

The National Assessment of Educational Progress (NAEP) assesses mathematics in five content areas: number sense, properties, and operations; measurement; geometry and spatial sense; data analysis, statistics and probability; and algebra and functions. The NAEP mathematics scale ranges from 0 to 500.

Overall Mathematics Results for Oregon

- In 2003, the average scale score for eighth-grade students in Oregon was 281. This was not found to be significantly different¹ from the average score in 2000 (280), and was higher than the average score in 1990 (271).
- Oregon's average score (281) in 2003 was higher than that of the nation's public schools (276).
- Of the 53 states and jurisdictions² that participated in the 2003 eighth-grade assessment, students' average scale scores in Oregon were higher than those in 20 jurisdictions, not significantly different from those in 24 jurisdictions, and lower than those in 8 jurisdictions.
- The percentage of students in Oregon who performed at or above the NAEP *Proficient* level was 32 percent in 2003. This percentage was not found to be significantly different from 2000 (31 percent), and was greater than that in 1990 (21 percent).

Student Percentage at NAEP Achievement Levels

[†] Accommodations were not permitted for this assessment.

NOTE: The NAEP mathematics scale ranges from 0 to 500, with the achievement levels corresponding to the following points: *Below Basic*, 261 or lower; *Basic*, 262-298; *Proficient*, 299-332; *Advanced*, 333 or above.

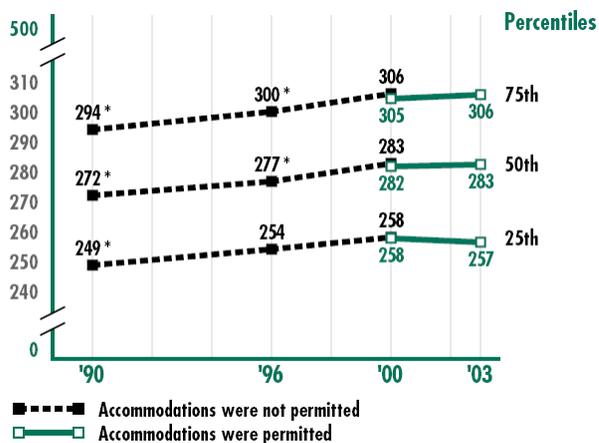

Performance of NAEP Reporting Groups in Oregon

Reporting groups	Percentage of students	Average Score	Percentage of students at			
			Below Basic	Basic	Proficient	Advanced
Male	50	282	29	37	26	8
Female	50	280	30	39	25	6
White	79	284	25	40	28	7
Black	3	265	47	36	15	2
Hispanic	10	258	58	30	10	2
Asian/Pacific Islander	4	292	22	37	24	17
American Indian/Alaska Native	2	263	50	36	12	2
Free/reduced-price school lunch						
Eligible	26	266	45	38	15	2
Not eligible	68	286	24	38	29	8

Average Score Gaps Between Selected Groups

- In 2003, male students in Oregon had an average score that was not found to be significantly different from that of female students. In 1990, there was also no significant difference between the average score of male and female students.
- The sample size was not sufficient to permit a reliable estimate for Black students in Oregon in 1990.
- In 2003, White students had an average score that was higher than that of Hispanic students (26 points). This performance gap was not significantly different from that of 1990 (16 points).
- In 2003, students who were not eligible for free/reduced-price school lunch had an average score that was higher than that of students who were eligible (20 points). This performance gap was not significantly different from that of 1996 (20 points).

Mathematics Scale Scores at Selected Percentiles

An examination of scores at different percentiles on the 0-500 NAEP mathematics scale at each grade indicates how well students at lower, middle, and higher levels of the distribution performed.

The estimate rounds to zero.

--- Reporting standards not met; sample size insufficient to permit a reliable estimate.

* Significantly different from 2003.

↑ Significantly higher than, ↓ lower than 2000.

¹ Comparisons (higher/lower/not different) are based on statistical tests. The .05 level was used for testing statistical significance. Performance comparisons may be affected by differences in exclusion rates for students with disabilities and limited-English-proficient students in the NAEP samples and changes in sample sizes. NAEP sample sizes have increased in 2003 compared to previous years, resulting in smaller detectable differences than in previous assessments.

² "Jurisdictions" includes participating states and other jurisdictions (such as the District of Columbia and the Department of Defense Dependents Schools). NOTE: Detail may not sum to totals because of rounding, and because the "Information not available" category for Free/reduced-price lunch is not displayed. Statistical comparisons are calculated on the basis of unrounded scale scores or percentages.
