Acting Commissioner
The National Center for Education Statistics (NCES) is the primary federal entity for collecting, analyzing, and reporting data related to education in the United States and other nations. It fulfills a congressional mandate to collect, collate, analyze, and report full and complete statistics on the condition of education in the United States; conduct and publish reports and specialized analyses of the meaning and significance of such statistics; assist state and local education agencies in improving their statistical systems; and review and report on education activities in foreign countries.

NCES activities are designed to address high-priority education data needs; provide consistent, reliable, complete, and accurate indicators of education status and trends; and report timely, useful, and high-quality data to the U.S. Department of Education, the Congress, the states, other education policymakers, practitioners, data users, and the general public. Unless specifically noted, all information contained herein is in the public domain.

We strive to make our products available in a variety of formats and in language that is appropriate to a variety of audiences. You, as our customer, are the best judge of our success in communicating information effectively. If you have any comments or suggestions about this or any other NCES product or report, we would like to hear from you. Please direct your comments to

B-1 Poverty definition for Parent and Family Involvement in Education (PFI) analysis 60

## Highlights

This report presents data on parents' and families' involvement in their children's education in the United States. The data are from the Parent and Family Involvement in Education Survey of the 2003 National Household Education Surveys Program (PFI-NHES:2003). The survey was completed by parents of over 12,000 children in kindergarten through grade 12. Data highlights are shown below, along with examples of questions for each topic area of the questionnaire.

The NHES:2003 sample was selected using random digit dial (RDD) methods, and the data were collected using computer-assisted telephone interviewing (CATI) technology. The sample for the 2003 survey is nationally representative of all children in kindergarten through grade 12 enrolled in regular school or homeschooled in the 50 states and the District of Columbia. A Screener was used to collect information on household composition and interview eligibility. Screener interviews had a weighted Screener unit response rate of 65 percent. In households with one eligible child, the child was selected for PFI with certainty. In households with two eligible children, both were selected for PFI with certainty. If there were more than two eligible children/youth, then two were sampled with equal probability. The parent interview had a weighted unit response rate of 83 percent using base weights. The overall unit response rate for the Parent and Family Involvement in Education Survey in 2003 was 54 percent. A unit nonresponse bias analysis was undertaken for NHES:2003. (See Montaquila et al. forthcoming.) The analysis of unit nonresponse bias showed no evidence of bias in estimates computed with nonresponse adjusted weights from the PFINHES:2003 survey.

The results presented below were chosen to highlight some of the findings in the tables. To test the differences between estimates, Student's $t$ statistics were calculated. All differences reported were significant at the .05 level. More information about the statistical test used is in the Technical Notes section of this report, along with a discussion of sampling methodology.

Many of the tables include estimates for students in kindergarten through grade 12 . However, some tables are divided into estimates for students in kindergarten through grade 5 or in grades 6 through 12 . This is because for some topic areas (e.g., home activities), different questions were asked of parents of younger children than of parents of older children. Similarly, while a common set of selected school, household, and student characteristics are repeated across most tables, there are occasional variations in either the characteristics, the population, or both that are designed to fit particular data items. Students who were homeschooled were excluded from all of the tables.

## School Practices Encouraging Parents' Involvement

Parents were asked about school communication with families, such as sending the family personal notes or e-mails specifically about their child; sending newsletters, memos, or notices; and calling the family on the telephone. Parents were also asked about school practices to provide information to parents, such as information about their child's performance and their opportunities to volunteer at the school.

- As the student's grade level increased, relatively fewer parents reported that schools sent home notes or e-mails. Relatively more parents of fourth- and fifth-graders reported that schools sent home notes or e-mails specifically about their children ( 55 percent) than parents of students in sixth to eighth grade (49 percent) (table 1). Similarly, more parents of students in 6th to 8th grade reported that schools sent home notes or e-mails specifically about their children (49 percent) than parents of students in 9th and 10th grade (42 percent).

## Parents' Involvement in Their Children's School

Parents were asked if they had attended a general school meeting, a regularly scheduled parent-teacher conference, or a school or class event. They were also asked if they had acted as a volunteer or served on a school committee and if they had participated in fundraising for the school.

- The percentage of students in kindergarten through grade 12 whose parents reported (in a single-item question) that they had acted as a volunteer at their children's schools or served on a school committee was higher for students in private schools that were either church related or not church related ( 70 and 63 percent) than for students in public schools that were either assigned or selected by parents ${ }^{1}$ ( 38 and 40 percent) (table 3 ).
- The percentage of students whose parents had attended a general school meeting was higher in households where parents had completed higher levels of education. Specifically, the percentage of students whose parents reported that they had attended a general school meeting was higher for children whose parents had attended graduate or professional school ( 93 percent) or completed college ( 93 percent) than for children whose parents had completed only a high school education or the equivalent ( 84 percent), and children whose parents had completed less than a high school education (70 percent) (table 3).

## Parents' Involvement in Their Children's Homework

Parents were asked about the frequency with which the student did homework at home and the number of hours the student spent doing homework. They were also asked if there is a place in their home set aside for the student to do homework, if an adult in the household checks that homework is done, and the number of days per week that persons inside or outside the household help with homework.

- In kindergarten through grade 12,95 percent of children had parents who reported they assisted with homework (table 4). In addition, 85 percent of children in kindergarten through grade 12 had parents who reported that an adult in the household checked that homework was done.
- Overall, 90 percent of students in kindergarten through grade 12 had a place in their homes set aside for doing homework (table 4). Relatively fewer children of parents with less than a high school diploma had a place in their homes set aside for homework ( 80 percent), compared to children whose parents had completed a high school education or more- 90 percent for high school education or the equivalent, 91 percent for vocational/technical education after high school or some college, 89 percent for completed college, and 92 percent for attended graduate or professional school.

## Parents' Involvement With Their Children in Nonschool Activities

Parents of students in kindergarten through grade 3 were asked how often someone in the family had read to the student in the past week. Parents of students in kindergarten through grade 12 were asked about home activities with the student in the past week and outings with the student in the past month.

- In kindergarten through grade 5, the percentage of students whose parents reported they had played sports, active games, or exercised with them increased as parents' education level increased. Specifically, the percentage of students in kindergarten through grade 5 whose parents reported that they had played sports, active games, or exercised with their children was lower for children whose parents had completed less than a high school education (68 percent) than for children whose parents' highest educational attainment was a high school education or the equivalent ( 77 percent), children whose parents had completed vocational or technical education after high school or some college ( 80 percent), children whose parents had completed college ( 84 percent), and children whose parents had attended graduate or professional school (87 percent) (table 6).

[^0]- The percentage of students in kindergarten through grade 12 whose parents reported taking them to a public library in the past month was higher for Asian students ( 65 percent) than for White, non-Hispanic ( 41 percent), Black, non-Hispanic (49 percent), or Hispanic students (44 percent) (table 8).

## Student Experiences With Their Schools

Parents were asked about the extent to which they agreed or disagreed with statements about whether the student finds his or her schoolwork challenging, whether the student enjoys school, whether most students and teachers in the student's school respect each other, and whether the school makes it easy for the family to be involved.

- The percentage of students in kindergarten through grade 12 whose parents reported that they "strongly agreed" that the student's school makes it easy for the family to be involved was higher for students in households above the poverty level ( 45 percent) than for students in households at or below the poverty level ( 35 percent) (table 9 ).

## Parents' Expectations and Planned Financial Support for Their Children's Postsecondary Education

Parents were asked about the highest education level they expected their children to attain. Those who expected their children to continue education after high school were also asked questions about their plans to help pay for their children's education after high school.

- The percentage of students in kindergarten through grade 12 whose parents expected their children to earn a graduate or professional degree was higher among students in private schools that were not church related (48 percent) than in other types of private and public schools ( 28 to 41 percent) (table 10).
- Among students in kindergarten through grade 12 whose parents expected them to continue their education after high school, the percentage whose parents planned to help pay for their children's postsecondary education was higher in households where parents had completed higher levels of education. Specifically, the percentage of students whose parents reported that they planned to help their children pay for education after high school was higher for children whose parents had attended graduate or professional school ( 93 percent) or completed college ( 91 percent) than for children whose parents ${ }^{\text {‘ }}$ highest educational attainment was vocational or technical education after high school or some college ( 81 percent), children whose parents had completed only a high school education or the equivalent ( 75 percent), and children whose parents had completed less than a high school education ( 59 percent) (table 10).

## Student Activities in and out of School

Parents were asked whether the student participated in school activities. They were also asked about student participation in a variety of out-of-school activities, such as music lessons, sports, and educational programs.

- In kindergarten through grade 12, the percentage of students who reportedly participated in school activities increased as parents' education level increased. Specifically, the percentage of students in kindergarten through grade 12 whose parents reported that their children participated in school activities was higher for students whose parents had attended or completed graduate or professional school (70 percent) than for students whose parents' highest level of education completed was a vocational or technical education after high school or some college (58 percent), only a high school education or the equivalent (49 percent), and less than a high school education ( 35 percent) (table 11).

## Parents' Satisfaction With School

Parents were asked how well the school did at providing information in various areas related to the child and the school (e.g., their child's performance, opportunities to volunteer at the school). Parents were also asked about their satisfaction with the school, their children's teachers in 2002-03, the academic standards of the school, and order and discipline at the school. In addition, parents were asked about the amount of homework assigned and the amount of standardized testing at the school.

- The percentage of students in kindergarten through grade 12 whose parents reported their children's school did "very well" at providing information about the student's performance was lower among students in public, assigned schools ( 58 percent) than in public schools selected by parents and private schools ( 64 to 76 percent) (table 12).
- The percentage of students in kindergarten through grade 12 whose parents reported being "very satisfied" with their school was higher for students whose parents had graduated from college ( 64 percent) or attended graduate or professional school ( 64 percent) than for students whose parents' highest education was a high school education or the equivalent ( 59 percent) or less than a high school education ( 56 percent) (table 13).

## School Choice

Parents of public school students were asked if their children were in a regularly assigned school or a school that they chose. They were also asked whether the family had moved to the neighborhood so that the student would be eligible for the school.

- The percentage of public school students in kindergarten through grade 12 whose parents reported that their children attended a public school of choice was higher for Black, non-Hispanic students ( 25 percent) and Asian or Pacific Islander, non-Hispanic students ( 22 percent) than for White, non-Hispanic students ( 13 percent) (table 14). The percentage of public school students in kindergarten through grade 12 whose parents reported their children attended a public school of choice was also higher for Black, non-Hispanic students ( 25 percent) than for Hispanic students (14 percent).
- The percentage of public school students in kindergarten through grade 12 whose parents reported they moved to the neighborhood so that their child would be eligible for the school was higher for students whose parents had graduated from college ( 29 percent) or attended graduate or professional school ( 35 percent) than for children whose parents had completed vocational or technical education after high school or some college ( 24 percent), children whose parents' highest education was a high school education or the equivalent ( 24 percent), or children whose parents had less than a high school education (22 percent) (table 14).

## Services Provided for Students With Disabilities

Parents of students with disabilities were asked about the sources of services received for their children's special health needs (e.g., the local school district, a doctor, a clinic, or other health care provider), Individualized Education Program (IEP) services, and their children's participation in special education.

- The percentage of students with disabilities in kindergarten through grade 12 whose parents reported that their children received services through an IEP and that the family worked with the school to develop or change the student's IEP was lowest for students whose parents did not have a high school diploma ( 71 percent) and highest for students whose parents had attended graduate or professional school (96 percent) (table 15).
- The percentage of students with disabilities in kindergarten through grade 12 whose parents reported that their children received services through an IEP and that the family worked with the school to develop or change the student's IEP was higher for White, non-Hispanic students ( 92 percent) than for Black, non-Hispanic students ( 81 percent), and higher for both White, non-Hispanic ( 92 percent) and Asian or Pacific Islander, non-Hispanic students ( 93 percent) than for Hispanic students ( 75 percent) (table 15).

Table 1. Percentage of students in grades $K$ through 12 whose parents reported school-initiated communication practices, by means of communication and selected characteristics: 2002-03

| Characteristic | Number of students in grades K through 12 (thousands) | Means by which school communicated with parents |  |  |

${ }^{1}$ Parents of students in grades K through 12 were asked to rate school performance relative to the provision of seven types of information (items $1-7$ in the list below). Parents of students in grades 6 through 12 were asked to rate school performance for the provision of nine types of information (items 1-9 in the list that follows): (1) letting them know between report cards about student's school performance; (2) helping them understand what children of the student's age are like; (3) making them aware of chances to volunteer at school; (4) helping them help their child learn at home; (5) providing information about community services; (6) providing information about how to help with homework; (7) providing information about why their child was placed in particular groups or classes; (8) providing information on how to help their child plan for college or vocational school; and (9) providing information about how to help their child plan for work after completing his or her education. Response options were does it "very well," "just okay," "not very well," "doesn't do it at all," or "don't know." Answers of "don't know" were imputed. The table estimates indicate the percentage of parents who said their child's school provided information on the given topic (i.e., parents who gave any answer other than "doesn't do it at all").
${ }^{2}$ This question was only asked of parents of children in grades 6 through 12 .
${ }^{3}$ Students whose parents reported that their classes were "ungraded" were excluded from the analyses of grade level.
NOTE: Students who were homeschooled were excluded from the table. Detail may not sum to totals because of rounding.

[^2]Table 3. Percentage of students in grades $K$ through 12 whose parents reported participation in school-related activities, by activity type and selected characteristics: 2002-03-Continued

| Characteristic | Number of students in K through 12 (thousands) | Participation in school activities by parent or other household member |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | Attended a general school meeting | Attended regularlyscheduled parentteacher conference | Attended a school or class event | Acted as volunteer or served on school committee | Participated in school fundraising |
| Total | 51,388 | 88 | 77 | 70 | 42 | 62 |
| Student's sex |  |  |  |  |  |  |
| Male | 26,328 | 87 | 78 | 67 | 41 | 59 |
| Female ....................................................................................... | 25,060 | 88 | 76 | 73 | 42 | 65 |
| Student experiences in school |  |  |  |  |  |  |
| Student participated in school activities ........................................... | 29,616 | 91 | 78 | 84 | 48 | 69 |
| Teacher or school contacted parent about behavior problems .............. | 9,856 | 86 | 83 | 63 | 34 | 55 |
| Teacher or school contacted parent about schoolwork problems .......... | 13,307 | 88 | 83 | 67 | 36 | 59 |
| Student grades or marks ${ }^{2}$ |  |  |  |  |  |  |
| Mostly A's or excellent ................................................................ | 20,868 | 91 | 77 | 78 | 50 | 69 |
| Mostly B's or above average ......................................................... | 18,673 | 87 | 76 | 69 | 40 | 61 |
| Mostly C's or average .................................................................. | 9,785 | 82 | 78 | 60 | 32 | 53 |
| Mostly D's or lower, or below average or failing .............................. | 2,062 | 81 | 81 | 43 | 21 | 43 |

${ }^{1}$ Students whose parents reported that their classes were "ungraded" were excluded from the analyses of grade level.
${ }^{2}$ Parents were asked whether overall, across all subjects, the student got mostly A's, mostly B's, mostly C's, mostly D's or lower, or whether the student's school did not give those grades. If the student's school did not give letter grades (e.g., A, B, C), they were asked whether the parent would describe the student's work at school as excellent, above average, average, below average, or failing. The two questions about grades or marks were combined for the table.
NOTE: Students who were homeschooled were excluded from the table. Detail may not sum to totals because of rounding.

[^3]Table 3a. Standard errors of the percentage of students in grades $K$ through 12 whose parents reported participation in school-related activities, by activity type and selected characteristics: 2002-03Continued

| Characteristic | Number of students in K through 12 (thousands) | Participation in school activities by parent or other household member |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | Attended a general school meeting | Attended regularlyscheduled parentteacher conference | Attended a school or class event | Acted as volunteer or served on school committee | Participated in school fundraising |
| Total | 94.8 | 0.4 | 0.4 | 0.4 | 0.6 | 0.6 |
| Student's sex |  |  |  |  |  |  |
| Male | 282.6 | 0.5 | 0.6 | 0.7 | 0.9 | 0.7 |
| Female ....................................................................................... | 272.3 | 0.6 | 0.6 | 0.6 | 0.8 | 0.7 |
| Student experiences in school |  |  |  |  |  |  |
| Student participated in school activities ........................................... | 284.2 | 0.4 | 0.6 | 0.4 | 0.9 | 0.7 |
| Teacher or school contacted parent about behavior problems .............. | 210.9 | 0.9 | 1.0 | 1.2 | 1.2 | 1.2 |
| Teacher or school contacted parent about schoolwork problems .......... | 245.7 | 0.8 | 0.9 | 1.0 | 1.1 | 1.1 |
| Student grades or marks ${ }^{2}$ |  |  |  |  |  |  |
| Mostly A's or excellent ................................................................. | 283.8 | 0.6 | 0.8 | 0.7 | 0.9 | 0.9 |
| Mostly B's or above average ......................................................... | 268.1 | 0.6 | 0.7 | 0.7 | 0.8 | 0.9 |
| Mostly C's or average .................................................................. | 251.6 | 1.0 | 1.2 | 1.1 | 1.4 | 1.2 |
| Mostly D's or lower, or below average or failing .............................. | 131.4 | 2.3 | 2.5 | 3.3 | 2.8 | 3.0 |

${ }^{1}$ Students whose parents reported that their classes were "ungraded" were excluded from the analyses of grade level.
${ }^{2}$ Parents were asked whether overall, across all subjects, the student got mostly A's, mostly B's, mostly C's, mostly D's or lower, or whether the student's school did not give those grades. If the student's school did not give letter grades (e.g., A, B, C), they were asked whether the parent would describe the student's work at school as excellent, above average, average, below average, or failing. The two questions about grades or marks were combined for the table.
NOTE: Students who were homeschooled were excluded from the table. Detail may not sum to totals because of rounding.

$\dagger$ Not applicable. Parents could not report that someone helped more days than the student had homework.
\# Rounds to zero.
! Interpret data with caution.
${ }^{1}$ Persons inside or outside the household included relatives, another adult living inside the household, a tutor, someone at an after-school program, or an adult living outside the child's home.
${ }^{2}$ Students whose parents reported that their classes were "ungraded" were excluded from the analyses of grade level.
${ }^{3}$ Parents were asked how often their children did homework, either at home, at an after-school program, or somewhere else outside of school. Overall, the percentage of students in kindergarten through 12th grade whose parents reported that their children had homework was 96 percent. One percent of students were reported by parents to never do homework, and 3 percent were reported to not have homework.
NOTE: Students who were homeschooled were excluded from all tables. Students who never did homework and students to whom no homework was given were excluded from this table, since no further questions about homework were asked. Detail may not sum to totals because of rounding.

\# Rounds to zero.
! Interpret data with caution.
${ }^{1}$ This question was only asked of parents of children in grades 6 through 12 who expected their children to continue education after high school.
${ }^{2}$ Students whose parents reported that their classes were "ungraded" were excluded from the analyses of grade level.
${ }^{3}$ Parents were asked whether overall, across all subjects, the student got mostly A's, mostly B's, mostly C's, mostly D's or lower, or whether the student's school did not give those grades. If the student's school did not give letter grades (e.g., A, B, C), they were asked whether the parent would describe the student's work at school as excellent, above average, average, below average, or failing. The two questions about grades or marks were combined for the table.
NOTE: Students who were homeschooled were excluded from the table. Detail may not sum to totals because of rounding.

| Mostly D's or lower, or below average or failing $\qquad$ | 131.4 | 1.3 | 2.3 | 2.4 | 2.1 | 2.8 | 1.5 | 3.9 |

$\dagger$ Not applicable.
${ }^{1}$ This question was only asked of parents of children in grades 6 through 12 who expected their children to continue education after high school.
${ }^{2}$ Students whose parents reported that their classes were "ungraded" were excluded from the analyses of grade level.
${ }^{3}$ Parents were asked whether overall, across all subjects, the student got mostly A's, mostly B's, mostly C's, mostly D's or lower, or whether the student's school did not give those grades. If the student's school did not give letter grades (e.g., A, B, C), they were asked whether the parent would describe the student's work at school as excellent, above average, average, below average, or failing. The two questions about grades or marks were combined for the table.

NOTE: Students who were homeschooled were excluded from the table. Detail may not sum to totals because of rounding.

${ }^{1}$ Parents of students in grades K through 12 were asked to rate school performance relative to the provision of seven types of information (items 1-7 in the list below). Parents of students in grades 6 through 12 were asked to rate school performance for the provision of nine types of information (items 1-9 in the list that follows): (1) letting them know between report cards about student's school performance; (2) helping them understand what children of the student's age are like; (3) making them aware of chances to volunteer at school; (4) helping them help their child learn at home; (5) providing information about community services; (6) providing information about how to help with homework; (7) providing information about why their child was placed in particular groups or classes; (8) providing information on how to help their child plan for college or vocational school; and (9) providing information about how to help their child plan for work after completing his or her education. Response options were does it "very well," "just okay," "not very well," "doesn't do it at all," or "don't know."
${ }^{2}$ This question was only asked of parents of children in grades 6 through 12.
${ }^{3}$ Students whose parents reported that their classes were "ungraded" were excluded from the analyses of grade level.
NOTE: Students who were homeschooled were excluded from the table. Detail may not sum to totals because of rounding.

## Appendix A: Technical Notes

## Survey Methodology and Data Reliability

The National Household Education Surveys Program (NHES) is a set series of telephone surveys sponsored by the U.S. Department of Education's National Center for Education Statistics (NCES). NHES surveys focused on parent and family involvement in education in 1996 and 2003. This report presents data from the Parent and Family Involvement in Education Survey of the 2003 NHES (NHES:2003). NHES:2003 data collection was conducted by Westat and took place from January through April of 2003. This section provides a brief description of the survey methodology; further details appear in Hagedorn et al. (2004a).

The NHES:2003 sample was selected using random digit dial (RDD) methods, and the data were collected using computer-assisted telephone interviewing (CATI) technology. A random sample of telephone numbers was selected in the first stage, and within each household with eligible children, at least one eligible child was selected in the second stage. ${ }^{1}$ The sample for the 2003 survey is nationally representative of all children in kindergarten through grade 12 enrolled in regular school or homeschooled in the 50 states and the District of Columbia. Different probabilities of selection were used to sample children, depending on the characteristics of the telephone number and the number of eligible children in the household, and in some households more than one child was selected; these unequal selection probabilities and the clustering effect of sampling more than one child in some households were accounted for in estimation.

In the Parent and Family Involvement in Education interview, information was collected about demographic characteristics, homeschooling, school choice, types and frequency of family involvement in children's schools, school information practices to involve and support families, learning activities with children outside of school, and the involvement of nonresidential parents. The person chosen as the respondent for the interview was the parent or guardian in the household who knew the most about the child's education. Although the interview respondent was an adult, the sampling unit and unit of analysis is the child. Multiple attempts were made to complete interviews with persons not available at the time of selection. Interviews were conducted in both English and Spanish. Nine percent of the interviews were conducted in Spanish. The parent interview was completed by the parents of 12,426 of the 14,942 sampled children in kindergarten through grade 12 .

## Data Reliability

Estimates produced using data from the survey are subject to two types of error, sampling and nonsampling errors. Nonsampling errors are errors made in the collection and processing of data. Sampling errors occur because the data are collected from a sample rather than the whole population.

## Nonsampling Errors

Nonsampling error is the term used to describe variations in the estimates that may be caused by population coverage limitations and data collection, processing, and reporting procedures. The sources of nonsampling errors are typically problems like unit ${ }^{2}$ and item nonresponse, the differences in respondents' interpretations of the meaning of the questions, response differences related to the particular time the survey was conducted, and mistakes in data preparation. In the 2003 survey, efforts were made to minimize nonsampling error through cognitive testing in the survey design stage, a two-stage field test of the survey, online data edits and postinterview edits, and a comparison of the survey estimates with similar estimates from previous surveys.

An important source of nonsampling error for a telephone survey is the failure to include persons who do not live in households with telephones. This is particularly problematic in random digit dial (RDD) surveys

[^15]because so little is known about the sampled telephone numbers with which contact has not been made. The October 2001 Current Population Survey (CPS) shows that 95.8 percent of all adults ages 16 and older live in households with telephones and 95.2 percent of persons age 4 to 20 live in households with telephones (based on independent tabulations of the October 2001 CPS). Estimation procedures were used to help reduce the bias in the estimates associated with excluding the 4 percent of children who do not live in households with telephones. An issue that has arisen in recent years is households that have cell phones rather than landlines. Specific statistics on "cell phone only households" will be available from the February 2004 CPS.

Several studies have examined telephone coverage bias for subsamples of the population in NHES. For example, Brick, Burke, and West (1992) looked at undercoverage bias for 3- to 5-year-olds and 14- to 21-yearolds. Brick (1996) examined undercoverage bias for $0-$ to 2 -year-olds and adults. Undercoverage bias for 3to 7-year-olds was examined by Brick et al. (1997), and undercoverage bias for estimates of characteristics of households and for adults was investigated by Montaquila, Brick, and Brock (1997). These studies found that with very few exceptions, the adjusted weights yielded estimates with absolute telephone coverage bias of 2 percent or less. The only important exceptions are estimates of educational attainment for certain subgroups of adults (in particular, Blacks, Hispanics, and renters).

Another potential source of nonsampling error is respondent bias. Respondent bias occurs when respondents systematically misreport (intentionally or unintentionally) information in a study. There are many different forms of respondent bias. One of the best known is social desirability bias, which occurs when respondents give what they believe is the socially desirable response. For example, surveys that ask about whether respondents voted in the most recent election typically obtain a higher estimate of the number of people who voted than do voting records. Although respondent bias may affect the accuracy of the results, it does not necessarily invalidate other results from a survey. If there are no systematic differences among specific groups under study in their tendency to give socially desirable responses, then comparisons of the different groups will accurately reflect differences among the groups. In this report, there may be a tendency for respondents to say that they participated in a school activity when they did not, went on outings when they did not, expect to pay for their children's education after high school when they do not, etc. There is no a priori reason, however, to believe that some parents are more likely than others to give a socially desirable response. Thus, it is likely that contrasts in this E.D. TAB reflect true differences by school, family, and student characteristics.

Another form of respondent bias occurs when respondents give unduly positive assessments about those close to them. For example, parents may give rosier assessments about their children's school experiences than might be obtained from school records or from the children themselves. It is possible that parents who are highly involved in their children's schools are more likely than those who are not so involved to say that their children are doing well in school. However, it is also possible that parents who are highly involved in their children's schools have more information than those who are less involved on which to base their reports. This information could be positive or negative. Thus, it is equally conceivable that parents who are highly involved in their children's schools are less likely than other parents to give rosy assessments of their children's school experiences. Readers should be aware that respondent bias may be present in this survey as in any survey. It is not possible to state precisely how such bias may affect the results.

## Response Rates

In the 2003 survey, Screener interviews were completed with 32,049 households, with a weighted Screener unit response rate of 65 percent. A Screener was used to collect information on household composition and interview eligibility. In households with one eligible child, the child was selected for PFI with certainty. In households with two eligible children, both were selected for PFI with certainty. If there were more than two eligible children/youth, then two were sampled with equal probability. The parent interview was completed by the parents of 12,426 of the 14,942 sampled children in kindergarten through the $12^{\text {th }}$ grade; these yielded a weighted unit response rate of 83 percent using base weights. Thus, the overall unit response rate for the Parent and Family Involvement in Education Survey in 2003 was 54 percent (the product of the Screener unit response rate and the parent interview unit response rate).

A unit nonresponse bias analysis was undertaken for NHES:2003. (See Montaquila et al. forthcoming.) This study involved an examination of unit response rates as a whole and for various subgroups, an analysis to determine characteristics that are associated with Screener unit nonresponse, and a comparison of estimates based on adjusted and unadjusted weights. The analysis of unit nonresponse bias showed no evidence of bias in estimates computed with nonresponse adjusted weights from the PFI-NHES:2003 survey. The statistical adjustments used in weighting may have corrected at least partially for biases that might have existed due to differential unit nonresponse. Unit nonresponse bias may still be present in other variables that were not studied.

Item nonresponse (i.e., the failure to complete some items in an otherwise completed interview) was very low for most items in the 2003 survey. The item nonresponse rates for most variables included in this report are 3 percent or lower. All variables in the report had nonresponse rates of 6 percent or lower. Variables in this report that had nonresponse rates that were higher than 3 percent are the following: whether the family worked with the school to develop or change an IEP; the parent's feelings about the amount of standardized testing done at the child's school; and parent reports about how well the school provided information about community services, how to help their child plan for college, and how to help their child plan for work. Items with missing data were imputed using a hot-deck procedure (Rao and Shao 1992) in which cells are formed that contain cases with similar characteristics and a donor value is used to impute the missing value. The estimates included in this report are based on the imputed data.

## Sampling Errors

The sample of telephone households selected for the 2003 survey is just one of many possible samples that could have been selected. Therefore, estimates produced from this sample may differ from estimates that would have been produced from other samples. This type of variability is called sampling error because it arises from using a sample of households with telephones, rather than having surveyed all households with telephones.

The standard error is a measure of the variability due to sampling when estimating a statistic; standard errors for estimates presented in this report were computed using a jackknife replication method. Standard errors can be used as a measure of the precision expected from a particular sample. The probability that a sample estimate would differ from the population parameter obtained from a complete census count by less than 1 standard error is about 68 percent. The chance that the difference would be less than 1.65 standard errors is about 90 percent; and that the difference would be less than 1.96 standard errors, about 95 percent.

Standard errors for all of the estimates are presented in the tables. These standard errors can be used to produce confidence intervals. For example, an estimated 61 percent of parents reported in 2003 that the school did very well at letting them know between report cards how their child was doing in school. This figure has an estimated standard error of 0.6 . Therefore, the estimated 95 percent confidence interval for this statistic is approximately 60 to 62 percent $(61 \pm 1.96(0.6))$. That is, if the processes of selecting a sample, collecting the data, and constructing the confidence interval were repeated, it would be expected that in 95 out of 100 samples from the same population, the confidence interval would contain the true participation rate.

## Weighting

All of the estimates in this report are based on weighting the observations using the probabilities of selection of the respondents and other adjustments to partially account for nonresponse and coverage bias. Weights were developed to produce unbiased and consistent estimates of the national totals. The weight used in this E.D. TAB is FPWT, the weight variable used to estimate the characteristics of children and youth. In addition to properly weighting the responses, special procedures for estimating the statistical significance of the estimates were employed because the NHES:2003 data were collected using a complex sample design. Complex sample designs result in data that violate some of the assumptions that are normally used to assess
the statistical significance of results from a simple random sample. For example, frequently the standard errors of the estimates from these surveys are larger than would be expected if the sample was a simple random sample and the observations were independent and identically distributed random variables. Eighty replicate weights, FPWT1 to FPWT80, were used to produce estimates of the sampling errors of the estimates. The estimates and standard errors presented in this report were produced using Wesvar Complex Samples software and a jackknife replication procedure (Westat 2000).

## Statistical Tests

The tests of significance used in this E.D. TAB are based on Student's $t$ statistics for the comparison of individual estimates and for bivariate relationships. The test used assumes the two subgroups are independent. Due to the sampling of two children in some households with eligible children, the two subgroups are not truly independent if the two children are in the different subgroups in the comparison. However, for most items, any covariance between children in the same household is expected to be positive. Therefore, the $t$-tests that do not reflect this covariance will generally be conservative. To test for differences between subgroups, standard errors were computed using jackknife replication methods. To test for a difference between two subgroups in the population proportion having a particular characteristic, say $P_{1}$ versus $P_{2}$, the test statistic is computed as:

$$
T=\frac{p_{2}-p_{1}}{\sqrt{\left[\text { s.e. }\left(p_{1}\right)\right]^{2}+\left[\text { s.e. }\left(p_{2}\right)\right]^{2}}},
$$

where $p_{i}$ is the estimated proportion of subgroup $i(i=1,2)$ having the particular characteristic and s.e. $\left(p_{i}\right)$ is the standard error of that estimate. Thus, if $p_{I}$ is for the 35 percent of students in households that were above the poverty level whose parents "strongly agreed" that the student's school makes it easy for the family to be involved there, with a standard error of 1.6 , and $p_{2}$ is for the 45 percent of students in households that were at or below the poverty level whose parents "strongly agreed" that the student's school makes it easy to be involved there, with a standard error of $.6, T=5.89$.

For the aforementioned comparison, the decision rule is to reject the null hypothesis (i.e., that there is no difference between the two groups in the population in terms of the proportion having the characteristic) if $|T|>t_{\frac{\alpha}{2} ; d f}$, where $t_{\frac{\alpha}{2} ; d f}$ is the value such that the probability that a Student's $t$ random variable with $d f$ degrees of freedom exceeds that value is $a / 2$.

## Appendix B: Glossary

Each variable used in analyses for this E.D. TAB is described below. First, demographic variables used in the tables are described. These are alphabetized within topic. Second, other variables are described in the order that they appear in the tables.

When the variable is in the Parent and Family Involvement in Education Survey of the 2003 National Household Education Surveys Program (PFI-NHES:2003) data file, the variable name appears in parentheses after the bold entry name. If a variable is not on the data file, but constructed for the purpose of this report, information is provided about how the variable was derived. For more information on variable construction, please see Hagedorn et al. (2004b).

## SCHOOL CHARACTERISTICS

SCHOOL SCHEDULE (SSCHEDUL): This variable is used to classify whether the student went to a school with a traditional schedule or a year-round schedule. The data for SSCHEDUL were taken directly from the PFI parent questionnaire (PC14) when available. Otherwise, they were imputed.

SCHOOL TYPE (SCHLTYPE): The variable SCHLTYPE classifies the school currently attended as either public or private using the variable SPUBLIC (PC1). Schools that are public are further classified using the variable SCHOICE (PC2) according to whether the school was chosen or assigned. Schools that are private are also classified using the variable SRELGON (PC9) as being church-related or not church-related. Otherwise, the data are imputed. The values for SCHLTYPE are: 1) = Public, assigned; 2) Public, chosen; 3) Private, church-related; 4) Private, not church-related; and -1) Home school.

## HOUSEHOLD CHARACTERISTICS

HOUSEHOLD POVERTY STATUS (POVERTY): NHES provides an approximate measure of poverty. Households were asked to report the total income of all persons in the household over the past year using income ranges rather than exact dollars. The income variable used to construct POVERTY was HINCOME (PY16OV) that listed possible income ranges (e.g., $\$ 10,001$ to $15,000, \$ 15,001$ to $\$ 20,000$, etc., up to over $\$ 100,000$ ). If data for HINCOME were missing, they were imputed. Using the income ranges and household size, poverty thresholds were used to establish poverty status. Thresholds to define poverty were based on weighted averages from 2002 census poverty thresholds. A household was considered in poverty if a household of a particular size matched the income categories shown in table A-1 below.

Table B-1. Poverty definition for Parent and Family Involvement in Education (PFI) analysis

| Household size | Income categories in variable HINCOME (PY16OV) |
| :--- | :---: |
| 1 | Less than or equal to $\$ 10,000$ |
| 2 | Less than or equal to $\$ 15,000$ |
| 3 | Less than or equal to $\$ 15,000$ |
| 4 | Less than or equal to $\$ 20,000$ |
| 5 | Less than or equal to $\$ 25,000$ |
| 6 | Less than or equal to $\$ 25,000$ |
| 7 | Less than or equal to $\$ 30,000$ |
| 8 | Less than or equal to $\$ 35,000$ |
| $9+$ | Less than or equal to $\$ 40,000$ |

[^16]PARENTS' HIGHEST EDUCATION LEVEL (PARGRADE): The variable PARGRADE indicates the highest level of education for the subject child's parents or nonparent guardians who reside in the household. It is constructed from questions in the PFI parent questionnaire about the mother's education and whether she received a high school diploma or equivalent (MOMGRADE, PU7; MOMDIPL, PU8 ) and the father's education and whether he received a high school diploma or equivalent (DADGRADE, PV7; DADDIPL, PV8). If these data were missing for a household member, they were imputed. The values for PARGRADE are: 1) Less than high school diploma; 2) High school graduate or equivalent; 3) Vocational/technical education after high school or some college; 4) College graduate; and 5) Graduate or professional school.

PARENTS' LANGUAGE (LANGUAGE): The variable LANGUAGE indicates whether or not parent(s)/guardian(s) in the household know English. LANGUAGE was created using variables from the PFI parent questionnaire about the mother and father's language (MOMLANG (PU2), MOMSPEAK (PU3), DADLANG (PV2) and DADSPEAK (PV3)). If these data were missing for a household member, they were imputed. A parent is categorized as knowing English if English was one of his/her first languages or one of the primary languages he/she spoke in the household at the time of the survey. The values for LANGUAGE are: 1) 1 = Both/only parent(s) learned English as a child or currently speak(s) English in the home; 2) One of two parents learned English as a child or currently speaks English in the home; and 3) No parent learned English as a child and both/only parent(s) currently speak(s) a non-English language in the home.

## STUDENT CHARACTERISTICS

STUDENT'S GRADE LEVEL (ALLGRADE): This variable was constructed from parent reports of student grade level in GRADE (PB6) or grade level equivalent in GRADEEQ (PB7) when available. Otherwise, it was imputed. Parent reports that the student was in transitional kindergarten, kindergarten, or prefirst grade were all counted as kindergarten for ALLGRADE. If the variable GRADE indicated that a child was in grades 1 through 12, the variable GRADE was used to set ALLGRADE. If the variable GRADE indicated that a child was in an ungraded class, in special education, or was homeschooled, and the variable for grade equivalent, GRADEEQ, was equal to U for "ungraded" or was missing, then ALLGRADE was set to U for ungraded. Otherwise, if the variable GRADE indicated that a child was in an ungraded class, in special education, or was homeschooled, and the variable for grade equivalent was not missing, then ALLGRADE was equal to the grade equivalent given in GRADEEQ. The values for ALLGRADE are: 1) K: Transitional kindergarten, kindergarten, and prefirst grade; 2) 1: First grade or equivalent; 3) 2: Second grade or equivalent; 4) 3: Third grade or equivalent; 5) 4: Fourth grade or equivalent; 6) 5: Fifth grade or equivalent; 7) 6: Sixth grade or equivalent; 8) 7: Seventh grade or equivalent; 9) 8: Eighth grade or equivalent; 10) 9: Ninth grade or equivalent/freshman; 11) 10: Tenth grade or equivalent/sophomore; 12) 11: Eleventh grade or equivalent/junior; 13) 12: Twelfth grade or equivalent/senior; and 14) U: Ungraded/no equivalent.

STUDENT'S RACE/ETHNICITY (RACEETH2): The variable RACEETH2 indicates the race and ethnicity of the child and is based on the variables for race (CRACE, PI2) and Hispanic origin (CHISPAN, PI3) in the PFI parent questionnaire. If these data were missing, they were imputed. If the respondent designates the child's ethnicity as Hispanic, RACEETHN is Hispanic regardless of whether RACE was classified as White, Black, Asian or Pacific Islander, or another race. The values of RACEETH2 are: 1) White, non-Hispanic; 2) Black, non-Hispanic; 3) Hispanic; 4) Asian or Pacific Islander; and 5) All other races, non-Hispanic.

STUDENT'S SEX (SEX): The data for the variable SEX are taken directly from the PFI parent questionnaire (PA3) when available. Otherwise, they were imputed.

## MEANS BY WHICH SCHOOL COMMUNICATED WITH PARENTS

NOTES OR E-MAIL (FSNOTES): The data for FSNOTES are taken directly from the PFI parent questionnaire (PE4a) when available. Otherwise, they were imputed.

NEWSLETTERS, MEMOS, OR NOTICES (FSMEMOS): The data for FSMEMOS are taken directly from the PFI parent questionnaire (PE4b) when available. Otherwise, they were imputed.

TELEPHONE (FSPHONE): The data for FSPHONE are taken directly from the PFI parent questionnaire (PE4c) when available. Otherwise, they were imputed.

## TOPICS ABOUT WHICH SCHOOL PROVIDED INFORMATION

STUDENT'S PERFORMANCE: In table 2, the data for whether the school provided information on this topic are based on a recode of the variable FSSPPERF (PE5a) in the PFI parent questionnaire. Responses indicating that the school provided this information "very well," "just okay," or "not very well" (FSSPPERF $=1,2$, or 3) were included. Responses indicating that the school "doesn't do it at all" $($ FSSPPERF $=4)$ were excluded. Otherwise, values were imputed.

WHAT CHILDREN OF THE STUDENT'S AGE ARE LIKE: In table 2, the data for whether the school provided information on this topic are based on a recode of the variable FSSPCDEV (PE5b) in the PFI parent questionnaire. Responses indicating that the school provided this information "very well," "just okay," or "not very well" (FSSPCDEV $=1,2$, or 3 ) were included. Responses indicating that the school "doesn't do it at all" $(\mathrm{FSSPCDEV}=4)$ were excluded. Otherwise, values were imputed.

OPPORTUNITIES TO VOLUNTEER: In table 2, the data for whether the school provided information on this topic are based on a recode of the variable FSSPVOLN (PE5c) in the PFI parent questionnaire. Responses indicating that the school provided this information "very well," "just okay," or "not very well" (FSSPVOLN $=1,2$, or 3) were included. Responses indicating that the school "doesn't do it at all" ( $\mathrm{FSSPVOLN}=4$ ) were excluded. Otherwise, values were imputed.

HOW TO HELP STUDENT LEARN AT HOME: In table 2, the data for whether the school provided information on this topic are based on a recode of the variable FSSPHOME (PE5d) in the PFI parent questionnaire. Responses indicating that the school provided this information "very well," "just okay," or "not very well" (FSSPHOME $=1,2$, or 3 ) were included. Responses indicating that the school "doesn't do it at all" (FSSPHOME $=4$ ) were excluded. Otherwise, values were imputed.

COMMUNITY SERVICES: In table 2, the data for whether the school provided information on this topic are based on a recode of the variable FSSPSERV (PE5e) in the PFI parent questionnaire. Responses indicating that the school provided this information "very well," "just okay," or "not very well" (FSSPSERV = 1,2 , or 3) were included. Responses indicating that the school "doesn't do it at all" (FSSPSERV $=4$ ) were excluded. Otherwise, values were imputed.

HOW TO HELP WITH HOMEWORK: In table 2, the data for whether the school provided information on this topic are based on a recode of the variable FSSPHW (PE5f) in the PFI parent questionnaire. Responses indicating that the school provided this information "very well," "just okay," or "not very well" (FSSPHW $=1,2$, or 3 ) were included. Responses indicating that the school "doesn't do it at all" $($ FSSPHW $=4)$ were excluded. Otherwise, values were imputed.

WHY STUDENT IS PLACED IN PARTICULAR GROUPS OR CLASSES: In table 2, the data for whether the school provided information on this topic are based on a recode of the variable FSSPCOUR (PE5g) in the PFI parent questionnaire. Responses indicating that the school provided this information "very
well," "just okay," or "not very well" (FSSPCOUR $=1,2$, or 3 ) were included. Responses indicating that the school "doesn't do it at all" ( $F S S P C O U R=4$ ) were excluded. Otherwise, values were imputed.

HOW TO HELP STUDENT PLAN FOR COLLEGE: In table 2, the data for whether the school provided information on this topic are based on a recode of the variable FSSPCOLL (PE5h) in the PFI parent questionnaire. Responses indicating that the school provided this information "very well," "just okay," or "not very well" (FSSPCOLL $=1,2$, or 3 ) were included. Responses indicating that the school "doesn't do it at all" ( $F S S P C O L L=4$ ) were excluded. Otherwise, values were imputed.

HOW TO HELP STUDENT PLAN FOR WORK: In table 2, the data for whether the school provided information on this topic are based on a recode of the variable FSSPWORK (PE5i) in the PFI parent questionnaire. Responses indicating that the school provided this information "very well," "just okay," or "not very well" (FSSPWORK $=1,2$, or 3 ) were included. Responses indicating that the school "doesn't do it at all" (FSSPWORK $=4$ ) were excluded. Otherwise, values were imputed.

## STUDENT EXPERIENCES IN SCHOOL

STUDENT PARTICIPATED IN SCHOOL ACTIVITIES (FOSCHACT): The data for FOSCHACT are taken directly from the PFI parent questionnaire (PG10) when available. Otherwise, they were imputed.

TEACHER OR SCHOOL CONTACTED PARENT ABOUT BEHAVIOR PROBLEMS (SEBEHAVR): The data for FSMEETNG are taken directly from the PFI parent questionnaire (PD4) when available. Otherwise, they were imputed.

TEACHER OR SCHOOL CONTACTED PARENT ABOUT SCHOOLWORK PROBLEMS (SESCHLWR): The data for FSMEETNG are taken directly from the PFI parent questionnaire (PD5) when available. Otherwise, they were imputed.

STUDENT GRADES OR MARKS: Parents were asked whether overall, across all subjects, the student got mostly A's, mostly B's, mostly C's, mostly D's or lower, or whether the student's school did not give those grades (SEGRADES, PD2). If the student's school did not give letter grades (e.g., A, B, C), they were asked whether the parent would describe the student's work at school as excellent, above average, average, below average, or failing (SEGRADEQ, PD3). The two questions about grades or marks were combined for the variable about student grades or marks. If data were missing, they were imputed. The values for this variable are: 1) Mostly A's or excellent; 2) Mostly B's or above average; 3) Mostly C's or average; and 4) Mostly D's or lower, or below average or failing.

## PARTICIPATION IN SCHOOL ACTIVITIES BY PARENT OR OTHER HOUSEHOLD MEMBER

ATTENDED A GENERAL SCHOOL MEETING (FSMEETNG): The data for FSMEETNG are taken directly from the PFI parent questionnaire (PE1a) when available. Otherwise, they were imputed.

ATTENDED REGULARLY-SCHEDULED PARENT-TEACHER CONFERENCE (FSATCNFN): The data for FSATCNFN are taken directly from the PFI parent questionnaire (PE1b) when available. Otherwise, they were imputed.

ATTENDED A SCHOOL OR CLASS EVENT (FSSPORT): The data for FSSPORT are taken directly from the PFI parent questionnaire (PE1c) when available. Otherwise, they were imputed.

ACTED AS VOLUNTEER OR SERVED ON SCHOOL COMMITTEE (FSVOLNTR): The data for FSVOLNTR are taken directly from the PFI parent questionnaire (PE1d) when available. Otherwise, they were imputed.

PARTICIPATED IN SCHOOL FUNDRAISING (FSFUNDRS): The data for FSFUNDRS are taken directly from the PFI parent questionnaire (PE1f) when available. Otherwise, they were imputed.

FREQUENCY STUDENT DOES HOMEWORK: This variable was constructed from a question in the PFI parent questionnaire (FHHOME, PF1) that asked about how frequently the student did homework. Students who never did homework and students to whom no homework was given were excluded. If data were missing, they were imputed. Values for the variable indicate whether the student was reported by parents to do homework: 1) less than once a week; 2) 1 to 2 days a week; 3) 3 to 4 days a week; or 4) 5 or more days a week.

NUMBER HOURS STUDENT DOES HOMEWORK: This variable was constructed from a question in the PFI parent questionnaire (FHWKHRS, PF2) that asked parents how many hours their children spent on homework outside of school during an "average" week. If data were missing, they were imputed. Hours were categorized into the following: 1) less than an hour but not zero; 2) 1 to 2 hours per week; 3 ) 3 to 4 hours per week; 4) 5 to 6 hours per week; and 5) 7 or more hours per week.

PLACE IN HOME SET ASIDE FOR HOMEWORK (FHPLACE): The data for this variable were taken directly from FHPLACE (PF4) in the PFI parent questionnaire when available. Otherwise, they were imputed.

ADULT IN HOUSEHOLD CHECKS THAT HOMEWORK IS DONE (FHCHECK): The data for this variable were taken directly from FHCHECK (PF5) in the PFI parent questionnaire when available. Otherwise, they were imputed.

NUMBER OF DAYS PER WEEK PERSONS INSIDE OR OUTSIDE HOUSEHOLD HELPED WITH HOMEWORK: The data for this variable were constructed from FHHELP (PF7) indicating how often someone in the household helped with homework, FHHOME (PF1) indicating how frequently the student had homework, and FHMOMH (PF6a), FHDADH (PF6b), FHSIBH (PF6c), FHHHADLH (PF6d), and FHNHADLH (PF6e) that asked if various persons helped the student with homework either at home or somewhere else during this school year. If FHHOME indicated that the student never did homework or that no homework was given to the student, the case was excluded. If the student had homework (FHHOME) "less than once a week," " 1 to 2 days a week," " 3 to 4 days a week," or " 5 or more days a week," but no help was given by the mother, father, sibling, or other person inside or outside the household (the items in PF6a-e, FHMOMH, FHDADH, FHSIBH, FHHHADLH, and FHNHADLH $=2$ (no help)), the value for the recoded variable was set to indicate that no help was given. Otherwise, the value was set to the value for FHHELP, which indicated how often during this school year the respondent, or any of the people indicated in PF6a-e (the mother, father, etc), helped the child with (his/her) homework. If questionnaire data were not available, the data were imputed.

PARENT OR OTHER FAMILY MEMBER READ TO STUDENT IN PAST WEEK (FOREADTO): The data for FOREADTO are taken directly from the PFI parent questionnaire (PG1) when available. Otherwise, they were imputed.

## HOME ACTIVITIES WITH STUDENT IN THE PAST WEEK

TOLD STUDENT STORY (FOSTORY): The data for FOSTORY are taken directly from the PFI parent questionnaire (PG2a) when available. Otherwise, they were imputed.

DID ARTS AND CRAFTS (FOCRAFTS): The data for FOCRAFTS are taken directly from the PFI parent questionnaire (PG2b) when available. Otherwise, they were imputed.

PLAYED SPORTS, ACTIVE GAMES, OR EXCERCISED (FOSPORTS): The data for FOSPORTS are taken directly from the PFI parent questionnaire (PG2c for students in grades K through 5; PG3b for students in grades 6 through 12) when available. Otherwise, they were imputed.

INVOLVED STUDENT IN HOUSHOLD CHORES (FOCHORE): The data for FOCHORE are taken directly from the PFI parent questionnaire (PG2d) when available. Otherwise, they were imputed.

WORKED ON PROJECT (FOBUILD): The data for FOBUILD are taken directly from the PFI parent questionnaire (PG2e for students in grades K through 5; PG3a for students in grades 6 through 12) when available. Otherwise, they were imputed.

TALKED ABOUT FAMILY OR ETHNIC HERITAGE (FOHIST): The data for FOHIST are taken directly from the PFI parent questionnaire (PG2f) when available. Otherwise, they were imputed.

PLAYED BOARD GAMES OR DID PUZZLES (FOGAMES): The data for FOGAMES are taken directly from the PFI parent questionnaire (PG2g) when available. Otherwise, they were imputed.

DISCUSSED TIME MANAGEMENT (FORESPON): The data for FORESPON are taken directly from the PFI parent questionnaire (PG3c) when available. Otherwise, they were imputed.

## OUTINGS WITH STUDENT IN THE PAST MONTH

VISITED A LIBRARY (FOLIBRAY): The data for FOLIBRAY are taken directly from the PFI parent questionnaire (PG4a) when available. Otherwise, they were imputed.

GONE TO A PLAY, CONCERT, OR OTHER LIVE SHOW (FOCONCRT): The data for FOCONCRT are taken directly from the PFI parent questionnaire (PG4b) when available. Otherwise, they were imputed.

VISITED AN ART GALLERY, MUSEUM, OR HISTORICAL SITE (FOMUSEUM): The data for FOMUSEUM are taken directly from the PFI parent questionnaire (PG4c) when available. Otherwise, they were imputed.

VISITED A ZOO OR AQUARIUM (FOZOO): The data for FOZOO are taken directly from the PFI parent questionnaire (PG4d) when available. Otherwise, they were imputed.

ATTENDED EVENT SPONSORED BY RELIGIOUS GROUP (FORELIG): The data for FORELIG are taken directly from the PFI parent questionnaire (PG4e) when available. Otherwise, they were imputed.

ATTENDED EVENT SPONSORED BY COMMUNITY OR ETHINIC GROUP (FOCOMMUN): The data for FOCOMMUN are taken directly from the PFI parent questionnaire (PG4f) when available. Otherwise, they were imputed.

ATTENDED ATHLETIC OR SPORTING EVENT (FOSPRTEV): The data for FOSPRTEV are taken directly from the PFI parent questionnaire (PG4g) when available. Otherwise, they were imputed.

## STUDENT EXPERIENCES IN SCHOOL

STUDENT FINDS HIS/HER SCHOOLWORK CHALLENGING (SECHALNG): The data for SECHALNG are taken directly from the PFI parent questionnaire (PD1a) when available. Otherwise, they were imputed.

STUDENT ENJOYS SCHOOL (SEENJOY): The data for SEENJOY are taken directly from the PFI parent questionnaire (PD1b) when available. Otherwise, they were imputed.

MOST STUDENTS AND TEACHERS IN STUDENT'S SCHOOL RESPECT EACH OTHER (SERESPCT): The data for SERESPCT are taken directly from the PFI parent questionnaire (PD1c) when available. Otherwise, they were imputed.

STUDENT'S SCHOOL MAKES IT EASY FOR FAMILY TO BE INVOLVED THERE (SEEASY): The data for SEEASY are taken directly from the PFI parent questionnaire (PD1d) when available. Otherwise, they were imputed.

PARENT EXPECTATIONS FOR STUDENT (SEFUTURE): The data for SEFUTURE are taken directly from the PFI parent questionnaire (PD10) when available. Otherwise, they were imputed.

FAMILY TO HELP PAY FOR STUDENT EDUCATION AFTER SCHOOL (SEFAMPAY): The data for SEFUTURE are taken directly from the PFI parent questionnaire (PD11) when available. Otherwise, they were imputed.

STUDENT PARTICIPATES IN SCHOOL ACTIVITIES (FOSCHACT): The data for SEFUTURE are taken directly from the PFI parent questionnaire (PG10) when available. Otherwise, they were imputed.

## OUT-OF-SCHOOL ACTIVITIES

MUSIC LESSONS (FOMUSCLES): The data for FOMUSCLES are taken directly from the PFI parent questionnaire (PG11a) when available. Otherwise, they were imputed.

RELIGIOUS GROUP (FOCHURCH): The data for SEFUTURE are taken directly from the PFI parent questionnaire (PG11b) when available. Otherwise, they were imputed.

ORGANIZED SPORTS (FOORGSPR): The data for FOMUSCLES are taken directly from the PFI parent questionnaire (PG11c) when available. Otherwise, they were imputed.

SCOUTING (FOSCOUTS): The data for FOMUSCLES are taken directly from the PFI parent questionnaire (PG11d) when available. Otherwise, they were imputed.

EDUCATIONAL PROGRAMS (FOEDUC): The data for FOMUSCLES are taken directly from the PFI parent questionnaire (PG11e) when available. Otherwise, they were imputed.

COLLEGE PREP (FOCOLEXM): The data for FOMUSCLES are taken directly from the PFI parent questionnaire (PG11f) when available. Otherwise, they were imputed.

OTHER (FOOOSACT): The data for FOMUSCLES are taken directly from the PFI parent questionnaire (PG11g) when available. Otherwise, they were imputed.

## PERCENTAGE OF PARENTS REPORTING THAT SCHOOL DID ''VERY WELL'" AT PROVIDING INFORMATION

STUDENT'S PERFORMANCE: In table 12, the data for whether the school provided information on this topic are based on a recode of the variable FSSPPERF (PE5a) in the PFI parent questionnaire. Otherwise, values were imputed. Responses indicating that the school provided this information "very well" (FSSPPERF $=1$ ) were included in the recode.

WHAT CHILDREN OF THE STUDENT'S AGE ARE LIKE: In table 12, the data for whether the school provided information on this topic are based on a recode of the variable FSSPCDEV (PE5b) in the PFI parent questionnaire. Otherwise, values were imputed. Responses indicating that the school provided this information "very well" (FSSPPERF = 1) were included in the recode.

OPPORTUNITIES TO VOLUNTEER: In table 12, the data for whether the school provided information on this topic are based on a recode of the variable FSSPVOLN (PE5c) in the PFI parent questionnaire. Otherwise, values were imputed. Responses indicating that the school provided this information "very well" (FSSPPERF $=1$ ) were included in the recode.

HOW TO HELP STUDENT LEARN AT HOME: In table 12, the data for whether the school provided information on this topic are based on a recode of the variable FSSPHOME (PE5d) in the PFI parent questionnaire. Otherwise, values were imputed. Responses indicating that the school provided this information "very well" (FSSPPERF = 1) were included in the recode.

COMMUNITY SERVICES: In table 12, the data for whether the school provided information on this topic are based on a recode of the variable FSSPSERV (PE5e) in the PFI parent questionnaire. Otherwise, values were imputed. Responses indicating that the school provided this information "very well" (FSSPPERF $=1)$ were included in the recode.

HOW TO HELP WITH HOMEWORK: In table 12, the data for whether the school provided information on this topic are based on a recode of the variable FSSPHW (PE5f) in the PFI parent questionnaire. Otherwise, values were imputed. Responses indicating that the school provided this information "very well" (FSSPPERF = 1) were included in the recode.

WHY STUDENT IS PLACED IN PARTICULAR GROUPS OR CLASSES: In table 12, the data for whether the school provided information on this topic are based on a recode of the variable FSSPCOUR (PE5g) in the PFI parent questionnaire. Otherwise, values were imputed. Responses indicating that the school provided this information "very well" (FSSPPERF $=1$ ) were included in the recode.

HOW TO HELP STUDENT PLAN FOR COLLEGE: In table 12, the data for whether the school provided information on this topic are based on a recode of the variable FSSPCOLL (PE5h) in the PFI parent questionnaire. Otherwise, values were imputed. Responses indicating that the school provided this information "very well" (FSSPPERF $=1$ ) were included in the recode.

HOW TO HELP STUDENT PLAN FOR WORK: In table 12, the data for whether the school provided information on this topic are based on a recode of the variable FSSPWORK (PE5i) in the PFI parent questionnaire. Otherwise, values were imputed. Responses indicating that the school provided this information "very well" (FSSPPERF = 1) were included in the recode.

## PARENT REPORTS OF BEING ''VERY SATISFIED'

WITH THE SCHOOL (FCSCHOOL): The data for FCSCHOOL are taken directly from the PFI parent questionnaire (PE11a) when available. Otherwise, they were imputed.

WITH TEACHERS STUDENT HAD THIS YEAR (FCTEACHR): The data for FCTEACHR are taken directly from the PFI parent questionnaire (PE11b) when available. Otherwise, they were imputed.

WITH ACADEMIC STANDARDS OF THE SCHOOL (FCSTDS): The data for FCSTDS are taken directly from the PFI parent questionnaire (PE11c) when available. Otherwise, they were imputed.

WITH ORDER AND DISCIPLINE AT THE SCHOOL (FCORDER): The data for FCORDER are taken directly from the PFI parent questionnaire (PE11d) when available. Otherwise, they were imputed.

AMOUNT OF HOMEWORK ASSIGNED IS "ABOUT RIGHT" (FHAMOUNT): The data for FHAMOUNT are taken directly from the PFI parent questionnaire (PF3) then available. Otherwise, they were imputed.

AMOUNT OF STANDARDIZED TESTING IS "ABOUT RIGHT" (FESTDTST): The data for FESTDTST are taken directly from the PFI parent questionnaire (PE12) when available. Otherwise, they were imputed.

ENROLLMENT BY SCHOOL CHOICE (SCHOICE): The data for SCHOICE are taken directly from the PFI parent questionnaire (PC2) when available. Otherwise, they were imputed.

FAMILY MOVED TO NEIGHBORHOOD SO STUDENT ELIGIBLE FOR SCHOOL (SNEIGHBR): The data for SNEIGHBR are taken directly from the PFI parent questionnaire (PC8) when available. Otherwise, they were imputed.

DISABILITY AFFECTS STUDENT'S ABILITY TO LEARN (HDAFFECT). The data for HDAFFECT are taken directly from the PFI parent questionnaire (PH9) when available. Otherwise, they were imputed.

## SOURCE OF SERVICES FOR STUDENT'S CONDITION

LOCAL SCHOOL DISTRICT (HDSCHL): The data for HDSCHL are taken directly from the PFI parent questionnaire ( PH 4 a ) when available. Otherwise, they were imputed.

STATE OR LOCAL HEALTH OR SOCIAL SERVICE AGENCY (HDGOVT): The data for HDGOVT are taken directly from the PFI parent questionnaire (PH4b) when available. Otherwise, they were imputed.

DOCTOR, CLINIC, OR OTHER HEALTH CARE PROVIDER (HDDOCTOR): The data for HDDOCTOR are taken directly from the PFI parent questionnaire (PH4c) when available. Otherwise, they were imputed.

OTHER SOURCE (HDSOURCE): The data for HDSOURCE are taken directly from the PFI parent questionnaire ( PH 4 d ) when available. Otherwise, they were imputed.

## INDIVIDUALIZED EDUCATION PROGRAMS (IEP) AND SPECIAL EDUCATION

SERVICES WERE PROVIDED THROUGH AN IEP (HNIFSP): The data for HNIFSP are taken directly from the PFI parent questionnaire (PH5) when available. Otherwise, they were imputed.

FAMILY WORKED WITH SCHOOL TO DEVELOP OR CHANGE IEP (HDDEVIEP): The data for HDDEVIEP are taken directly from the PFI parent questionnaire (PH6) when available. Otherwise, they were imputed.

STUDENT CURRENTLY IN SPECIAL EDUCATION CLASS (HDSPCLED): The data for HDSPCLED are taken directly from the PFI parent questionnaire (PH7) when available. Otherwise, they were imputed.

[^0]:    ${ }^{1}$ The analysis in this report divides private school students into those attending private, church-related and private, not church-related schools. Public school students are divided into those attending public assigned and public chosen schools.

[^1]:    ${ }^{1}$ Students whose parents reported that their classes were "ungraded" were excluded from the analyses of grade level.
    NOTE: Students who were homeschooled were excluded from the table. Detail may not sum to totals because of rounding.
    SOURCE: U.S. Department of Education, National Center for Education Statistics, Parent and Family Involvement in Education Survey of the 2003 National Household Education Surveys Program (PFI-NHES:2003).

[^11]:    See notes at end of table.

[^12]:    ${ }^{1}$ Parents were asked to rate satisfaction (1) "with the school"; (2) "with teachers student had this year"; (3) "with academic standards of the school"; and (4) "with order and discipline at the school." Response options were "very satisfied," "somewhat satisfied," "somewhat dissatisfied," or "very dissatisfied."
    ${ }^{2}$ Response options were "the amount is about right," "it's too much," or "it's too little." This estimate pertains only to the children whose parents reported that their children did homework outside of school.
    ${ }^{3}$ Response options were "doing about the right amount of standardized testing and assessment," "doing too much," or "doing too little."
    ${ }^{4}$ Students whose parents reported that their classes were "ungraded" were excluded from the analyses of grade level.
    NOTE: Students who were homeschooled were excluded from the table. Detail may not sum to totals because of rounding.
