

**2009 Science Assessment Content**

Guided by a new framework, the NAEP science assessment was updated in 2009 to keep the content current with key developments in science, curriculum standards, assessments, and research. The 2009 framework organizes science content into three broad content areas.

**Physical science** includes concepts related to properties and changes of matter, forms of energy, energy transfer and conservation, position and motion of objects, and forces affecting motion.

**Life science** includes concepts related to organization and development, matter and energy transformations, interdependence, heredity and reproduction, and evolution and diversity.

**Earth and space sciences** includes concepts related to objects in the universe, the history of the Earth, properties of Earth materials, tectonics, energy in Earth systems, climate and weather, and biogeochemical cycles.

The 2009 science assessment was composed of 143 questions at grade 4, 162 at grade 8, and 179 at grade 12. Students responded to only a portion of the questions, which included both multiple-choice questions and questions that required a written response.

**Scores at Selected Percentiles**

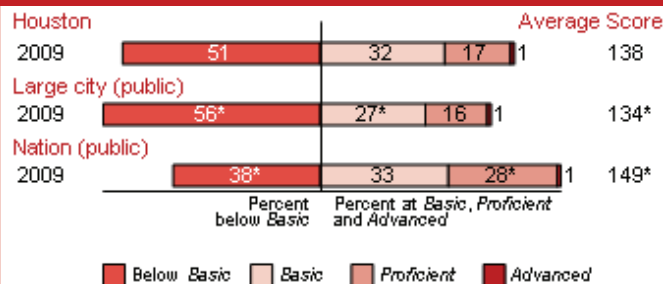

NOTE: Scores at selected percentiles on the NAEP science scale indicate how well students at lower, middle, and higher levels performed.

**Overall Results**

- In 2009, the average score of eighth-grade students in Houston was 138. This was higher than the average score of 134 for public school students in large cities.
- The percentage of students in Houston who performed at or above the NAEP *Proficient* level was 17 percent in 2009. This percentage was not significantly different from large cities (17 percent).
- The percentage of students in Houston who performed at or above the NAEP *Basic* level was 49 percent in 2009. This percentage was greater than large cities (44 percent).

**Achievement-Level Percentages and Average Score Results**

\* Significantly different ( $p < .05$ ) from Houston. Significance tests were performed using unrounded numbers.

NOTE: Detail may not sum to totals because of rounding. Large city (public) includes public schools located in the urbanized areas of cities with populations of 250,000 or more.

**Results for Student Groups in 2009**

Reporting Groups	Percent of students	Avg. score	Percentages at or above		Percent at Advanced
			Basic	Proficient	
<b>Gender</b>					
Male	49	138	51	18	1
Female	51	138	48	17	#
<b>Race/Ethnicity</b>					
White	8	172	86	57	4
Black	29	128	38	9	#
Hispanic	60	137	48	14	#
Asian/Pacific Islander	3	166	76	51	6
American Indian/Alaska Native	#	‡	‡	‡	‡
<b>National School Lunch Program</b>					
Eligible	78	133	44	12	#
Not eligible	22	157	70	36	3

# Rounds to zero.

‡ Reporting standards not met.

NOTE: Detail may not sum to totals because of rounding, and because the "Information not available" category for the National School Lunch Program, which provides free/reduced-price lunches, and the "Unclassified" category for race/ethnicity are not displayed.

**Score Gaps for Student Groups**

- In 2009, male students in Houston had an average score that was not significantly different from female students.
- In 2009, Black students had an average score that was 43 points lower than White students. This performance gap was not significantly different from large cities (39 points).
- In 2009, Hispanic students had an average score that was 35 points lower than White students. This performance gap was not significantly different from large cities (33 points).
- In 2009, students who were eligible for free/reduced-price school lunch, an indicator of low family income, had an average score that was 24 points lower than students who were not eligible for free/reduced-price school lunch. This performance gap was not significantly different from large cities (27 points).

NOTE: Statistical comparisons are calculated on the basis of unrounded scale scores or percentages.
