

2022/2023 Block Naming Conventions in Data Products and TDW

The Technical Documentation on the Web (TDW) and the Restricted-Use Data Products (Data Products) historically have used their own block naming conventions which may be different between the two products. Data Products block names are identical to their representation in the ETS internal analysis database. The TDW uses block names ending with a number for the indication of trend blocks and consistency across years within TDW.

While there might be some inconsistencies in block naming convention between TDW and the Data Products, using different naming conventions is needed to maintain consistency with TDW and the below crosswalk between two NAEP products is available to help NAEP users better utilize information from all NAEP products.
