

## **CHAPTER 5**

# **Outcomes of Education**

This chapter contains tables comparing educational attainment and workforce characteristics. The data show labor force participation and income levels of high school dropouts and high school and college graduates. Population characteristics are provided for many of the measures to help provide comparisons among various demographic groups. Tables 381 to 383 contain data from the U.S. Bureau of Labor Statistics on labor force participation, employment, unemployment, and type of occupation by highest level of educational attainment, sex, age, and race/ethnicity. Tables 384 and 385 provide income comparisons by education level and sex. Table 386 provides literacy scores for adults by education level, employment status, and demographic characteristics. Percentages of high school seniors with various characteristics who work different numbers of hours per week are shown in table 387.

Tables 388 and 389, compiled from U.S. Census Bureau data on high school completers and dropouts, show the labor force participation and college enrollment of high school students within the year after they leave school. The tabulations also provide comparative labor force participation and unemployment rates for high school completers and dropouts. Additional information on college enrollment rates by race/ethnicity and sex has been included to help form a more complete picture of high school outcomes. Table 390 provides data on college enrollment and employment among special education students who have left secondary school. Tables 391 to 394 were prepared from the Recent College Graduates and Baccalaureate and Beyond surveys by the National Center for Education Statistics (NCES). These tables provide data on employment outcomes and salaries for college graduates 1 year after graduation. Tables 395 to 397 deal with drug use and life values of high school seniors and young adults.

Statistics related to outcomes of education appear in other sections of the *Digest*. For example, statistics on educational attainment of the entire population are in chapter 1. More detailed data on the numbers of high school and college graduates are contained in chapters 2 and 3. Chapter 3 contains trend data on the percentage of high school completers going to college. Additional data on the income of people by educational attainment may be obtained from the U.S. Census Bureau in the *Current Population Reports*, Series P-60. The U.S. Bureau of Labor Statistics has a series of publications dealing with the educational characteristics of the labor force. Further information on survey methodologies is in Appendix A: Guide to Sources and in the publications cited in the table source notes.

## **Labor Force**

Adults with higher levels of education generally had higher labor force participation rates than adults with less education (table 381 and figure 21). (People participating in the labor force are those employed or actively seeking employment.) Among people 25 to 64 years old, 86 percent of those with a bachelor's or higher degree participated in the labor force in 2007, compared with 76 percent of those who had completed only high school. In comparison, 64 percent of those ages 25 to 64 who had not completed high school were in the labor force. The 2007 labor force participation rate for those ages 25 to 64 who had completed only high school was higher for Whites (77 percent) and Hispanics (79 percent) than for Asians (74 percent) and Blacks (72 percent) (table 381). Among people ages 25 to 64 with a bachelor's or higher degree, the labor force participation rates for Whites, Blacks, and Hispanics (86 to 88 percent) were higher than the rate for Asians (82 percent).

Unemployment rates were generally higher for people with lower levels of educational attainment than for those with higher levels of educational attainment (table 382). (The unemployment rate is the percentage of people in the labor force who are not employed, but made specific efforts to find employment sometime during the prior 4 weeks.) The 2007 unemployment rate for adults (25 years old and over) who had not completed high school was 7.1 percent, compared with 4.4 percent for those who had completed high school and 2.0 percent for those with a bachelor's or higher degree (figure 22). Younger people tended to have higher unemployment rates than did people 25 years old and over (table 382).

The relative difficulties dropouts have in entering the job market are highlighted by comparing their labor force participation rates to those of other youth. Of the 2006–07 high school completers who were not in college in October 2007, 77 percent were in the labor force (employed or looking for work), and 20 percent of those in the labor force were looking for work (table 388). In comparison, 2006–07 high school dropouts participated in the labor force at a lower rate (56 percent) in October 2007 (table 389).

One year after graduating from college in 1999–2000, 87 percent of individuals receiving bachelor's degrees were employed (77 percent full time and 11 percent part time), 6 percent were unemployed, and 6 percent were not in the labor force (table 392).

## Income

Among full-time year-round workers 25 years old and over, the median annual income of males, when adjusted for inflation, increased between 1995 and 1999, but decreased between 1999 and 2007, resulting in a 2007 income that was similar to the 1995 income (table 384). The median annual income for females working full-time year-round rose between 1995 and 2001, and had no consistent trend

between 2001 and 2007, for a net increase of 7 percent for the entire period. Females' incomes remained lower than males' incomes overall, as well as by education level. For example, the median 2007 income for full-time year-round workers with a bachelor's degree was \$62,090 for males and \$45,770 for females. Among people 25 years old and over who had earnings in 2007, median annual earnings were lower for females than for males (\$29,540 vs. \$41,540) (table 385 and figure 24).

†Not applicable.

<sup>1</sup>Prose literacy refers to the knowledge and skills needed to search, comprehend, and use information from continuous texts. Adults at the Below Basic level, rated 0 to 209, range from being nonliterate in English to being able to locate easily identifiable information in short, commonplace prose texts. At the Basic level, rated 210 to 264, adults are able to read and understand information in short, commonplace prose texts. At the Intermediate level, rated 265 to 339, adults are able to read and understand moderately dense, less commonplace prose texts as well as summarize, make simple inferences, determine cause and effect, and recognize the author's purpose. At the Proficient level, rated 340 to 500, adults are able to read lengthy, complex, abstract prose texts as well as synthesize information and make complex inferences.

<sup>2</sup>Document literacy refers to the knowledge and skills needed to search, comprehend, and use information from noncontinuous texts in various formats. Adults at the Below Basic level, rated 0 to 204, range from being nonliterate in English to being able to locate easily identifiable information and follow instructions in simple documents (e.g., charts or forms). At the Basic level, rated 205 to 249, adults are able to read and understand information in simple documents. At the Intermediate level, rated 250 to 334, adults are able to locate information in dense, complex documents and make simple inferences about the information. At the Proficient level, rated 335 to 500, adults are able to integrate, synthesize, and analyze multiple pieces of information located in complex documents.

<sup>3</sup>Quantitative literacy refers to the knowledge and skills required to identify and perform computations, either alone or sequentially, using numbers embedded in printed materials. Adults at the Below Basic level, rated 0 to 234, range from being nonliterate in English to being able to locate numbers and use them to perform simple quantitative operations (primarily addition) when the mathematical information is very concrete and familiar. At the Basic level, rated 235 to 289, adults are able to locate easily identifiable quantitative information and use it to solve simple, one-step problems when the arithmetic operation is specified or easily inferred. At the Intermediate level, rated 290 to 349, adults are able to locate less familiar quantitative information and use it to solve problems when the arithmetic operation is not specified or easily inferred. At the Proficient level, rated 350 to 500, adults are able to locate more abstract quantitative information and use it to solve multistep problems when the arithmetic operations are not easily inferred and the problems are more complex.

NOTE: Adults are defined as people age 16 and older living in households or prisons. Adults who could not be interviewed due to language spoken or cognitive or mental disabilities (3 percent in 2003 and 4 percent in 1992) are excluded from this table. Race categories exclude persons of Hispanic ethnicity. Detail may not sum to totals because of rounding. Standard errors appear in parentheses.

†Not applicable.

#Rounds to zero.

<sup>1</sup>Socioeconomic status (SES) was measured by a composite score of parental education and occupations, and family income.

NOTE: Race categories exclude persons of Hispanic ethnicity. Detail may not sum to totals because of rounding.

<sup>†</sup>Not applicable.<sup>‡</sup>Reporting standards not met.<sup>1</sup>The labor force participation rate is the percentage of persons either employed or seeking employment.<sup>2</sup>The labor force includes all employed persons plus those seeking employment. The unemployment rate is the percentage of persons in the labor force who are not working and who made specific efforts to find employment sometime during the prior 4 weeks.<sup>3</sup>Includes 16- to 24-year-olds who completed high school between October of the previous year and October of the given year.

NOTE: Enrollment data are for October of given year. Data are based on sample surveys of the civilian noninstitutional population. Percentages are only shown when the base is 75,000 or greater. Even though the standard errors are large, smaller estimates are shown to permit users to combine categories in various ways. Totals include race categories not separately shown. Race categories exclude persons of Hispanic ethnicity. Detail may not sum to totals because of rounding. Standard errors appear in parentheses. SOURCE: U.S. Department of Commerce, Census Bureau, Current Population Survey (CPS), October 2005, 2006, and 2007. (This table was prepared August 2008.)

Table 389. Labor force status of high school dropouts, by sex and race/ethnicity: Selected years, 1980 through 2007

| Year, sex, and race or ethnicity | Number of dropouts (in thousands) | Percent of all dropouts | Percentage distribution of population |                                 |                    | Labor force participation rate of dropouts | Dropouts in civilian labor force <sup>1</sup> |                                 |             | Dropouts not in labor force (in thousands) |  |  |

†Not applicable.

‡Reporting standards not met.

<sup>1</sup>The labor force includes all employed persons plus those seeking employment. The labor force participation rate is the percentage of persons either employed or seeking employment. The unemployment rate is the percentage of persons in the labor force who are seeking employment.

<sup>2</sup>Persons 16 to 24 years old who dropped out of school in the 12-month period ending in October of years shown.

<sup>3</sup>Includes persons of Hispanic ethnicity.

NOTE: Data are based on sample surveys of the civilian noninstitutional population. Includes dropouts from any grade, including a small number from elementary and middle schools. Percentages are only shown when the base is 75,000 or greater. Even though the standard errors are large, smaller estimates are shown to permit users to combine categories in various ways. Totals include race categories not separately shown. Race categories exclude persons of Hispanic ethnicity unless otherwise noted. Detail may not sum to totals because of rounding. Standard errors appear in parentheses.

†Not applicable.

!Interpret data with caution.

‡Reporting standards not met.

<sup>1</sup>Includes 2- and 4-year colleges, and vocational/technical schools.

<sup>2</sup>Competitively employed refers to those receiving more than minimum wage and working in an environment where the majority of workers are not disabled.

<sup>3</sup>Includes wages from noncompetitive jobs.

<sup>4</sup>Living independently includes living alone, with a spouse or roommate, in a college dormitory, in Job Corps housing, or in military housing as a service member.

<sup>5</sup>Includes disability categories with less than 30 youths in the sample, which are not shown separately.

<sup>6</sup>Includes deaf and hard of hearing.

NOTE: Data based on students who had been out of secondary school up to 4 years and had attended special or regular schools in the 1999–2000 or 2000–01 school year. Standard errors appear in parentheses.

†Not applicable.

#Rounds to zero.

<sup>1</sup>Columns are not mutually exclusive; bachelor's degree recipients who are currently enrolled could have completed a prior graduate program.

<sup>2</sup>Includes completion of postbaccalaureate certificates.

<sup>3</sup>Only includes respondents who completed a master's, doctor's, or first-professional degree. These graduates could also have left another graduate program without completing or be currently enrolled in another graduate program.

NOTE: Detail may not sum to totals because of rounding.

<sup>1</sup>Most educators work 9- to 10-month contracts.<sup>2</sup>Reported salaries of full-time workers under \$2,600 in 1976, \$4,200 in 1981, \$5,000 in 1985, and \$1,000 in 1994 and 2001 were excluded from the tabulations. Also, those with salaries over \$500,000 in 1994 and 2001 were excluded.

NOTE: Data exclude bachelor's recipients from U.S. Service Academies, deceased graduates, and graduates living at foreign addresses at the time of the survey. Constant dollars based on the Consumer Price Index, prepared by the Bureau of Labor Statistics, U.S. Department of Labor. Standard errors appear in parentheses.

†Not applicable.

<sup>1</sup>Includes other illegal drug use not shown separately.

NOTE: Marijuana includes hashish usage for 1996 and later years. Due to changes in the survey instrument and administration and to improve comparability with new data, estimates for 1982 through 1993 have been adjusted and may differ from those reported in previous years. Data for 1999 have been revised from previously published figures. Data for 1999 and later years were gathered

using Computer Assisted Interviewing (CAI) and may not be directly comparable to previous years. Standard errors appear in parentheses.
