for free or reduced-price school lunch is used as an indicator of socioeconomic status; students from low-income families are typically eligible (eligibility criteria are described in the Technical Notes), while students from higher-income families typically are not.

Students who were not eligible continued to score higher on average
than students who were eligible for free or reduced-price lunch; however, average reading scores were higher in 2007 than in 2005 for all three groups (figure 7). When comparing the performance of the two eligible groups in 2007, those students eligible for reduced-price lunch scored higher on average than students eligible for free lunch.

Figure 7. Trend in fourth-grade NAEP reading average scores, by eligibility for free or reduced-price school lunch

Table 5. Percentage of students assessed in fourth-grade NAEP reading, by eligibility for free or reduced-price school lunch: 2003, 2005, and 2007

| Eligibility status | 2003 | 2005 | 2007 |
| :--- | :---: | :---: | :---: |
| Eligible for free lunch | $32^{*}$ | 34 | 35 |
| Eligible for reduced-price lunch | $8^{*}$ | $7^{*}$ | 6 |
| Not eligible | $50^{*}$ | $50^{*}$ | 52 |
| Information not available | $10^{*}$ | $8^{*}$ | 7 |

More than one-third of fourth-graders assessed were eligible for free lunch in 2007 (table 5).

Changes in these percentages may reflect not only a shift in the population but also changes in the National School Lunch Program and improvements in data quality. See the Technical Notes for more information.

## State Performance at Grade 4

State results for public school students make it possible to compare each state's performance to other states and to the nation. All 50 states and 2 jurisdictions (i.e., the District of Columbia and Department of Defense schools) participated in the 2007 reading assessment. These 52 states and jurisdictions are all referred to as "states" in the following summary of state results. All states also participated in 2005, and 42 participated in the 1992 assessment, allowing for comparisons over time.

## Scores increase since 2005 in one-third of states

The map on the right highlights the 18 states that showed an increase in their overall average reading score from 2005 to 2007 (figure 8). Of these 18 states, scores also increased for White students in 6 states, Black students in 8 states, and Hispanic students in 2 states. Scores increased for all three racial/ethnic student groups in New Jersey.
In no state did scores decline since 2005 for public school students overall or for any of the racial/ethnic student groups.

When making state comparisons, it is important to remember that performance results may be affected by differences in demographic makeup and exclusion and
accommodation rates for students with disabilities and English language learners. Differences in performance could be affected if exclusion rates are comparatively
high or vary widely over time. See appendix tables A-3 through A-5 for state exclusion and accommodation rates.

Figure 8. Changes in fourth-grade NAEP reading average scores between 2005 and 2007

[^2]
## Scores higher than in 1992 for 25 states

Of the 42 states that participated in both the 1992 and 2007 assessments, 25 showed increases in average scores, and 1 state showed a decrease (figure 9). Twenty-one of the 25 states with score increases also showed increased percentages of students performing at or above Basic and at or above Proficient. These and other state results for grade 4 are provided in figure 10, tables 6 and 7, and appendix tables A-7 through A-13.

Figure 9. Changes in fourth-grade NAEP reading average scores between 1992 and 2007

SOURCE: U.S. Department of Education, Institute of Education Sciences, National Center for Education Statistics, National Assessment of Educational Progress (NAEP), 1992 and 2007 Reading Assessments.

## States' progress varies by context for reading

All of the texts used to measure reading comprehension at grade 4 are classified within the framework dimension of context for reading: reading for literary experience and reading for information. Reading for literary experience is measured with fictional texts that include stories and folktales. Reading for information is measured with articles from children's magazines or from textbooks.

Nationally, students improved their performance overall and in both reading contexts from 2005 to 2007. States' overall performance was not always consistent with their performance in each reading context. Some states improved overall and in both reading contexts. Others did not improve in their overall performance, but did improve in one of the reading contexts. Even states that experienced an overall decline in reading performance may not have declined in both reading contexts.

When compared to 2005...
... 6 of the 18 states that posted overall gains also showed gains in both reading contexts. They were Alabama, the District of Columbia, Florida, Iowa, Massachusetts, and New Jersey. Twelve states showed gains in either reading for information or reading for literary experience but not both.
... 9 of the 34 states that showed no significant change in overall performance showed gains in reading for information. None of these 34 states improved in reading for literary experience.

Reading Assessment.

## Assessment Content at Grade 4

The content of the assessment varied by grade to reflect the reading skills appropriate for each grade level, with differing proportions of assessment questions devoted to each of the contexts for reading. At grade 4, assessment questions were divided between two of the contexts for reading: reading for literary experience and reading for information, with a slightly higher proportion of assessment questions devoted to reading for literary experience. The 2007 fourth-grade reading assessment included a total of 10 reading passages and 100 questions.

## Reading Achievement Levels at Grade 4

The following descriptions are abbreviated versions of the full achievement-level descriptions for grade 4 reading. The cut score depicting the lowest score representative of that level is noted in parentheses.

Basic (208): Fourth-grade students performing at the Basic level should demonstrate an understanding of the overall meaning of what they read. When reading text appropriate for fourth-graders, they should be able to make relatively obvious connections between the text and their own experiences and extend the ideas in the text by making simple inferences.

Proficient (238): Fourth-grade students performing at the Proficient level should be able to demonstrate an overall understanding of the text, providing inferential as well as literal information. When reading text appropriate to fourth grade, they should be able to extend the ideas
in the text by making inferences, drawing conclusions, and making connections to their own experiences. The connections between the text and what the student infers should be clear.

Advanced (268): Fourth-grade students performing at the Advanced level should be able to generalize about topics in the reading selection and demonstrate an awareness of how authors compose and use literary devices. When reading text appropriate to fourth grade, they should be able to judge texts critically and, in general, give thorough answers that indicate careful thought.

## What Fourth-Graders Know and Can Do in Reading

The item map below is useful for understanding performance at different levels on the scale. The scale scores on the left represent the average scores for students who were likely to get the items correct or complete. The lower-boundary scores at each achievement level are noted in boxes. The descriptions of selected assessment questions are listed in the right column and indicate what students needed to do to answer the question successfully. For
example, the map on this page shows that fourth-graders performing near the middle of the Basic range (students with an average score of 220) were likely to be able to recognize the meaning of specialized vocabulary from context. Students performing near the lower end of the Proficient range (with an average score of 239) were likely to be able to identify a character's problem and describe how it was solved.

GRADE 4 NAEP READING ITEM MAP

|  | Scale score | Question description |
| :---: | :---: | :---: |
|  | 500 |  |
|  | $\sim$ |  |
|  | 347 | Integrate text ideas to provide and explain their application |
|  | 326 | Evaluate titles and support judgment about them |
| ® | 324 | Provide text-based inference and support with story details |
| \% | 302 | Explain causal relation between character's action and story outcome |
| $\frac{3}{8}$ | 290 | Read across text to provide a sequence of specific information |
|  | 290 | Describe change in story character and explain cause |
|  | 284 | Use dialogue or action to provide inference about character trait |
|  | 277 | Recognize author's purpose for including information |
|  | 268 | Provide causal relation between text ideas |
|  | 268 |  |
|  | 265 | Connect relevant text ideas to provide an explanation |
|  | 264 | Extend text information to provide an opinion |
| \% | 257 | Recognize the main purpose of an article |
| U000 | 250 | Use local story context to recognize meaning of a word (shown on page 24) |
| \% | 242 | Retrieve relevant information to fit description |
|  | 239 | Identify character's problem and describe how it was solved |
|  | 238 | Recognize the main message of a story |
|  | 238 |  |
|  | 237 | Use story details to infer and describe character's feelings |
|  | 236 | Use character trait to make a comparison |
|  | 231 | Recognize fact supported by text information |
| \% | 226 | Recognize paraphrase of explicitly stated supporting example |
|  | 220 | Recognize meaning of specialized vocabulary from context |
|  | 216 | Recognize support for interpretation of character |
|  | 209 | Recognize literal information from text |
|  | 208 |  |
|  | 205 | Make simple inference to recognize relationship of picture to text |
|  | 203 | Recognize the main topic of an article |
|  | 200 | Provide text-based explanation of character's importance to story |
|  | 193 | Recognize character's motivation for central story action |
|  | 189 | Recognize important lesson based on story theme |
|  | 158 | Use explicitly stated information to provide character motivation (shown on page 25) |
|  | ${ }_{0}$ |  |

## Sample Reading Passage

The short story below is an example of what a fourth-grader might read for literary experience. The story centers around one main character and how her actions over the course of a single day bring about a change in her situation. The two sample questions that follow were based on this reading passage.

## DISHPAN DUCKS

## By Margaret Springer

## Illustrated by Don Dyen

Rosa walked home from school slowly. The rows of apartment buildings and the streets full of cars looked all the same. And it was cold.

Rosa missed her country. She had begun to learn some English, but she did not know what to say or what to do when other kids were around. They were friendly, but Rosa felt safer being alone.

Behind Rosa's brick apartment building was a special place, a small creek where Rosa always stopped after school. There were ducks there, and she could speak to them in her language. The ducks seemed to understand.

Every afternoon Rosa sat on a concrete slab above the creek and watched the ducks until Mama came home from work.

Rosa did not feed them. She knew that most "people food" was not right for ducks. But she watched them swim and feed and walk up to her, quacking. Once they even walked over Rosa's tummy as she lay with her feet stretched out on the bumpy grass. They like me, Rosa said to herself.

One day after school, the ducks were not in the water. They did not waddle toward Rosa, even though she stayed very still. Something was wrong.

Gently, Rosa tiptoed to where the ducks were huddled. "Are you sick?" she whispered. They looked different. They looked greasy.

Then Rosa noticed the creek. An oily film covered it, making patches of color on the water's surface. She looked closely at the ducks. Their feathers were stuck together. They could not swim. They could not fly.

I must get help, said Rosa to herself. But how? I don't know anyone. Mama told me not to speak to strangers. Besides, I don't know how to ask in English.

Rosa had an idea. She rushed back to the street, walked to the traffic light, then raced around the corner and back to the school yard.

Rosa was in luck. Boys and girls were still there, practicing baseball with the gym teacher. Rosa had never played baseball in this country.
"Please! Come!" said Rosa, breathless, "Ducks!"
"Hello, Rosa," said the teacher. "What's the trouble?"
"Ducks!" said Rosa again. It was one of the few English words she was sure of. "Come.

## Please. Ducks!"

She pointed in the direction of the creek. The kids were staring at her, but she didn't care.
"Ducks!" she said again, her eyes pleading.
The teacher said something in English to his team. They looked at Rosa and taked all at once Then the teacher smiled. "OK, Rosa," he said. "Show us." They all grabbed their jackets and their baseball mitts and bats, and followed Rosa to the creek.

Pretty soon there were more people at Rosa's creek than she had ever seen there before. First the police came with their squad cars and sirens. Then came the firefighters with their big trucks and Humane Society workers in their vans.

People came out from the apartment building with dishpans and towels and liquid dish detergent. Rosa did not understand all the talk, but she knew what was happening.

The ducks were too weak to fly or run away. She and the other kids rounded them up and held m in the dishpans while the Humane Society people worked. Four washes for each duck with mild detergent, and four rinses with clear water. It reminded Rosa of doing the wash.

After a while someone brought a blow-dryer. Rosa laughed as the ducks were blown fluffy-dry. After one, they were packed carefully into cages in the Humane Society vans. oils in their feathers, so they can keep themselves warm and swim properly. A big factory ness! You spilled four hundred gallons of diesel fuel into the storm sewers last night. What a mess! You got to these ducks just in time, young lady."

Rosa did not know what the man was saying, but she saw how everyone smiled at her, and she felt proud.

By the time Rosa's mama came home, the cars and the vans and the people were gone. Rosa was in her special place by the creek. But she was not alone. She was playing baseball with three friends. Rosa was good at baseball. She was getting better at English, too.
"Home run!" she shouted, laughing, after she slugged the ball almost to the parking lot. Rosa was happy. And the dishpan ducks were safe.

## Sample Question About Vocabulary in Context

This sample question asked fourth-graders to use their understanding of a part of the story to identify the meaning of a word. The meaning of the word is related to a major event in the story. This question was classified under the reading aspect, developing interpretation.

Fifty-two percent of fourth-graders selected the correct answer (choice B), demonstrating their understanding that the main character knows only a few English words and so uses her eyes to ask for help with the emergency. Of the incorrect answers, choices C and D , which are ordinary functions of the eyes, were selected by 41 percent of fourth-graders.

## Percentage of fourth-grade students in each response category in 2007

|  |  |  |  |  |
| ---: | ---: | ---: | ---: | ---: |
| Choice A | Choice B | Choice C | Choice D | Omitted |
| 7 | 52 | 21 | 20 | 1 |
| NOTE: Detail may not sum to totals because of rounding. |  |  |  |  |

NOTE: Detail may not sum to totals because of rounding.

The table below shows the percentage of fourthgraders within each achievement level who answered the question correctly. For example, 76 percent of fourthgraders performing at the Proficient level understood the meaning of the word.

Percentage correct for fourth-grade students at each achievement level in 2007

| Overall | Below Basic | At Basic | At Proficient | At Advanced |
| ---: | ---: | ---: | ---: | ---: |
| 52 | 23 | 51 | 76 | 92 |

[^5] Statistics, National Assessment of Educational Progress (NAEP), 2007 Reading Assessment.

## What does the word "pleading" mean, as it is used in the sentence below? <br> "Ducks," she said again, her eyes pleading.

Looking
Blinking

## Sample Question About Character Motivation

This sample question asked students to demonstrate their understanding of the main character by providing the motivation for an action at a particular point in the story. In addition, students needed to support their answer with details from the story. This question was classified under the reading aspect, developing interpretation.

Student responses for this question were rated using the following three-level scoring guide:

Full comprehension-These responses use details from the story to explain why Rosa visits the ducks at the beginning of the story.

Partial or surface comprehension-These responses demonstrate a general understanding of why Rosa visits the ducks at the beginning of the story but do not support it with details from the story. Or, responses may provide a story detail related to Rosa visiting the ducks but are unrelated to why she visits them.

Little or no comprehension-These responses provide inappropriate information or personal opinions that are not related to why Rosa visits the ducks at the beginning of the story.

Missing responses were considered intentional omissions.

The first student response on the right was rated as "Full comprehension" because it provided both a reason why Rosa visits the ducks-"because she feels safer"-and supports it with details related to why she feels safer with the ducks. Fifty-four percent of fourth-graders provided a response rated as "Full comprehension." The second response was rated as "Partial" because it provides a story detail related to Rosa visiting the ducks at the beginning of the story. Thirty-four percent of fourthgraders provided a response rated as "Partial."

> Explain why Rosa visits the ducks at the beginning of the story. Use details from the story in your answer.

Response rated as "Full comprehension" Rosa goes because she feels safer
alone so she goes to the creek. She
feels better because she could
talk to the ducks in her language
and they understand her.

Response rated as "Partial comprehension" smon nutis. the deche geceve she fied then and hen mone wollin't be hace.

## Percentage of fourth-grade students in each response category in 2007

| $\begin{array}{r} \text { Full } \\ \text { comprehension } \end{array}$ | Partial or surface comprenension | $\begin{aligned} & \text { Little or no } \\ & \text { comprehension } \end{aligned}$ | Omited |
| :---: | :---: | :---: | :---: |
| 54 | 34 | 11 | 1 |

NOTE: Detail may not sum to totals because a small percentage of responses that did not address the assessment task are not shown.

The table below shows the percentage of fourth-graders within each achievement level whose answer to the question above was rated as "Full comprehension." For example, 56 percent of fourth-graders performing at the Basic level were able both to provide a reason and support it with details to demonstrate full comprehension.

## Percentage rated as "Full comprehension" for fourth-grade students at each achievement level in 2007

## 8th Grade

## Lower- and middle-performing students score higher than in 2005

Figure 12. Trend in eighth-grade NAEP reading percentile scores

* Significantly different ( $p<.05$ ) from 2007. The score for the 50th percentile was lower in 2005 (264.51) than in 2007 (265.36).

Overall gains were seen for lowerand middle-performing students. Scores for eighth-graders at the 10 th, 25th, and 50th percentiles were higher in 2007 than in 2005 and 1992, while there was no significant change in the scores for students at the 75th and 90th percentiles in comparison to either 2005 or 1992 (figure 12).

NAEP achievement-level results also reflected gains for lower- and middleperforming students. The percentage of students performing at or above the Basic level increased from 73 percent in 2005 to 74 percent in 2007 and was higher in 2007 than in 1992 (figure 13). There was no significant change in the percentage of students performing at or above Proficient in comparison to either 2005 or 1992.

Figure 13. Trend in eighth-grade NAEP reading achievement-level performance

* Significantly different ( $p<.05$ ) from 2007. The percentage at Advanced was higher in 2003 (3.16) than in 2007 (2.77). ## Gains for White, Black, and Hispanic students

Figure 14. Trend in eighth-grade NAEP reading average scores, by race/ethnicity

[^6]The overall gains for eighth-graders were not consistent across all racial/ethnic groups. Scores for White and Black students in 2007 were higher than in both 2005 and 1992 (figure 14). The score for Hispanic students has not changed significantly in comparison to 2005 , but was higher than in 1992. Over the last 15 years, scores for Asian/Pacific Islander and American Indian/Alaska Native students showed no significant change in comparison to all previous assessment years in which results were available.

Although not shown here, the increase since 1992 for White students was seen mostly in the scores for lower- and middle-performing students (those at the 10th, 25th, and 50th percentiles), while the increase over the same period for Black students was seen across all the performance levels (those at the 10th, 25th, 50th, 75th, and 90th percentiles).

## ACHIEVEMENT-LEVEL RESULTS...

Information is available on achievement-level results for racial/ethnic groups and other reporting categories at http://nationsreportcard.gov/reading_2007/data.asp.

## No change in score gaps

Significant score gaps persisted between White and minority eighth-graders. Although the average scores in 2007 for Black and Hispanic students increased in comparison to their scores in 1992, the White - Black and White Hispanic score gaps showed no significant change (figure 15).

Figure 15. Trend in eighth-grade NAEP reading average scores and score gaps, by selected racial/ethnic groups

* Significantly different ( $p<.05$ ) from 2007

NOTE: Black includes African American, and Hispanic includes Latino. Race categories exclude Hispanic origin. Score gaps are calculated based on differences between unrounded average scores.

Table 8. Percentage of students assessed in eighth-grade NAEP reading, by race/ethnicity: Various years, 1992-2007

| Race/ethnicity | 1992 | 1994 | 1998 | 2002 | 2003 | 2005 | 2007 |
| :--- | ---: | :---: | :---: | :---: | :---: | :---: | :---: |

NOTE: Black includes African American, Hispanic includes Latino, and Pacific Islander includes Native Hawaiian. Race categories exclude Hispanic origin. Detail may not sum to totals because results are not shown for the "unclassified" race/ethnicity category.
SOURCE: U.S. Department of Education, Institute of Education Sciences, National Center for Education Statistics, National Assessment of Educational Progress (NAEP), various years, 1992-2007 Reading Assessments.

## Score gains vary by gender

Neither male nor female students showed significant score changes between 2005 and 2007. While the score for female students showed no significant change in comparison to 1992, the score for male students was higher in 2007 than in 1992 (figure 16).

Female students continued to score higher on average in reading than male students in 2007. The 10 -point score gap between the two groups in 2007 was not significantly different from the gap in either 2005 or 1992.

Figure 16. Trend in eighth-grade NAEP reading average scores and score gaps, by gender

* Significantly different ( $p<.05$ ) from 2007.

NOTE: Score gaps are calculated based on differences between unrounded average scores.

Table 9. Average scores in eighth-grade NAEP reading, by reading context and gender: 2007

| Gender | Reading for literary <br> experience | Reading for <br> information | Reading to perform <br> a task |
| :--- | :---: | :---: | :---: |
| Male | $256^{*}$ | $260^{*}$ | $256^{*}$ |
| Female | 267 | 268 | 268 |

* Significantly different ( $p<.05$ ) from female students in 2007.

SOURCE: U.S. Department of Education, Institute of Education Sciences, National Center for Education Statistics,
National Assessment of Educational Progress (NAEP), various years, 1992-2007 Reading Assessments.

Female students scored higher on average than male students in all three contexts for reading. Female students scored 11 points higher in reading for literary experience, 8 points higher in reading for information, and 13 points ${ }^{2}$ higher in reading to perform a task (table 9).

[^8]
## Gaps in performance of public and private school students

Ninety-one percent of eighth-graders attended public schools in 2007, and 9 percent attended private schools. The average reading score for eighth-graders in public schools (261) was lower than for students in private schools overall (280) and lower than for students in Catholic schools specifically (282).

Trend results for public and Catholic school students, and for private school students in those years in which sample sizes were sufficient, are available at: http://nationsreportcard.gov/ reading_2007/r0038.asp.

## No gains for lower-income students since 2005

Changes in reading performance since 2005 varied by students' family incomes as indicated by their eligibility for free or reduced-price school lunch. Students who were not eligible for free or reduced-price lunch scored 1 point higher in 2007 than in 2005 (figure 17). On the other hand, average scores for students who were eligible for either
free or reduced-price lunch showed no significant change in comparison to 2005 .

As in grade 4, eighth-graders who were not eligible for free or reducedprice lunch scored higher on average than those who were eligible, and those eligible for reduced-price lunch scored higher than those eligible for free lunch.

Figure 17. Trend in eighth-grade NAEP reading average scores, by eligibility for free or reduced-price school lunch

* Significantly different ( $p<.05$ ) from 2007.

Table 10. Percentage of students assessed in eighth-grade NAEP reading, by eligibility for free or reduced-price school lunch: 2003, 2005, and 2007

| Eligibility status | 2003 | 2005 | 2007 |
| :--- | :---: | :---: | :---: |
| Eligible for free lunch | $26^{*}$ | $29^{*}$ | 31 |
| Eligible for reduced-price lunch | $7^{*}$ | $7^{*}$ | 6 |
| Not eligible | 55 | 56 | 55 |
| Information not available | $11^{*}$ | 8 | 7 |

Changes over time in the percentages of students based on their eligibility for free or reduced-price school lunch are presented in table 10. About one-third of eighth-graders assessed were eligible for free lunch in 2007.

[^9]
## State Performance at Grade 8

All of the 52 states and jurisdictions that participated in 2007 also participated in 2005, and 38 participated in the 1998 assessment, allowing for comparisons over time. As with grade 4, it is important to remember that performance results for states may be affected by differences in demographic makeup and exclusion and accommodation rates for students with disabilities and English language learners, which may vary considerably across states as well as across years.

## Six states show score increases since 2005

The map on the right highlights changes in states' average reading scores since 2005, with increases in six states and decreases in two states (figure 18). Of the six states with increases, Texas and Vermont showed increases both for students who were eligible for free/reducedprice school lunch and students who were not eligible.

## FOR MORE INFORMATION...

State Comparison Tool orders states by students' performance overall and for student groups both within an assessment year and based on changes across years (http://nces.ed.gov/nationsreportcard/nde/statecomp).
State Profiles provide information on each state's school and student populations and a summary of its NAEP results (http://nces.ed.gov/ nationsreportcard/states).

## Scores up in six states and down in seven states since 1998

Of the 38 states that participated in both the 1998 and 2007 assessments, 6 showed increases, and 7 showed decreases in average scores (figure 19). Three of the 6 states that had score gains also showed increases in the percentages of students performing both at or above Basic and at or above Proficient. These and other state results for grade 8 are provided in figure 20, tables 11 and 12, and appendix tables A-14 through A-20.

Figure 19. Changes in eighth-grade NAEP reading average scores between 1998 and 2007

## One state gains in all three reading contexts

The texts used to measure reading comprehension at grade 8 are classified with the framework dimension of context for reading. In addition to reading for literary experience and reading for information, the context reading to perform a task is also measured at grade 8. Reading for literary experience is measured with fictional texts that include stories and poetry. Reading for information is measured with articles and textbook material. Reading to perform a task is measured with documents and procedural materials.

Nationally, students improved their performance overall from 2005 to 2007, but they improved in only one of the reading contexts, reading for information. States also varied in their overall performance compared to their performance in the three reading contexts. For example, some states that showed increases in overall performance only improved their performance in one or two of the three reading contexts. Conversely, those states that decreased in their overall performance since 2005 did not decline in every reading context.

When compared to 2005...
... 1 of the 6 states that posted overall gains, Vermont, also showed gains in all three reading contexts, while 5 states showed gains in one or two of the reading contexts.
$\ldots 1$ of the 2 states showing a decrease in overall performance also showed a decrease in reading for literary experience and reading to perform a task, and 1 state showed a decrease in reading for information.
... 5 of the 44 states that showed no significant change in overall performance showed gains in at least one of the reading contexts, and 3 states showed a decline in one of the three reading contexts.

## Assessment Content at Grade 8

All three contexts for reading were assessed at grade 8. The proportion of assessment questions devoted to reading for literary experience was lower than the proportion at grade 4. At grade 8, equal proportions of assessment questions were devoted to reading for literary experience and reading for information. The remaining assessment questions were devoted to reading to perform a task, which was allotted one-half as much time as either literary or informational reading. The 2007 eighth-grade reading assessment included a total of 13 reading passages and 140 questions.

## Reading Achievement Levels at Grade 8

The following descriptions are abbreviated versions of the full achievement-level descriptions for grade 8 reading. The cut score depicting the lowest score representative of that level is noted in parentheses.

Basic (243): Eighth-grade students performing at the Basic level should demonstrate a literal understanding of what they read and be able to make some interpretations. When reading text appropriate to eighth grade, they should be able to identify specific aspects of the text that reflect the overall meaning, extend the ideas in the text by making simple inferences, recognize and relate interpretations and connections among ideas in the text to personal experience, and draw conclusions based on the text.

Proficient (281): Eighth-grade students performing at the Proficient level should be able to show an overall understanding of the text, including inferential as well as literal information. When reading text appropriate to eighth grade, they should be able to extend the ideas in
the text by making clear inferences from it, by drawing conclusions, and by making connections to their own experiences-including other reading experiences. Proficient eighth-graders should be able to identify some of the devices authors use in composing text.

Advanced (323): Eighth-grade students performing at the Advanced level should be able to describe the more abstract themes and ideas of the overall text. When reading text appropriate to eighth grade, they should be able to analyze both meaning and form and support their analyses explicitly with examples from the text, and they should be able to extend text information by relating it to their experiences and to world events. At this level, student responses should be thorough, thoughtful, and extensive.

The full descriptions can be found at http://www.nagb.org/frameworks/reading_07.pdf.

## What Eighth-Graders Know and Can Do in Reading

The item map below illustrates the range of reading ability demonstrated by eighth-graders. For example, students performing in the middle of the Basic range (with an average score of 261) were likely to be able to identify the appropriate text recommendation for a
specific situation. Students performing near the top of the Proficient range (with an average score of 318) were likely to be able to infer and explain traits of a character using specific examples.

GRADE 8 NAEP READING ITEM MAP

| Scale score | Question description |
| :--- | :--- |
| 500 |  |
| 365 | Use understanding of character to interpret author's purpose |
| 357 | Use examples to explain importance of setting to plot |
| 337 | Search dense text to retrieve relevant explanatory facts |
| 329 | Recognize narrative device and explain function in story |
| 326 | Follow directions to fully complete task |

## Sample Reading Passage

> The article below is an example of what an eighth-grader might read for information. The article uses a human interest approach to relate the investigative efforts of a middle-school student and how her efforts helped her community. The two sample questions that follow were based on this reading passage.

## KID FIGHTS CHEATER METERS AND WINS!

## The true story of a girl with a stopwatch and a bag of nickels who uncovered a local parking scandal and helped change the laws of her state . . .

Ellie Lammer wasn't trying to spark a revolt, she just wanted a haircut. That was in the fall of 1997. Ellie was 11 years old at the time, and she was getting her tresses trimmed in her hometown of Berkeley, California. When Ellie and her mom returned to their car, they found a parking ticket stuck to the windshield. It didn't seem possible: Less than an hour earlier, Ellie had pumped an hour's worth of coins into the meter. But now the needle was at zero, and Ellie's mom owed \$20.

Feeling cheated, Ellie dropped another nickel in the meter and twisted the knob. The needle clicked over to the four-minute mark. Ellie stared at her watch while her mom watched the meter. Less than three minutes later, all of the time had expired. There it was: proof that they'd been cheated. The city tore up the ticket when Ellie's mom complained about the meter.

But the experience left Ellie wondering how many other meters were inaccurate. Six months later, she decided to find out. She'd been looking around for a good science-fair project-and that meter in Berkeley still bothered her. So armed with a bag of nickels and a stopwatch, she hit the streets.

Ellie didn't have the time or money to test every meter, so she focused on a sample of 50 meters located in different parts of the city. To avoid inconveniencing motorists, she did her research after 6 P.M. and on Sundays, when the meters were not in use. She put in eight minutes' worth of nickels in each meter, then measured how much time it really gave.

The results were not pretty. Ellie's findings suggested that more than nine out of every ten meters in the city were inaccurate-and that every fourth parking meter was running out of time too quickly. With 3,600 parking meters in the city, that meant a lot of undeserved tickets. As Ellie wrote in her science-project report, "I learned which meters cheat you and which meters cheat the City of Berkeley. But I learned that almost all meters cheat someone, so beware."

When the science fair rolled around, Ellie presented her findings with computer-generated charts and graphs. Her classmates weren't very interested in her project. "It's not like they have to drive a car or put money in a parking meter," she explains. But her project was a huge hit with parents. More than 50 of them lined up that night to share their own parking-meter horror stories

After that, word about Ellie's meter project spread fast. Within a few weeks, Ellie got a call from with Ellie. local politician Diane Woolley. At the time, Berkeley was consid the politicians were impressed. "We accurate digital ones. Ellie shared her findings at ciltants hundreds of thousands of dollars," one don't get reports this thorough when we pad to purchase 2,000 new meters.
remarked. Based on Ellie's stuh
The California state legislature also decided to crow which requires California's 26 counties to presented her findings, they enacted "Lammer's Law, to be inaccurate must be fixed or dismantled. test the accuracy of parking meters. Any meter found

California Governor Pete Wilson signed the law on Norned he gratitude of those Californians commented, "Ellie's ingenuity and dedication has earch of exact change to feed the meters, only to who've dug through their purses and pockets green envelope of a parking ticket."
return to find their cars bearing the dreaded all
Ellie became a celebrity. She was in newspape CNN did a story about her. She was even a television news during the summer and fall of "It kind of a weird moment of being a celebrity," guest on the Late Show with David Letterman. "It was kind of a weird mom she says.

Ellie, who's now an eighth-grader at Martin Luther King Middle School, is proud of the work 's done. But she doesn't see meter monitoring as her life's work: "Right now I don't mind being known as the parking-meter girl, but I'm sure that later in life I'll want something different."

## Sample Question on Supporting Idea

This sample question asked students to take a critical perspective on a sentence from the article. The focus is not on the information itself, but on how that information functions in relation to other information in the article. This question was classified under the reading aspect, examining content and structure.

Seventy-two percent of eighth-graders selected the correct answer (choice C), recognizing that this supporting information was included to highlight the main subject of the article. Of the incorrect answers, choice B was selected by 14 percent of eighth-graders, perhaps making a literal connection between the money amount and the word "budget."

Percentage of eighth-grade students in each response category in 2007

> "We don't get reports this thorough when we pay consultants hundreds of thousands of dollars."

The author included this information to
show how the city saves money
describe the city budget
emphasize Ellie's achievement
criticize the city of Berkeley

| Choice A | Choice B | Choice C | Choice D | Omitted |
| ---: | ---: | ---: | ---: | ---: |
| 8 | 14 | 72 | 7 | \# |

\# Rounds to zero.
NOTE: Detail may not sum to totals because of rounding.

The table below shows the percentage of students within each achievement level who answered the question above correctly. For example, 72 percent of eighth-grade students performing at the Basic level selected the correct answer choice.

Percentage correct for eighth-grade students at each achievement level in 2007

| Overall | Below Basic | At Basic | At Proficient | At Advanced |
| ---: | ---: | ---: | ---: | ---: |
| 72 | 45 | 72 | 92 | 99 |

[^11]
## Sample Question on Drawing Conclusions

This sample question asked students to consider specific information provided in the article and to draw a conclusion from this information about the character of the person discussed in the article. This question was classified under the reading aspect, developing interpretation.

Student responses to this question were rated using the following four-level scoring guide:

Extensive - Responses use information in the article to provide a description of Ellie Lammer. Responses at this level provide at least two specific text-based things that she did and explain what those things say about her character.

> Choose two things Ellie Lammer did and explain what those things tell about her. Use examples from the article to support your answer.

## Response rated as "Extensive"

Ellie Lemoer gat chimed out of her money, and then decided that she mene 4 grieg to give up, the was gang to do experiments and take this probiconto the next level. This shews perseverance, became the chase to keep grieg with the problem avo thangh it mar time-cearnming, to holp people,
She ale chore te pose to motor wrong by tionigy them wing a dey watch, This shews intalligose, because che keen what methods te use in order to pere the maters inalemale.

## Response rated as "Essential"

```
She did her scence for project
on meters to sce how many other
people got cheated. Which means
she cares about other peopie and
not just hor self. At the end of her
orticle it soid she enioyed belng a
super Stor but wanted something more
in life.She wants to be someone
important.
```

Essential-Responses at this level provide one example of something Ellie Lammer did and explain what that says about her character. Responses at this level may provide a generalization about Ellie's actions without providing a specific example from the article; however, these responses do explain what her actions say about her character.

Partial—Responses at this level may focus on Ellie's actions without explaining what the actions tell about her character.

Unsatisfactory -Responses at this level demonstrate no understanding of Ellie's actions as described in the article or what those actions say about her character.

The first response on the left was rated "Extensive" because it uses two things that Ellie did as the bases for explaining two different aspects of her character. While the second response, rated "Essential," gives two aspects of Ellie's character, only the first is based on something Ellie did. Thirty-two percent of eighth-graders provided a response rated as "Extensive" on this question.

## Percentage of eighth-grade students in each response category in 2007

| Extensive | Essential | Partial | Unsatisfactory | Omitted |
| ---: | ---: | ---: | ---: | ---: |
| 32 | 17 | 41 | 5 | 5 |

NOTE: Detail may not sum to totals because a small percentage of responses that did not address the assessment task are not shown.

The table below shows the percentage of eighth-graders within each achievement level whose answer to the question on the left was rated as "Extensive." For example, 29 percent of eighth-graders performing at the Basic level provided extensive responses - they were able both to provide a reason and support it with details.

Percentage rated as "Extensive" for eighth-grade students at each achievement level in 2007

| Overall | Below Basic | At Basic | At Proficient | At Advanced |
| ---: | ---: | ---: | ---: | ---: |
| 32 | 8 | 29 | 54 | 77 |

## Technical Notes

## Sampling and Weighting

The schools and students participating in NAEP assessments are selected to be representative both nationally and for public schools at the state level. Samples of schools and students are drawn from each state and from the District of Columbia and Department of Defense schools. The results from the assessed students are combined to provide accurate estimates of the overall performance of students in the nation and in individual states and other jurisdictions.

While national results reflect the performance of students in both public schools and nonpublic schools (i.e., private schools, Bureau of Indian Education schools, and Department of Defense schools), state-level results reflect the performance of public school students only. More information on sampling can be found at http:// nces.ed.gov/nationsreportcard/about/nathow.asp.

Each school that participated in the assessment, and each student assessed, represents a portion of the population of interest. Results are weighted to make appropriate inferences between the student samples and the respective populations from which they are drawn. Sampling weights account for the disproportionate representation of the selected sample. This includes oversampling of schools with high concentrations of students from certain minority groups and the lower sampling rates of students who attend very small nonpublic schools.

## Interpreting Statistical Significance

Comparisons over time or between groups are based on statistical tests that consider both the size of the differences and the standard errors of the two statistics being compared. Standard errors are margins of error, and estimates based on smaller groups are likely to have larger margins of error. The size of the standard errors may also be influenced by other factors such as how representative the students assessed are of the entire population.

When an estimate has a large standard error, a numerical difference that seems large may not be statistically significant. Differences of the same magnitude may or may not be statistically significant depending upon the size of the standard errors of the estimates. For example, a 2-point difference between Black and Hispanic students may be statistically significant, while a 2-point difference between Black and American Indian/Alaska Native students may not be. Standard errors for the estimates presented in this report are available at http://nces.ed.gov/nationsreportcard/nde.

## School and Student Participation Rates

To ensure unbiased samples, NCES and the Governing Board established participation rate standards that states and jurisdictions were required to meet in order for their results to be reported. Participation rates for the original sample needed to be at least 85 percent for schools to meet reporting requirements. In the 2007 reading assessment, all 52 states and jurisdictions met participation rate standards at both grades 4 and 8 .

The national school participation rates for public and private schools combined were 98 percent for grade 4 and 97 percent for grade 8 . Student participation rates were 95 percent for grade 4 and 92 percent for grade 8 .

Participation rates needed to be 70 percent or higher to report results separately for private schools. While the school participation rate for private schools did meet the standard in 2007, it did not always meet the standard in previous assessment years. Therefore, comparisons could not be made for private schools as a group across all years. Participation rates for Catholic schools, however, were sufficient for reporting in 2007 and in previous assessment years. These data and other private school data are available at http:// nationsreportcard.gov/reading_2007/r0038.asp.

## National School Lunch Program

NAEP first began collecting data in 1996 on student eligibility for the National School Lunch Program (NSLP) as an indicator of poverty. Under the guidelines of NSLP, children from families with incomes below 130 percent of the poverty level are eligible for free meals. Those from families with incomes between 130 and 185 percent of the poverty level are eligible for reduced-price meals. (For the period July 1, 2006 through June 30, 2007, for a family of four, 130 percent of the poverty level was $\$ 26,000$, and 185 percent was $\$ 37,000$.)

As a result of improvements in the quality of the data on students' eligibility for NSLP, the percentage of students for whom information was not available has decreased in comparison to the percentages reported prior to the 2003 assessment. Therefore, trend comparisons are only made back to 2003 in this report. For more information on NSLP, visit http://www.fns.usda.gov/cnd/lunch/.

## Appendix Tables

## \# Rounds to zero.

NOTE: Black includes African American, and Hispanic includes Latino. Race categories exclude Hispanic origin. Students identified as both SD and ELL were counted only once under the combined SD and/or ELL category, but were counted separately under the SD and ELL categories. Detail may not sum to totals because of rounding. - Not available. The jurisdiction did not participate or did not meet the minimum participation guidelines for reporting.
\# Rounds to zero.
* Significantly different ( $p<.05$ ) from 2007 when only one jurisdiction or the nation is being examined.
${ }^{1}$ National results for assessments prior to 2002 are based on the national sample, not on aggregated state samples.
${ }^{2}$ Department of Defense Education Activity (overseas and domestic schools). Before 2005, DoDEA overseas and domestic schools were separate jurisdictions in NAEP. Pre-2005 data presented here were
recalculated for comparability.
NOTE: Black includes African American, and Hispanic includes Latino. Race categories exclude Hispanic origin.

## \# Rounds to zero.

$\ddagger$ Reporting standards not met. Sample size is insufficient to permit a reliable estimate.
${ }^{1}$ Department of Defense Education Activity (overseas and domestic schools).
NOTE: Black includes African American, Hispanic includes Latino, and Pacific Islander includes Native Hawaiian. Race categories exclude Hispanic origin.
Results are not shown for students whose race/ethnicity was "unclassified." Detail may not sum to totals because of rounding.

## U.S. DEPARTMENT OF EDUCATION

The National Assessment of Educational Progress (NAEP) is a congressionally authorized project sponsored by the U.S. Department of Education. The National Center for Education Statistics, a department within the Institute of Education Sciences, administers NAEP. The Commissioner of Education Statistics is responsible by law for carrying out the NAEP project.

THE NATIONAL ASSESSMENT GOVERNING BOARD
In 1988, Congress created the National Assessment Governing Board to set policy for the National Assessment of Educational Progress, commonly known as The Nation's Report Card ${ }^{\mathrm{TM}}$. The Governing Board is an independent, bipartisan group whose members include governors, state legislators, local and state school officials, educators, business representatives, and members of the general public.

[^0]:    $\uparrow$ Indicates the score was higher or the gap increased in 2007.
    $\downarrow$ Indicates the score was lower or the gap decreased in 2007.
    $\leftrightarrow$ Indicates there was no significant change in the score or the gap in 2007.
    $\ddagger$ Reporting standards not met. Sample size was insufficient to permit a reliable estimate.

[^1]:    Accommodations

[^2]:    ${ }^{1}$ Department of Defense Education Activity (overseas and domestic schools).
    SOURCE: U.S. Department of Education, Institute of Education Sciences, National Center for Education Statistics, National Assessment of Educational Progress (NAEP), 2005 and 2007 Reading Assessments.

[^3]:    - Not available. The jurisdiction did not participate or did not meet the minimum participation guidelines for reporting.
    * Significantly different ( $p<.05$ ) from 2007 when only one jurisdiction or the nation is being examined.
    ${ }^{1}$ National results for assessments prior to 2002 are based on the national sample, not on aggregated state samples.
    ${ }^{2}$ Department of Defense Education Activity (overseas and domestic schools). Before 2005, DoDEA overseas and domestic schools were separate jurisdictions in NAEP. Pre-2005 data presented here were recalculated for comparability.
    NOTE: State-level data were not collected in 2000.
    SOURCE: U.S. Department of Education, Institute of Education Sciences, National Center for Education Statistics, National Assessment of Educational Progress (NAEP), various years, 1992-2007 Reading Assessments.

[^4]:    NOTE: Regular type denotes a constructed-response question. Italic type denotes a multiple-choice question. The position of a question on the scale represents the average scale score attained by students who had a 65 percent probability of successfully answering a constructed-response question, or a 74 percent probability of correctly answering a four-option multiple-choice question. For constructedresponse questions, the question description represents students' performance rated as completely correct. Scale score ranges for reading achievement levels are referenced on the map. SOURCE: U.S. Department of Education, Institute of Education Sciences, National Center for Education Statistics, National Assessment of Educational Progress (NAEP), 2007 Reading Assessment.

[^6]:    * Significantly different ( $p<.05$ ) from 2007.

    NOTE: Sample sizes were insufficient to permit reliable estimates for American Indian/Alaska Native eighth-graders in 1992 and 1998. Black includes African American, Hispanic includes Latino, and Pacific Islander includes Native Hawaiian. Race categories exclude Hispanic origin.
    SOURCE: U.S. Department of Education, Institute of Education Sciences, National Center for Education Statistics, National Assessment of Educational Progress (NAEP), various years, 1992-2007 Reading Assessments.

[^7]:    \# Rounds to zero.

[^8]:    ${ }^{2}$ The score-point gain is based on the difference of the unrounded scores as opposed to the rounded scores shown in the figure.

[^9]:    * Significantly different ( $p<.05$ ) from 2007.

    NOTE: Detail may not sum to totals because of rounding.
    SOURCE: U.S. Department of Education, Institute of Education Sciences, National Center for Education Statistics, National Assessment of Educational Progress (NAEP), 2003, 2005, and 2007 Reading Assessments.

[^10]:    \# Rounds to zero
    $\ddagger$ Reporting standards not met. Sample size is insufficient to permit a reliable estimate.
    ${ }^{1}$ Department of Defense Education Activity (overseas and domestic schools).
    NOTE: Black includes African American, Hispanic includes Latino, and Pacific Islander includes Native Hawaiian. Race categories exclude Hispanic origin. Results are not shown for students whose race/ethnicity was "unclassified" and for students whose eligibility for free/reduced-price school lunch was not available.
    SOURCE: U.S. Department of Education, Institute of Education Sciences, National Center for Education Statistics, National Assessment of Educational Progress (NAEP), 2007
    Reading Assessment.

[^11]:    Statistics, National Assessment of Educational Progress (NAEP), 2007 Reading Assessment.

[^12]:    - Not available. Data were not collected at grade 8 in 2000.
    $\dagger$ Not applicable. Accommodations were not permitted in this sample.
    \# Rounds to zero.
    NOTE: Students identified as both SD and ELL were counted only once under the combined SD and/or ELL category, but were counted separately under the SD and ELL categories. Detail may not sum to totals because of rounding.
    SOURCE: U.S. Department of Education, Institute of Education Sciences, National Center for Education Statistics, National Assessment of Educational Progress (NAEP), various years, $1992-2007$ Reading Assessments.

[^13]:    - Not available. The jurisdiction did not participate or did not meet the minimum participation guidelines for reporting.
    ${ }^{1}$ Accommodations were not permitted in this assessment year.
    ${ }^{2}$ Department of Defense Education Activity (overseas and domestic schools). Before 2005, DoDEA overseas and domestic schools were separate jurisdictions in NAEP. Pre-2005 data presented here were recalculated for comparability.
