1. INTRODUCTION

This manual provides documentation and guidance for users of the public release data files for the Early Childhood Education (ECE) component of the 1991 National Household Education Survey (NHES:91). Information about the purpose of the study, the data collection instruments, the sample design, and data collection and data processing procedures is contained in this manual. More detailed discussions of these topics can be found in National Household Education Survey: 1991, Methodology Report.

The NHES:91 was a random digit dial, telephone survey developed by the National Center for Education Statistics (NCES) and conducted by Westat, Inc. The survey was field tested in 1989 and data for the full-scale study were collected between late January and early May of 1991.

1.1 Background of Study

The National Household Education Survey is the first major attempt by NCES to go beyond its traditional, school-based data collection systems to a household survey. The Center's legislative mandate is to collect and report information on the condition of education in the United States. Historically, NCES has primarily collected data from teachers, students, schools, school districts, and state education agencies in fulfillment of this mandate. The collection of data directly from noninstitutional samples of individuals, particularly household-based data collections, has been limited.

The NHES represents a new initiative for NCES, and holds the promise of greatly enhancing the scope of issues covered by the data collection activities of the Center. A household survey has the potential to provide data needed to address many current issues in education, such as dropping out of school, preprimary education, access to postsecondary education, adult and continuing education, the status of former teachers, extra-school learning, and home-based education.

1.2 Components of NHES:91

There were two general components of the NHES:91. The first of these was the Early Childhood Education (ECE) component, concerned with the experiences of 3- to 8-year-old children. The second component was a large-scale field test which concerned participation
in adult education among persons 16 years of age and older. The following sections provide overviews of each of these two components.

**Early Childhood Education Survey**

The early childhood experiences of children have been shown to have a strong influence on their later academic achievement and persistence, but limited national information was available on these experiences. The NHES:91 ECE component provides nationally representative data on these early experiences. In addition, the survey provides data that will help in tracking progress towards meeting the National Goals for Education, one of which is that “by the year 2000, all children in America will start school ready to learn.” Repeated administrations of the ECE component will permit observation of changes in early childhood experiences.

The ECE component of the NHES:91 takes a broad approach. This component was designed to collect information on children's experiences in a wide range of settings, including their homes, child care arrangements, early childhood education programs, and schools. In addition, the range of experiences covered in the survey is broad, and includes cognitive activities (e.g., reading, learning letters, words, and numbers), developmental activities (e.g., singing songs, arts and crafts), and entertainment activities (e.g., games and sports, television viewing, attendance at movies, plays, concerts). This broad approach permits analysis of the variety of experiences that children have as well as the types of experiences, both of which may be important determinants of school readiness and success.

The NCES:91 ECE survey is a source of information on the following topics:

- Child care and early childhood program experiences;
- Kindergarten and primary school entry;
- Retention in early grades;
- Parental involvement in center-based programs and school;
- The educational environment in the home; and
- Household and family characteristics.
Adult Education Survey

The second component of the NHES:91 was designed to measure participation in adult education activities, to describe these activities, to provide data on the characteristics of participants and nonparticipants, and to determine why some adults participate while others do not. Another of the National Goals for Education is that "by the year 2000, every adult American will be literate and possess the knowledge and skills necessary to compete in a global economy." The AE component provides much information relative to this goal.

The Adult Education (AE) component of the NHES:91 incorporated and expanded upon the kinds of data that were collected in previous surveys on adult education designed by NCES and conducted by the Bureau of the Census. A broad definition of adult education was used. It includes persons enrolled full-time or part-time in a college or vocational or occupational program, those taking continuing education or non-credit courses, correspondence courses, and tutoring, as well as those taking courses or participating in other educational activities provided by employers, community groups, and other providers. The AE survey covered the following topics:

- Participation in adult education activities in the past year, the past three years, and ever;
- Characteristics of adult education courses or activities, including: course title, basic skills and training content, degree requirement fulfillment, sponsor, employer involvement, payment source, and others;
- Perceived benefits to participation in adult education of both participants and nonparticipants;
- Perceived barriers to participation in adult education of both part-time participants and nonparticipants;
- Background characteristics of participants and nonparticipants.
1.3 Overview of Design

The NHES:91 was developed to provide reliable estimates for each of the two different sectors of education policy interest described above. The inclusion of two survey topics made the overall survey more cost effective, thus allowing for larger sample sizes that lead to more precise estimates. This strategy was key to the NHES design. By including more than one topic within the framework of a single survey, the screening of households to find those eligible for the study could be partitioned over the component surveys.

Another general feature of the NHES was developed in response to concerns about the demands placed upon the respondents to surveys. With the introduction of multiple surveys within a single framework came the possibility of increasing the response burden on the members of the sampled households. It was possible that the same household member could be sampled for more than one interview and/or that more than one household member could be sampled. In the NHES:91, parents of children could respond for more than one child and could also be sampled for the AE survey. To help alleviate this response burden and to improve the response rate for the component surveys, additional sampling was used for the AE component. Households with 2- to 9-year-old children, selected with certainty for the ECE survey, were given a smaller chance of being selected for the AE survey. The objective was to reduce the chance of multiple interviews within a household and still obtain the required information in a cost effective manner.

Even though sampling methods were used to reduce the chances of selecting the same household for more than one survey, the administration time of the interview was considered to be a critical factor in obtaining high response rates and reliable estimates. The number of items included in the NHES:91 was limited in order to help improve response rates and reduce the demands made on survey respondents.

Because of these requirements and the need to produce estimates of high quality in a timely manner, the NHES:91 was conducted using computer assisted telephone interviewing (CATI) technology. Some of the advantages of CATI for the NHES:91 included improved project administration, on-line sampling and eligibility checks, scheduling of interviews according to a priority scheme to improve response rates, and managing data quality by controlling skip patterns and checking items for logic on-line.

Three different interviews were included in the NHES:91. These instruments were the Screener, the Early Childhood Education (ECE) interview, and the Adult Education (AE) interview. The three instruments were programmed so that the appropriate items appeared on the
interviewer's computer screen depending upon the respondent's answer to each query. The Screener and ECE instruments are discussed in detail in Chapter 2. A separate Data User's Manual has been prepared for the AE component.

Flow of the Interviews

Figure 1-1 shows the flow of the NHES:91 interviews. Each household contact began with a Screener. In this interview, basic household information was obtained and sampling of members for extended interviews was conducted.

If the household contained any members between 2 and 9 years old, then an extended ECE interview was conducted with the parent or guardian most knowledgeable about each child's care and education. ECE interviews were scheduled for each child in the household who was in the eligible age range; whenever possible, all interviews with household members were conducted during the same call as the Screener, starting with any extended interviews with the Screener respondent.

The sampling of households for AE Screening and individual adults for interviews was accomplished using the information collected in the Screener. If any adult was sampled, then an extended AE interview was scheduled for that person. The interview could be conducted with the sampled adult only; and no other person could respond for the sampled person. It was possible that more than one adult could be selected for an extended AE interview within a given household.

Contents of Manual

The chapters that follow provide additional information about the survey instruments (Chapter 2), the sample design and estimation procedures (Chapter 3), data collection (Chapter 4), data preparation (Chapter 5), and the use of the ECE data files and code book (Chapter 6). Anomalies identified in the data are highlighted in Chapter 7. The appendices provide copies of the questionnaires, listings of variables, listings of SAS and SPSS-X control cards, a guide to using SAS and SPSS-X, the SAS code for composite variables, and the codebooks for the ECE data files.

2. DESCRIPTION OF DATA COLLECTION INSTRUMENTS

The sections that follow describe the instruments used to collect data for the Early Childhood Education (ECE) component of the NHES:91. Included are descriptions of the Screener and ECE Interviews. Appendix A contains copies of the questionnaires.

2.1 The NHES:91 Screener

The purposes of the NHES:91 Screener were to identify those households that were eligible for the study; to collect information required for sampling adult household members for the Adult Education survey in those households sampled for the AE component; and to collect a limited set of household characteristics. The Screener was designed to accomplish these tasks efficiently, placing minimum burden on the respondent (Figure 2-1).

The Screener questionnaire was designed to flow smoothly through the following steps:

- Explain the purpose of the call;
- Verify that the phone number was dialed correctly and that the number reached was used for residential, or both residential and business, purposes;
- Verify that the Screener respondent was an adult member of the household at least 16 years old;
- Obtain basic identifying information about each 2- to 9-year-old in the household;
- Obtain identifying information and educational participation information for persons 16 and older (in about one-third of all households); and
- Obtain basic information about all eligible households.¹

¹An eligible household is a household with at least one resident who was selected for an extended interview.
Figure 2-1. Flow of NHES:91 screener

1. **Identify HH**

2. **Any 2- to 9-year olds?**
   - yes: **Enumerate children and identify parent respondents**
   - no: **Collect info on first adult**

3. **Collect info on first adult**

4. **HH sampled for adult ed?**
   - no: **Terminate**
   - yes:
     - yes: **Enumerate adults and collected participation information**
     - no: **Terminate**

5. **Any ECE interviews?**
   - yes: **Collect household characteristics**
   - no: **Completed Screener**
Additional information on each of these sections of the NHES:91 Screener follows.

The first series of questions in the Screener was used to determine that the correct telephone number was reached, that it belonged to a household, and that the person on the telephone was eligible to answer the questions. If the correct number was not reached, or was used for business only, the call was terminated. Numbers used for household use only, or for business and household use, continued with the survey. If the person who answered the telephone was not a household member or was a household member under 16 years of age, an appropriate Screener respondent was requested.

**Early Childhood Screening.** The next series of Screener items concerned children in the household. First, a screening question to determine whether any 2- to 9-year-old children lived in the household was asked. If so, the childhood section of the Screener continued. The items asked about each 2- to 9-year-old were kept to a minimum, and included age, gender, race/ethnicity, name, and the name and relationship of the knowledgeable parent or guardian. The broader age range was used to ensure that children of the appropriate age were captured despite some expected reporting error among some Screener respondents. If there were no children in the eligible age range, and the household was not sampled for AE screening, the Screener interview was terminated at this point.

**Adult Education Screening.** A sample of households was selected for AE screening. The AE screening questions were also kept to a minimum, in order to keep the response burden as low as possible. For each adult in the household, a small set of characteristics was collected (age, gender, race/ethnicity, name). Then, a series of questions was used to determine the current AE participation status of each adult. For those sampled adults who were living away at school, contact information was requested. This permitted calls to sampled students at their school telephone numbers for interviews.

**Household Characteristics.** The final section of the Screener collected data on a variety of household characteristics including the number of persons living in the household, county, home type, household income, and the presence of additional telephone numbers. These were collected only from households in which at least one child or adult was sampled for an extended interview.

### 2.2 Early Childhood Education Interviews

There were two basic types of Early Childhood Education (ECE) interviews in the NHES:91. The instruments were designed to address two specific populations of 3- to 8-year-old children: those who had not yet enrolled in primary school, and those who were currently
enrolled in primary school (or were 6 years of age or older and receiving home schooling or education in alternative programs). While the instruments had some items in common, they are treated largely as separate questionnaires in this section.

Before discussing the specific items, the overall structure of the ECE interviews is presented. Figure 2-2 shows this structure, and demonstrates the differences between the two groups of children that were of interest in this survey. Because there was considerable interest in the nonparental care/education experiences of kindergarten students, the preprimary instrument was considered more appropriate for them than the primary school instrument.

- For all children, the month and year of birth, current school enrollment status, household composition, and parent marital status were collected. At this point, the paths of questioning differed for the two child populations, as follows:

- **Preprimary Interview.** The parents of younger children were asked about current home-based child care, daycare center participation, and nursery school or prekindergarten enrollment for their child. Detailed information on center-based programs was collected, including child-staff ratio, presence of an educational program, and parent involvement. This was followed by items concerning planned or current kindergarten enrollment, and delayed kindergarten entry.

- **Primary School Interview.** The parents of primary school children were asked about when their children started school, their kindergarten enrollment, their experiences in their current grade, any retention in grade, parent involvement including contact with the child's teacher, discussion of school experiences with the child, and helping with or checking the child's homework. Information on nonparental care/education prior to first grade entry was also collected.

Following the collection of the above information, items were asked about the home environment, the child's health, and parent characteristics. While the home environment questions differed slightly for the Preprimary and Primary School Interviews, the health and parent items were the same. They included health risk factors including low birth weight and handicapping conditions, parent education and parental employment status.
Figure 2-2. NHES:91 early childhood education interview

**Introductory Questions**
- Child's month/year of birth
- Household composition
- Parents' marital status
- Current enrollment status

**Preprimary Interview**
- Home-based care arrangements
- Daycare center participation
- Nursery school/preK enrollment
- Parent involvement in daycare/nursery
- Planned/current kindergarten enrollment
- Delayed school entry
- Home environment/activities

**Primary School Interview**
- Kindergarten enrollment/delayed entry
- Retention in early grades
- Characteristics of current school/grade
- Parent involvement in school
- Nonparental care/education history
- Home environment/activities

**Child Health and Parent Questions**
- Child's birthweight/handicap
- Mother's age and language
- Parent education
- Parent labor force status
The following sections provide brief descriptions of each major portion of the interviews.

**Early Childhood Introductory Questions.** The initial items in the instrument were collected for each of the eligible children: month and year of birth, household composition, parents’ marital status, and current enrollment status. The month and year of birth were used to eliminate children who were under 3 years old on January 1. Also, children who were over 8 years old on January 1 and enrolled in third grade or higher were eliminated. The household composition items were used to determine skip patterns and wording for later items concerning parents or guardians. The current grade was used to determine whether the Preprimary or Primary School path should be taken.

**Preprimary Interview**

**Early Childhood Programs.** The first section of the Preprimary Interview concerned current nonparental care/education arrangements in which the child participated or was enrolled. This provided information on the various environments to which children were exposed, the extent to which they participated in organized programs, and some of the characteristics of the daycare programs, nursery schools, and prekindergartens in which children spent time. There were four types of arrangements included in the survey; 1) child care by relatives, 2) child care by nonrelatives, 3) attendance at daycare centers, and 4) attendance in nursery schools, prekindergarten, or Head Start programs.

Distinctions between center-based programs such as daycare centers, nursery schools, and prekindergartens are often difficult to make. This is due to the ambiguity of the names and terms used to describe such programs. Some double counting is believed to have resulted from this ambiguity, and is discussed in Chapter 7 on data anomalies.

The series of questions on child care, daycare center, and nursery school/prekindergarten arrangements were followed by a final set of questions designed to ensure that all relevant arrangements for the child had been included. It was expected that, in some cases, an arrangement or program would be left out because the name of the program did not match any of the generic terms used in the questionnaire. If the respondent did not include a program in the earlier series, this final series provided an opportunity to capture it.

**Kindergarten.** The next series of items concerned the actual and planned enrollment of children in kindergarten. Items concerning expectations for enrollment in kindergarten were asked of parents whose children had not yet entered kindergarten. Actual enrollment information was asked of parents whose children were in kindergarten. Items on two
important educational issues were included in this series: delayed entry into kindergarten -- that is, parents waiting to enroll their children until they are older, and kindergarten retention -- that is, children being held back in kindergarten.

**Home Environment.** The home environment items for both the Preprimary Interview and the Primary School Interview were drawn from various extant questionnaires, and modified through pretesting and focus group interviews. As a group, these items provided a description of the child's home environment in terms of the child's variety of experiences, parent-child interaction, developmental activities, and cognitive stimulation.

**Health Risk Factors.** The next brief section collected information on two aspects of the child's health: low birth weight and handicapping condition. Both of these are risk factors that could affect a child's development and can have a negative impact on school performance.

**Parent Characteristics.** The final section of the Preprimary Interview collected background information on the child's parents or guardians. The section was separated into questions about the mother or female guardian and the father or male guardian. Items about the mother included: her age, the age at which she first became a parent or guardian, her first and current languages, education, and employment status. Items about the child's father included education and employment status. These subsections were asked only if the relevant parent (or guardian) was a member of the household. When multiple interviews were conducted with the same parent in a household, this series was asked only once. See Chapter 7 for a discussion of a small number of data anomalies arising from this approach.

**Primary School Interview**

The Primary School Interview had a different focus from the Preprimary Interview in that it focused more on school experiences in primary grades rather than on nonparental care/education prior to first grade. However, it was also concerned with the child's educational experiences and environment and with parental involvement. In addition, the Primary School Interview provided an opportunity to look at two preliminary outcome measures of children's success in school: academic performance, reported by parents in terms of how their child was

---

2 At NCES' request, a subset of these items was included in the 1990 October Education Supplement to the Current Population Survey.
School History. The first section of the Primary School Interview flowed from the grade-in-school question that ended the "early childhood introductory questions" discussed above. This series of items was essential to understanding the paths that children take during their first few years of school. The series provided the items necessary to examine delayed entry into kindergarten as well as the retention of children in kindergarten and the early grades.

Current Year Experiences. Information on the child's current grade and school was collected next. Many of the items in this section focused on parent involvement in terms of teacher contact, discussion of school activities with the child, and attention to the child's homework. This section also included measures of early school performance or problems.

Early Childhood Programs. Information on the nonparental care/education in which the child participated before starting first grade was also included in the Primary School Interview. This section encompassed the same types of programs included in the Preprimary Interview; however, the detailed information on each activity/program requested in the Preprimary Interview was not included. These items provided the opportunity to examine the relationship between preprimary participation in various types of programs and early school performance. It also provided information on the nonparental care/education histories that children bring with them into the first grade.

Home Environment. As noted before, the home environment items in the Primary School Interview were very similar to those used in the Preprimary Interview. A few adaptations were made due to age/ability differences in the groups. However, the topics -- cognitive stimulation, variety of experiences, and the role of the parent as teacher -- were essentially the same.

Health Risk Factors. The health risk factors -- low birth weight and handicapping condition -- were the same items as those in the Preprimary Interview.

Parental Characteristics. The items used to collect background information on the parents or guardians of primary school children were the same as those in the Preprimary Interview.
3. SAMPLE DESIGN AND IMPLEMENTATION

This chapter describes the sample design for the NHES:91, including a number of special features of the design. Also presented are the procedures for weighting to national estimates, imputation for missing values on selected variables, and variance estimation.

3.1 Sampling Households

The NHES:91 was designed to provide reliable estimates of the number and characteristics of the early childhood education experiences of 3- to 8-year-olds and the educational experiences of adults. These component surveys of the NHES:91 were conducted entirely by sampling, contacting, and interviewing persons by telephone.

The method of sampling used in the NHES:91 is one type of the class of methods called random digit dialing (RDD). The basic concept of RDD procedures is that every residential telephone number has a chance of being sampled through a random sampling mechanism. Mitofsky and Waksberg\(^1\) developed a RDD sampling procedure that yielded a sample in which each household had an approximately equal probability of selection and which significantly reduced the number of telephone calls that had to be made relative to previously used RDD procedures. A variant of the basic Mitofsky-Waksberg procedure was used in the NHES:91. The modification will be described after the Mitofsky-Waksberg method is presented.

The basic method of sampling for RDD is quite simple. A list or frame of all existing telephone area codes and prefix numbers (the first three digits of the telephone number) in the 50 States and the District of Columbia was determined based on data tapes obtained from AT&T. All possible two-digit numbers were added to these numbers to form a complete list of all the possible first 8 digits of the 10 digits of phone numbers in the U.S. These eight-digit numbers were treated as Primary Sampling Units (PSU’s) or clusters.

A random selection was made from the list of PSU’s and a random two-digit number was added to the sampled number to create a full 10 digit telephone number. This 10 digit number is called a prime number. The prime number was then dialed to determine if it was residential. If the number was residential, then the PSU was retained in the sample and other

The sample numbers were generated from the cluster. If the prime number was not residential, then the PSU was rejected and no further calls were made within that PSU.

The sampling procedure was repeated until a sample of \( m \) residential PSU's were obtained. For the NHES:91, an oversampling method was used so that the probability of selection for the PSU's was not exactly as described above. The oversampling method and its implications are discussed below.

The next step of the sampling procedure was the sampling of additional telephone numbers from the retained residential PSU's. The additional telephone numbers were generated by adding random two-digit numbers to the eight-digit PSU number. In the basic Mitofsky-Waksberg procedure, as many additional telephone numbers are generated as needed to achieve the desired number of completed interviews (\( k+1 \)) within each PSU. Thus, the total number of completed interviews is \( m(k+1) \). This procedure results in a sample which is approximately self-weighting (i.e., equal weights).

The sample is clustered within PSU's in order to effect a significant cost savings. Waksberg showed that the number of telephone numbers that need to be dialed is less than 50 percent of the number that would be needed if all numbers were dialed at random.

The basic Mitofsky-Waksberg procedure is sequential. It is not possible to determine in advance how many telephone numbers are needed in each cluster to achieve a sample of \( k+1 \) households. A new determination must be made after each telephone call to the PSU. This procedure can be awkward to implement, especially when the survey must be conducted within a limited amount of time, as was the case with the NHES:91.

An alternative RDD sampling method was used in the NHES:91 to help avoid these difficult operational issues. The variant of the Mitofsky-Waksberg procedure used in the NHES:91 required the use of a fixed number (\( k+1 \)) of telephone numbers per cluster rather than a fixed number of completed interviews. The modified method produces a probability sample, but it is not self-weighting. The statistical properties of the modified Waksberg method are described in detail by Brick and Waksberg.

The number of households with completed screening interviews targeted for the NHES:91 was 60,000 (\( m(k+1) \)). This sample size was determined by the sample size requirements of the ECE component of NHES:91, which had the sample size requirements for

the rarest population in the study. A sample of 4,000 clusters \((m)\) of telephone numbers were selected, so that approximately 15 completed Screeners \((k+1)\) were planned per cluster.

Since not every telephone number within a sampled cluster yields a household, and not every household is willing to participate in the study, a sample of 120,000 telephone numbers was generated for NHES:91 with 30 numbers selected randomly from each sample cluster. The 120,000 numbers were selected based on assumptions of a within-cluster residency rate of 60 to 65 percent and an 80 percent participation rate (the participation rate is the percent of households willing to answer the data items for the Screener). Therefore, the targeted number of completed Screeners was 60,000 \((120,000 \times .625 \times .80)\).

These assumptions proved to be very reliable. The achieved within-cluster residency rate was 60 percent and the participation rate was 81 percent. The number of participating residential households was 60,314. The specific outcomes from the survey operations are given in detail in a later section.

The next step in the sampling process was the selection of members of the sampled households for extended ECE interviews and AE interviews. Before describing the sampling of the 3- to 8-year-olds for the ECE survey, the oversampling of clusters is discussed.

**Oversampling Households for Blacks and Hispanics**

One of the goals of the NHES:91 was to produce reliable estimates of the characteristics of children's early educational experiences and adults' educational activities for totals and for subdomains defined by race and ethnicity. In a sample of 60,000 households in which every person has the same probability of being included, the sample size is not large enough to produce reliable estimates of some characteristics of blacks or Hispanics. Therefore, blacks and Hispanics must be oversampled to increase the reliability of estimates for these domains.

In the 1989 Field Test the use of a particular method of oversampling blacks and Hispanics was examined. This method was successful in reducing the variances of the estimates of blacks and Hispanics by approximately 20 to 30 percent over the range of statistics examined. The decrease in precision for estimates of the groups that were not oversampled and for estimates of totals were modest, about 5 to 15 percent. Because of the success of the Field Test methodology, the same basic procedure was used for the NHES:91.

A data tape containing the 1980 census characteristics for telephone exchanges and updates of the census items was purchased from the Donnelley Marketing Information Services
in the summer of 1990. The most current list of all telephone exchanges was obtained from AT&T in November 1990, as discussed above. A sample of 40,000 clusters was selected randomly from the AT&T tape and matched against the clusters on the Donnelley file. The sample was drawn to avoid the computational costs associated with matching the entire AT&T file. The results of this matching operation are given below, where high concentration minority is defined as having more than 10 percent of the population black or more than 10 percent Hispanic:

<table>
<thead>
<tr>
<th>Not found on Donnelley</th>
<th>Classified as low minority concentration</th>
<th>Classified as high minority concentration</th>
</tr>
</thead>
<tbody>
<tr>
<td>6,128</td>
<td>21,695</td>
<td>12,177</td>
</tr>
</tbody>
</table>

Total 40,000

Those clusters not found on the Donnelley tape were classified as low minority concentration for sampling purposes.

Telephone exchanges with high minority concentrations were then oversampled at a rate of 2 to 1. The definition of high minority concentration and the oversampling rate were established based on research which looked at seven possible sampling schemes using 10 percent and 20 percent cutoffs for high minority concentrations and oversampling rates of two and three times the basic rate. The research balanced the increases in the sample size for blacks and Hispanics, against the losses in precision associated with the use of differential sampling rates.

A sample of 1,867 high minority residential clusters and 2,133 low minority residential clusters was targeted. Using a sampling rate for the high minority concentration clusters that was twice the rate of the other clusters, 9,335 high minority clusters and 12,065 low minority clusters were randomly selected from the 40,000 clusters sampled from the AT&T tape. Of the 9,335 high minority clusters, 2,638 were identified as residential (28 percent). Of the 12,065 low minority clusters, 2,155 were identified as residential (18 percent). The sample clusters were randomly selected from the clusters identified as residential to achieve the targeted numbers.

The oversampling procedure was done by exchange or cluster rather than being restricted to black and Hispanic households, i.e., the sampling rate within a cluster was constant. It would have been possible to subsample nonblack and nonHispanic households in high minority clusters to create a self-weighting sample for persons who are not black or Hispanic.

This procedure would not have been efficient for the ECE component, because it would have involved dropping screened households, and the screening to find households with 3- to 8-year-olds was the largest component of the data collection costs.

3.2 Sampling Within Households for the Early Childhood Education Survey

All 3- to 8-year-olds in sampled households were included in the ECE survey; there was no subsampling of this population. The household member responding to the Screener interview was asked to give the age of each child between the ages of 2 and 9 years, inclusive. The enumeration of 2- and 9-year-olds was conducted to insure that nearly all children who were eligible for the extended interviews were identified, even if a rounding error was made in reporting the age of the child. One of the first items in the extended ECE interview was the date of birth of the child, and this item was used to separate the eligible and ineligible children for the survey. The child's age was calculated as of January 1, 1991.

The targeted number of 3- to 8-year-olds included in a survey of 60,000 households was estimated based upon estimates from the October 1988 Current Population Survey. Estimates from that survey indicated that about 17.5 percent of households had children from 3 to 8 years old, and that of these households the mean number of 3- to 8-year-old children per household was 1.4. Assuming that 95 percent of the interviews would be completed, the targeted number of completed interviews for 3- to 8-year-olds in the NHES:91 was estimated to be about 14,000 \( (14,000 = 60,000 \times 0.175 \times 1.4 \times 0.95) \). The parent or guardian most knowledgeable about the care and education of each child was asked to respond to the extended interview for the child.

Based on data from the Screener interview, the percent of households with 3- to 8-year-olds was 18 percent and the mean number of 3- to 8-year-olds in these households was about 1.4 per household with these children. The completion rate for the ECE interview was 94 percent \( (N=13,892) \). Therefore, the number of completed ECE interviews was very close to the planned number of completed interviews.

The number of completed ECE interviews includes a small number of interviews with children who are 9 years old. The sample was expanded to include some 9-year-olds to estimate the number of children retained or repeating a grade. To accommodate this objective, 9-year-olds were included in the sample for the extended interview if and only if they were currently enrolled in first or second grade. This supplement can be used to provide more reliable estimates of grade-level retention. The number of children included in this supplement was expected to be small and, in practice, only 65 completed interviews were conducted for 9-year-olds.
3.3 Weighting Procedures

The objective of the NHES:91 is to make inferences about the entire civilian, noninstitutionalized population for the domains of interest. The estimates derived from the sample of telephone households were adjusted to totals which include both telephone and nontechnology households to support this goal.

The estimation or weighting procedures are described in steps. The first step was the weighting associated with the sample of telephone numbers. This weight was basically the inverse of the probability of selecting the household by the RDD method used in this study. The subsequent steps were the person-level weighting, i.e., weights used to estimate the number of persons. These methods included the adjustment of the estimates to independent totals from the March 1991 Current Population Survey (CPS).

The household weight was developed to account for the RDD sampling of telephone numbers, including the sampling rate differences by minority concentration strata. The weight was also adjusted for households that had more than one telephone number, and hence had more than one chance of being in the sample.

Person Weights for 3- to 8-Year-Olds

In sampling for the ECE component of the NHES:91, every sampled household with a 2- to 9-year-old was included. Extended ECE interviews were scheduled for all of the 2- to 9-year-old children in these households. The parent or guardian most knowledgeable about the care and education of each child was asked to complete the interview for that child, provided the child was between 3 and 8 years old as of January 1, 1991 (9-year-olds in first or second grade are discussed later).

The base household weight was assigned to each 3- to 8-year-old, since all children were sampled. The final weight for each completed 3- to 8-year-old interview was computed by adjusting the base weight to known totals by a raking procedure. The main purposes of raking were to adjust for nonresponse and the undercoverage due to sampling only telephone households.

The control totals were formed by taking the control totals used for the March 1991 CPS and allocating them based upon the characteristics estimated from the October 1990 CPS. The control totals were defined by home type (i.e., owned or rented) crossed with region, race/ethnicity crossed with income, and age. The raked weights were formed by iteratively
modifying the person weights so that they corresponded to the control totals. The control totals for each of the dimensions are given in Table 3-1. The sum of the 3- to 8-year-old weights is 22,293,858, and the variance is 880.

**Person Weights for Children 9 Years Old**

The weighting scheme for 9-year-olds was not the same as for the 3- to 8-year-olds because 9-year-olds in third grade or higher were not eligible for the study. The 9-year-olds were sampled in an effort to produce more reliable grade-specific (first and second grade) retention rates. Since only a fraction of 9-year-olds were eligible for interview, raking the completed interviews for 9-year-olds to the population of all 9-year-olds was inappropriate.

A two step weighting procedure was used. The first step involved poststratifying all the enumerated 9-year-olds in the sampled households to the CPS control totals by race/ethnicity and household income (see Table 3-1). This step adjusted the weights for undercoverage but not for extended interview nonresponse. The second step was to apply an extended interview nonresponse adjustment to the weights for respondents only. The adjustment factor was the inverse of the response rate for the ECE extended interview. The sum of the 9-year-old weights is 175,371, and the standard error is 1,751.

### 3.4 Computing Sampling Errors

Even though the NHES:91 was an RDD survey, the direct estimates of sampling errors for the estimates cannot be based on the assumptions of simple random sampling. Various factors, including oversampling to improve estimates of blacks and Hispanics, clustering of sampled persons within households, the use of the modified Waksberg approach, and nonlinear estimation procedures, all contribute to deviations from simple random sampling.

One method used for computing sampling errors to reflect these aspects of the sample design and the estimation procedures is called jackknife replication. In this method, the sample is divided into groups of replicates based upon the original sample of phone numbers. A replicate weight is developed for each replicate sample using the same procedures used for the full sample. This procedure is repeated for each replicate.

</tbody>
</table>

Estimates are then produced for each replicate using the replicate weights and compared to the full sample estimate in order to estimate the sampling error of the statistic. The computation of the replicate estimates, comparison to the full sample estimate, and the computation of the estimated sampling error for the statistic was done using the SAS software WESVAR using the JK1 option.

Replicate weights were created for the raked weights for the ECE survey. Since separate procedures were used for 9-year-olds, the replicate weights were also created for these weights. A total of 50 replicate weights were created. All of the steps used in creating the full sample weights were done for each replicate weight, including the final stage of raking.

In order to support the estimation of sampling errors by Taylor series methods, stratum and PSU variables were created and assigned to the completed interviews. The stratum and PSU variables were based on the sample as selected.

**Approximate Sampling Errors**

The sampling errors of estimates from the NHES:91 can be directly computed by either of the techniques described above. For many applications, a simple approximation of the sampling errors can be used instead of these more computationally expensive methods.

The approximation is based upon the actual computation of variances of estimates from the ECE. The estimates and the variances of the estimates were computed for a large number of statistics (over 3,400 estimates were computed). The statistics used in these computations were estimates of the percent of 3- to 8-year-olds who were involved in various types of activities or were participating in various types of nonparental care/education.

When a sample is drawn using simple random sampling, then the variance of an estimated percent can be expressed as the estimated percent \( p \) times its complement \( 100-p \) divided by the sample size. The ratio of the variance computed using the jackknife replicate estimates to the variance using the simple random sampling formula is called the design effect.

The design effect for most complex sample designs, like the NHES:91, is greater than unity because the use of clustering and differential sampling fractions tends to increase the variances of the estimates. In the NHES:91, both of these factors contributed to a general increase in the variance over what would be expected under simple random sampling.
The average design effect for the percentage estimates evaluated in the ECE was 1.3, and for most statistics the estimated design effect was between 1.1 and 1.5. The mean design effects were computed for estimates defined by the race and ethnicity of the child. For all four subgroups examined (blacks, Hispanics, nonHispanic whites, and other races), the mean design effect was equal to 1.3. The size of the design effects also indicates that the estimates of sampling errors from the ECE are not greatly affected by the various factors described above.

The average design effect can be used to quickly approximate the standard error for an estimate. For example, if 30 percent of all children are estimated to have a certain characteristic (for example, suppose that they had visited a library in the last month), then an approximate standard error can be developed in a few steps. First, the simple random sampling variance for an estimate of 30 percent from a sample of 13,800 is 0.15 (30 x 70/13,800). The simple random sample standard error is the square root of this, or about 0.4 percent.

The approximate variance of the estimate from the NHES:91 is the simple random sample variance multiplied by the average design effect of 1.3. In the example, the estimated variance would be .2 percent (1.3 x 0.15 percent). The standard error for the estimate could be approximated by the square root of this, 0.4 percent.

The approximate variance for other types of statistics, like quantitative data on the number of hours spent watching television, can also be computed using this approach. First, the simple random sample variance is estimated using a standard statistical package, like SAS and SPSS. Second, this variance is multiplied by the average design effect of 1.3 to approximate the variance under the NHES:91 design.

### 3.5 Imputation

In the NHES:91 as in most surveys, the responses to some data items were not obtained for all interviews. There are numerous reasons for item nonresponse. Some respondents do not know the answer for the item or do not wish to respond for other reasons. Some item nonresponse arises when an interview is interrupted and not continued later, leaving items at the end of the interview blank. Item nonresponse may also be encountered because responses provided by the respondent are not internally consistent and this inconsistency is not discovered until after the interview is completed.

For most of the data items collected in the NHES:91, the item response rate was very high. In other words, if a respondent was supposed to answer a specific item, then they actually provided a valid response in over 95 percent of the cases for most items in the survey. An item
that typically has a lower response rate is income. For the ECE component, the item response for income was 92 percent.

Despite the high item response rate, some data items were imputed. The imputations were done for two reasons. First, certain variables were used in developing the national estimates and complete responses were needed for this purpose. These included the variables used for raking and other variables, such as the number of residential phones, which are not included in the data file. Second, some data items were planned to be used for many of the publications from the survey and complete item responses helped to improve these presentations.

A nearest-neighbor, hot-deck procedure was used to impute missing responses. In this approach, the entire file was placed into a specified sort order which varied depending on the data items to be imputed. The sort order was determined by attempting to group respondents into those most likely to have the same response for the data item to be imputed. An example of an imputed variable is DADGRADE, the highest level of education completed by the child's father. The sort variables were the child's parents' marital status (PARNMARI), the mother's education level (MOMGRADE), and whether the father was employed (DADWORK). The use of these sort variables in combination assured that the donor and recipient were similar on all of these characteristics.

Whenever a case with a missing value was encountered, the value of the data item from the preceding complete case was imputed for the missing item. The method is called a nearest-neighbor, hot-deck approach because the value from the closest record (the nearest-neighbor) in the current data set (hot-deck) is used to replace the missing item.

For each data item which was imputed, an imputation flag variable was created. If the response for this item was imputed, then the imputation flag was set equal to one, otherwise it was missing. The flag was created to enable users to identify imputed values. Users can use the imputation flags to delete the imputed values, use alternative imputation procedures, or account for the imputation in computation of the reliability of the estimates produced from the data set.
4. DATA COLLECTION METHODS AND RESPONSE RATES

4.1 Data Collection Procedures

The following sections discuss the procedures used in the data collection phase of the NHES:91, including the use of computer assisted telephone interviewing (CATI), staff training, interviewer assignments and contact procedures, and quality control.

4.1.1 CATI System Applications

The use of a CATI system for the NHES:91 included a number of applications that facilitated the implementation of the NHES:91 survey procedures. Briefly, the most salient features of the CATI system for the NHES:91 were as follows:

- **Project Administration:** The CATI system reduced substantially the amount of paper recordkeeping ordinarily required for a telephone survey, such as contact records, and provides up-to-date reports on the status of cases, numbers and types of contacts, sizes of standing work queues, and interviewer productivity and response rates.

- **Eligibility and Sampling:** CATI automatically identified households and persons eligible for the NHES:91 survey topics. It also selected appropriate households for the AE sampling and individuals for extended interviews.

- **Scheduling:** CATI fed telephone numbers to the interviewers, maintained a schedule of callback appointments, and rescheduled unsuccessful contact attempts to the appropriate day and time according to the protocol for the study.

- **Skip Patterns:** The CATI system automatically guided interviewers through the complex skip patterns in the questionnaire, reducing the potential for interviewer error. This is particularly important for a survey in which repeated series of questions are asked about a particular subject, such as child care.

- **Receipt Control:** The CATI system provided automatic receipt control in a flexible manner which was used to produce a variety of status reports.
The use of CATI for the NHES:91 was critical because of the complexity of collecting information on the child care, educational, and home activities of children and the educational activities of adults. (More detailed information on the ECE Interviews can be found in section 2.2.) Without CATI, these would have been difficult surveys to administer, especially by telephone. The use of CATI was also helpful in the sampling of households and household members as required based on individual or household information collected during the survey.

4.1.2 Interviewer Training

Interviewer training was conducted over a 3-week period in late January and early February 1991. More than 300 interviewers were trained for the study, in groups of about 30. Each group received 20 hours of training related to the conduct of the NHES:91, in addition to basic training in general interviewing techniques and the use of the CATI system. This was followed by a scheduled 4-hour "live" session that was closely monitored by training staff and telephone interviewing supervisors.

Interviewer training was conducted using the CATI system throughout. In this way, the trainees actually entered information in the CATI system during training scripts and lectures, providing them with "hands-on" experience prior to beginning data collection. The topics covered in the training session included an introduction to the study, interactive lectures concerning each of the survey questionnaires, survey procedures, refusal avoidance, and practice role-play scripts.

The survey staff included 18 bilingual interviewers. These interviewers received the same training as all other interviewers, worked on the study conducting interviews in English for 3 weeks, and were then trained to conduct the interviews in Spanish.

4.1.3 Interviewing Procedures

The NHES:91 interviewers made at least seven attempts to screen households in order to determine the presence of eligible household members; that is, an eligible child or sampled adult. These seven calls were staggered on different days of the week and at different times of the day over a 3-week period, and included at least two day calls, three evening calls, and two weekend calls. Once a household was identified as eligible for an extended interview, the maximum number of calls was raised to 20. When repeated attempts to contact the respondent proved unsuccessful, the case was referred to a telephone supervisor to discuss appropriate methods of completing an interview (e.g., holding a case for some time and releasing
it for additional attempts later in the data collection period). This schedule was constant over the entire survey period.

The CATI system scheduled cases automatically based on an algorithm that was customized for the NHES:91 survey. The system assigned cases in the following order of priority:

- Cases that had specific appointments;
- Cases that had unspecified appointment/general callback times;
- Cases that were busy signals came up 15 minutes later for another attempt;
- Cases that had been attempted with no contact were tried during other specific time frames; and
- Cases that were new and had never been worked.

When necessary, an interview was conducted in Spanish. Interviewers coded a case as a "language problem" when they encountered a non-English speaking respondent and there was no evidence of an English-speaking household member. An interview was conducted in Spanish if that was the respondent's language; all other languages received a final disposition of "language problem." A hard copy Spanish language translation of the survey instruments was provided to each Spanish-speaking interviewer, and responses were entered into the CATI system as the questions were asked. Upon completion of all interviews, the interviewer was asked to record whether the interview was completed in English or Spanish.

Refusal conversion efforts were used to obtain responses from households or individual respondents who had initially refused to complete an interview. However, if the interviewer indicated that the response was "hostile" (e.g., profane or abusive), the case was reviewed by a supervisor to determine whether another attempt should be made. One refusal conversion attempt was made for each Screener or extended interview refusal, with the exception of these "hostile" cases. A two-week hold was placed on initial refusals before a conversion attempt was made.

Because of concerns about the Screener response rate, an additional refusal conversion attempt was made for a subset of second Screener refusals. The cases included in this effort were those for which the interviewers indicated on both attempts that the refusal was "mild," and those for which one refusal was rated "mild" and the other rated "firm, but not
hostile." No cases rated as "firm" on both refusals were selected for an additional attempt, nor were any cases rated as "hostile."

Another effort to increase Screener response was the re-release of maximum call cases--cases in which a person had answered on at least one of the seven attempts. The cases were held for a period of time and released for additional attempts during the last 3 weeks of the data collection period. No maximum number of calls was set, and the cases continued to be worked until the data collection period was over. A similar approach was used for the "residential answering machine" cases that had received the maximum number of calls.

There were some numbers at which an answer was never received during the seven attempts made. A sample of these cases was selected, and telephone company business office checks were made to determine the working status and residential status of the numbers. The results of this effort were incorporated into the final allocation of cases for nonresponse computation.

4.1.4 Data Collection Quality Control

Data collection quality control efforts began during the CATI development period. As the CATI system was programmed, extensive testing of the system was conducted. This testing included review by project research staff, telephone interviewing center staff, the programmers themselves, and data preparation staff. The testing by staff members representing different aspects of the project was designed to ensure that the system was working properly from all of these perspectives. A live pretest was conducted in early December, with a sample of about 200 households, to "shake down" the CATI system as a further effort to ensure that the system was working properly.

Quality control activities continued during training and data collection. During interviewer training, interviewers were paired with one another and conducted role-play interviews on the telephone that were monitored by supervisors. When interviewers began actual data collection, they were monitored on an ongoing basis by telephone center supervisors. In addition, project research staff also monitored the interviewers occasionally. Data preparation staff also reviewed the cases from the CATI system as they were completed, and referred problems to the project staff for resolution. Interviewer memos were posted and distributed when any recurring problems were identified. Additional training was also provided as necessary.
At least once each week, the CATI management system produced computer generated reports that displayed response rates, refusal rates, and refusal conversion rates for each NHES:91 interviewer. These reports assisted telephone center supervisors in identifying interviewer performance problems that might not be detected through monitoring.

### 4.2 Early Childhood Reinterview

A reinterview program of moderate size (500 interviews) was conducted for NHES:91 to accomplish the following objectives:

- Identify survey items that were not reliable;
- Quantify the magnitude of the response variance for groups of items; and
- Provide feedback to improve the design of future surveys.

The size of the NHES:91 reinterview program imposed some bounds on the ability to provide reliable statistics on the response variance for specific estimates. The response reliability statistics for similar types or groups of items, however, would produce patterns that are quantifiable and useful as guidelines.

### Reinterview Design

To avoid differential sampling of the children within the major ECE components (Preprimary and Primary), the sampling within these groups was proportional to their representation in the full sample. However, the sample of children was allocated to provide 300 original Preprimary Interviews and 200 original Primary School Interviews. The higher number of Preprimary Interviews was needed because of the diversity of care and educational arrangements of those children.

Another important design decision was whether the reinterview should be dependent or independent. A dependent reinterview is one in which the interviewer has access to the responses from the original interview. The findings of the Census Bureau for over 30 years have shown that dependent re-interviews consistently result in fewer differences between administrations, even though the responses to the original interview are not supposed to be viewed before trying to resolve any differences. These results suggest that when independent
reinterviews are used, it is not possible to resolve differences between responses to the two administrations.

The reinterviews were conducted using CATI methods, which provided an opportunity to control access to earlier responses for dependent reinterviews. The entire reinterview was conducted first, and then the CATI system produced a series of edit check screens to resolve any differences between the initial and the reinterview responses. The object of the reinterview was to provide information on the reasons for the differences, while not underestimating response errors (as is typically the case in dependent reinterviews).

**Reinterview Items**

Since the entire interview could not be reconducted for each reinterview, the reinterview concentrated on some key items. The items selected were those that were substantively very important and were not highly time-dependent. For the preprimary children the reinterview concentrated on the care and education arrangements of the child along with a few key characteristics of the arrangements, and a few family environment variables. For the primary school children, the reinterview concentrated on enrollment characteristics and a few family environment variables. The characteristics chosen from each interview were those most likely to be used in classifying the children (e.g., grade in school, type of care, where cared for, repeaters) and included a few items expected to have high response errors (e.g., hours of television, and afterschool program participation).

**Reinterview Data Collection Procedures**

The reinterviews were conducted by telephone using interviewers who were specially trained for this activity. The responses to the interviews were recorded through the CATI system. A data set containing both the original and the reinterview response and the reasons for any differences was developed and used for analysis.

Cases completed after the middle of March were eligible for the reinterview sample. All of the scheduled interviews in a household must have been completed in order for any of them to be eligible for the reinterview. Efforts were made to complete the reinterview about 2 weeks after the original interview whenever possible.
Results of the Reinterview

The results of the reinterview program indicate that the ECE interviews worked very well for a number of measures tested. Most of the items included in the reinterview had small to moderate measurement errors. At the same time, the reinterview pointed up several areas in which improvements in measurement could be pursued. The specific items with relatively high measurement errors included hours of television viewing, whether the child's daycare center or nursery school program was a Head Start program, and frequency of reading to the child.

Several items requiring recall, including past care and education arrangements, worked very well, and had relatively low error rates. Similarly, items related to enrollment and retention had very small measurement errors. Whether the child is enrolled in school was somewhat more problematic for preprimary children (e.g., those in nursery school), but the measurement errors were still relatively low.

Additional information on the design, procedures, and results of the NHES:91 ECE reinterviews is available in the report, "Reinterviews for the Early Childhood Education Component of the NHES:91."

4.3 Response Rates

A response rate is the ratio of the number of units with completed interviews (the units could be telephone numbers, households, or persons) to the number of units sampled and eligible to complete the interview. In some cases, these rates are easily defined and implemented, while in other cases the numerators or denominators of the ratio must be estimated.

The response rate is the percent of possible interviews completed, taking all survey stages into account, and the completion rate is the percent of completed interviews for a specific component of the survey. For example, household members are identified for extended interviews in a two-stage process; first, Screener interviews are conducted to enumerate and sample household members, and then the sample members are interviewed using extended questionnaires. The failure to complete the first stage Screener means that it is not possible to interview the members of the household. In this case, the completion rate for the second stage is the percent of sampled persons with completed interviews. The response rate is the product of the first and second stage completion rates.
Response rates and completion rates are identical for the first stage of the sampling and interviewing. For the NHES:91, the first stage is the Screener. The next section discusses the response rate (which is also the completion rate) for the Screener and provides a profile of the characteristics of the respondents. The response and completion rates for the extended interviews are given in the following sections.

### 4.3.1 Screener Response Rate

Table 4.1 gives the disposition of the 120,000 telephone numbers that were sampled for the NHES:91. The three major categories of response status are those identified as being numbers for residential households, those identified as nonresidential numbers (primarily nonworking and business telephone numbers), and those numbers which, despite numerous attempts, could not be identified as residential or not. At the bottom of the table, the estimated response rate for the Screener of 81 percent is shown.

The numerator of the response rate is the number of telephone numbers in households which participated in the survey (60,322). The denominator is the sum of the number of residential telephone numbers plus a proportion of the numbers with an unknown residential status that are assumed to be residential. Based on information obtained from telephone business office contacts for a sample of the numbers with an unknown residential status, 40 percent of these numbers were assumed to be residential for purposes of calculating the response rate.

Other estimates of the response rate were developed based upon different allocation schemes. The second footnote in Table 4.1 describes the five schemes presented in the table. It is reasonable to say that the Screener response rate is between 78 and 84 percent and the best estimate is 81 percent. The variability in the estimates arises because it is not possible to identify the residency status for each telephone number.

The Screener response rates varied somewhat by region of the country (based on the Census Region). In the Northeast and West regions the response rates were about 5 percent lower than those in the Midwest and South (the percents range from 76 percent to 84 percent). The response rates for metropolitan telephone numbers were about 6 percent higher than for nonmetropolitan numbers. The response rates for these variables are shown in Table 4.2.
Table 4-1. Number of telephone numbers dialed, residential status, and screener response rate

<table>
<thead>
<tr>
<th>Screener response category</th>

</tr>
<tr>
<td>Liberal response rate</td>
<td>83.6%</td>
</tr>
</tbody>
</table>

$^1$Includes 8 telephone numbers of households with more than one telephone number which were sampled twice in NHES.

$^2$All the response rates (except the weighted method) use the number of participating households as the numerator. The denominators vary: for the estimated response rate using the business office method, the proportion of unknown residential status numbers included in the denominator was based upon the proportion identified in checks with telephone business office; for the Council of American Survey Research Organizations' (CASRO) response rate, the proportion of unknown residential status numbers included in the denominator was based upon the residency rate for the numbers with known residential status; for the conservative response rate, all of the unknown residential status numbers were included in the denominator; for the liberal response rate, none of the unknown residential status numbers were included. The weighted response rates uses the same procedure as the business office check method, except the counts were adjusted by the probability of selection.

4.3.2 Extended Interview Response Rate

Table 4.3 gives the number of enumerated, sampled and completed extended interviews for the ECE. About 24 percent of the children identified in the Screener from 2 years to 9 years old were not eligible for the survey, because only those between the ages of 3 and 8 as of January 1, 1991 were surveyed. The age-ineligible cases were not interviewed and are not included in the data set.

Interviews were completed for 13,892 of the eligible children for a weighted completion rate of 95 percent. The main reason for nonresponse in the ECE survey was refusals by the parent/guardian to participate. When the completion rate is multiplied by the Screener completion rate, the overall weighted response rate for the ECE was 77 percent. About 55 percent of the completed interviews were Preprimary Interviews, meaning the child was not yet enrolled in first grade.

For the ECE interviews, there was very little variation in the completion rates by characteristics of the child or the household (see Table 4.3). The completion rate varied between 93 and 97 percent across region, home type, Hispanic origin, age, and household income. The only variable which showed any real variability was race, where the completion rate was only 87 percent for Asian or Pacific Islanders and 91 percent for blacks. The chance of obtaining a completed interview was not greatly affected by the typical characteristics associated with nonresponse (such as income).

4.4 Item Response in the Early Childhood Education Interview

This section discusses the item response rates in the ECE Preprimary and Primary School Interviews. The items included in this analysis were selected to represent key enrollment, participation, and parent characteristic items, to represent the range of items response rates, and to examine any differences in response rates to items appearing early in the interview versus those appearing later. For this analysis, nonresponse included "don't know," "refused," and "not ascertained."

---

1The percent of nonrespondents eligible for the survey (about 75 percent) was estimated by the percent of completed interviews which were eligible.

2Children who were 9 years old were included in the study if they were enrolled in second grade or below.

</table>

1 The completion rate is the weighted number of completed interviews divided by the sum of the weighted number of complete and nonresponse interviews. Approximately 25% of the nonrespondents are ineligible for computation of the completion rates.

For all of the items in the ECE interview, item response rates were very high. None of the items in the interview were found to have response rates of less than 94 percent, although the income item, taken from the Screener, had a response rate of 92 percent across all children. Nearly all ECE items had response rates of more than 99 percent. Table 4.4 shows the item response rates for a representative group of items including key enrollment and participation items, several home experience items, and selected parent and household characteristics. The number of cases for which each item was attempted and the percent of cases for which a valid response was obtained are shown.

In some cases, the number of missing values is less than 0.1 percent. For such items, the response rate is shown as 99.9 to indicate that there were a few missing cases, although technically most of the items so designated would round to 100 percent response.

The items for which a somewhat lower, but still near-complete, item response was obtained included items requiring recall of specific events on the part of the respondents. For example, some respondents had difficulty in recalling the year in which their child started kindergarten or first grade. The response rates to these items were still high. Only 2.2 percent of parents of primary school children could not recall the year in which their child started kindergarten, and only 1.2 percent could not recall the year in which their child started first grade.

Among respondents to both the Preprimary and Primary School Interviews, a small percent of the respondents did not know or could not recall whether the child's program at nursery school or prekindergarten was a Head Start program ("don't know" answers are counted as nonresponse). Still, the item response rates were quite high -- 94.6 percent for the Preprimary Interview item and 97.1 for the Primary School Interview item.

*Items for which missing values were imputed.

NOTE: The percent response rate is given as 99.9 when the number of missing values is less than 0.1 percent, rather than rounding the percent response to 100 percent. This designation is used to distinguish such variables (which usually have fewer than 10 missing values) from those that have no missing values.

5. DATA PREPARATION

5.1 Coding and Editing Specifications

Most of the coding of the interview data was accomplished by the NHES:91 CATI system. As the interviewers entered the number of the response option selected by the respondent, this number was written to the data file. However, some additional coding was required. When the respondent selected an "other" response, the interviewer entered text into a "specify" overlay which appeared on the screen. The "specify" responses were reviewed by the data preparation staff, and, where appropriate, coded into one of the existing categories of response. New response categories were developed for some of the "other, specify" responses, based on the number of responses. "Other" child care or early childhood programs reported in the P5 question series (pp. A-22 to A-23) of the Preprimary Interview (programs or arrangements not reported in previous sections) were coded.

5.1.1 Range Specifications

The ranges of most items in a CATI survey are determined by the codes for the available responses, since they are close-ended. The system will not accept an out-of-range code. However, some items such as ages, dates, and numbers of children, do not have a set of responses with specific codes, but require the interviewer to enter a value.

The range checks include both "soft" and "hard" ranges. A soft range is one that represents the reasonable expected range of values, but does not include all possible values. Responses outside the soft range are confirmed with the respondent to be sure that they are correct. For example, the number of daycare centers a child currently goes to (P3B) has a soft range of 1 through 2, because it was expected that nearly all responses would fall into this range (i.e., few children would attend more than two daycare centers). A value outside the soft range (but inside the hard range) may be entered if confirmed as correct by the interviewer.

Hard ranges are those that set finite parameters for the values that can be entered into the CATI system. Values outside the range are unacceptable. For example, for the child's birth month (C1), the hard range is 1 through 12, because the question pertains to months in a year. Any other response is impossible, since the only months in a year are 1 through 12. When a response was entered by an interviewer that was outside the hard range, a message appeared stating that the response was invalid. The interviewer then cleared the message by pressing the carriage return key. If the out-of-range value was the actual response the respondent had given (and not a keystroke error), the interviewer entered a text comment with a stated value and a
"don't know" response for the item. The comments were later received by data preparation staff and updated as necessary.

### 5.1.2 Consistency Checks

Consistency or logic checks examine the relationships between responses to be sure that they do not conflict with one another, or that the response to one item does not make the response to another unlikely. Many of the logic specifications for the NHES:91 interviews were contained within the CATI system. For example, skip patterns were controlled by the CATI system so that inappropriate items were avoided. Additional consistency (logic) checks for the NHES:91 interviews were included in the CATI system. If the logic check was violated, a special CATI screen appeared that explained the discrepancy by reporting both of the inconsistent answers and allowed the interviewer to enter a correction. If the interviewer passed through the check screen once and information was still inconsistent, the interviewer was asked to reverify information. After the second attempt, the inconsistent information was recorded.

### 5.1.3 Structural Edits

The complex interrelationships of the data contained in the NHES:91 database files were checked and maintained via frequency review, cross-tabulation review, and the execution of post-data collection structural edits. Structural edits check and report on any discrepancies between database items, and were designed to ensure that all required records were present and that all file records present were required.
6. GUIDE TO THE DATA FILES AND CODEBOOKS

6.1 Content and Organization of the Data Files

This section describes the public release data files that were constructed for the NHES:91 Early Childhood Education (ECE) component. Two ECE public release files were prepared:

- **Preprimary File** - Contains all completed Preprimary Interviews, including variables from the screener and Preprimary Interviews, derived variables, weights, and replicate weights. Users will be able to link this file to the Primary file for the purposes of conducting analyses involving all children. There is one record for each Preprimary Interview completed; thus, this file contains 7,655 records.

- **Primary File** - Contains all completed Primary School Interviews, including variables from the Screener and Primary School Interviews, derived variables, weights, and replicate weights. Users will be able to merge this file to the Preprimary file for the purposes of conducting analyses involving all children. There is one record for each Primary School Interview completed; thus, this file contains 6,237 records.

A common core identification number appears on each case which permits the linking of completed interviews for children from the same household--this core ID is the first 7 digits of PERSID. Both the Preprimary File and the Primary File are rectangular files. The public use tape includes SAS and SPSS-X control cards for file creation. See Appendix C for control cards and Appendix D for guidelines for using SAS and SPSS-X.

6.2 Variables

A case identification number, the questionnaire items, imputation flags, composite variables, and sampling weights make up the variables in the data files. The case identification number precedes the questionnaire items, which appear in order of occurrence in the questionnaire. These are followed by flag variables, composite variables, and finally the weight variables.
6.2.1 Names, Labels, and File Layout Positions

Shown in Appendix B are listings of the variables contained in each of the data files. The variable name column displays the unique identifier present in the SAS data file. The variable label column displays a short label associated with the variable as it appears in the SAS data file. The format column describes the format of the variable. A data format of "N" indicates a numeric variable and a data format of "A" represents a character variable. The length column indicates the length of the variable in terms of number of characters for a character variable and the number of digits for a numeric variable. The length descriptor also includes the number of digits found after the decimal point for non-integer numeric variables. The start column indicates the position in the data file where the variable begins and the end column indicates where the variable ends.

6.2.2 Missing Values for Variables

In these data files, certain codes termed "missing values" have been reserved to represent certain situations. These missing values and their interpretation are:

-1 **Inapplicable:** The value for the item is legitimately missing. In other words, responses to previous questions caused the flow of the survey to skip around the item.

-7 **Refused:** The respondent refused to answer the question.

-8 **Don't Know:** The respondent did not know the answer to the question.

-9 **Not Ascertained:** The respondent should have been asked and should have responded to the question based upon voluntary information gathered later in the survey or after completing the survey. However, based on the original information given, the question was skipped. In some cases, the respondent broke off the interview after completing most of it, and the remaining items were never completed.
6.3 Composite Variables

For analysis purposes, composite variables were constructed for the Preprimary and Primary files from two or more questionnaire items. In many cases, several items were combined to produce a new variable. The code used to create each composite variable is given in full in Appendix E. Composite variables were created before the original Early Childhood file was split into Preprimary and Primary files. For composite variables that were applicable only to one segment of the early childhood population, the appropriate cases were selected from the combined file. The MAINRSLT identifies which questionnaire had been administered: codes of PN and PF for the Preprimary and EN and EF for the Primary. The composite variables are described in alphabetical order within the following categories: variables on both the Preprimary and Primary files (section 6.3.2), variables on the Preprimary file only (section 6.3.3), and variables on the Primary file only (section 6.3.4). The number in parentheses following the original variable name used in the construction of the composite variable refers to the question number. Questionnaires can be found in Appendix A.

6.3.1 Missing Values for Composite Variables

Except in cases noted below, all missing values on the original variables used to create the composite variables, legitimate skips as well as "don't know" or "no answer," were handled as missing. Cases labeled missing on the composite variable (designated by . in the codebook) have missing values on every variable that comprises the composite or are missing on a variable essential to its definition.

6.3.2 Composite Variables on Both the Preprimary and Primary Files

AGE90, is the child's age on January 1, 1991. It was calculated by the CATI system based on item C1, month and year of birth.

AGEKIND, age of entry into kindergarten, was created for preprimary children in kindergarten, transitional kindergarten, or prefirst and for primary school children. For the preprimary children, age of entry into kindergarten was calculated using the child's date of birth, DOBMM and DOBYY (C1), GRADE (C6), and KINDYEAR (P15) or LASTYEAR (C7A). If responses to KINDYEAR and LASTYEAR indicated the child was in his/her first year of a kindergarten program, AGEKIND was calculated based on September 1990 as the date of entry into kindergarten. If responses to KINDYEAR and LASTYEAR indicated the child was in the
second year of a kindergarten program, September 1989 was used as the date of entry for calculating age of entry into kindergarten. For the primary school children, AGEKIND was created from date of birth, DOBMM and DOBYY (C1), and date of entry into kindergarten, KINDMM (E3) and KINDYY (E3).

The values for AGEKIND are ages in years and months of entry into kindergarten (yymm). The range is 3 years 0 months to 8 years 7 months. The overwhelming majority of cases (about 90 percent) fall into the range of 4 years 10 months to 6 years 11 months.

ALLGRADE is the grade or grade equivalent of the child. It was constructed from the variable GRADE (C6) or, if GRADE was missing, from GRADEEQ (C7), the equivalent to grade for children in ungraded schools. Legitimate skips were handled differently for this variable than for most composite variables. If both GRADE and GRADEEQ had values of -1, the value on ALLGRADE is "not enrolled in school" rather than missing.

The values for ALLGRADE are:

0 = Not enrolled in school
N = Nursery/prekindergarten/Head Start
K = Kindergarten
T = Transitional kindergarten
P = Prefirst/transitional first
1 = First grade or equivalent
2 = Second grade or equivalent
3 = Third grade or equivalent
4 = Fourth grade or equivalent
5 = Fifth grade or equivalent
6 = Ungraded and no equivalent

DADEMLPD is a measure of father/stepfather/male guardian's work status. It is composed principally of DADWORK (C26), was the child's father working for pay in the previous week, and DADHOURS (C28), number of hours per week he usually worked for pay. Cases in which the parent was on leave from work when the questionnaire was administered, as indicated by DADLEAVE (C27), were also included. Cases in which he was looking for work, DADLOOK (C29), and using appropriate means to find employment as indicated by DADPUBL, DADPRIV, DADEML, DADREL, or DADADS (C30) were also classified by this variable.
The values for DADEMPLD are:

1 = Working 35 hours per week or more  
2 = Working less than 35 hours per week  
3 = Working, hours not specified  
4 = Looking for work  
5 = Not in the labor force

**DADLABOR** classifies the father/stepfather/male guardian in terms of his labor force participation and, if not in the labor force, his primary activity as measured by what he was doing during most of the week the questionnaire was administered. The variable was constructed using DADWORK (C26) or DADLEAVE (C27), DADLOOK (C29) in combination with DADPUBL, DADPRIV, DADEMP, DADREL, DADADS (C30), and DADACTY (C31), the father's main activity during the previous week.

The values DADLABOR are:

1 = In labor force and working  
2 = Unemployed and looking for work  
3 = Keeping house/caring for children  
4 = Going to school  
5 = Retired/unable to work  
6 = Doing something other than working, keeping house, going to school, or looking for work

**FAMTYPE** categorizes the child as having one parent, two parents, or no parents in the household, where parent includes mother/stepmother/female guardian and father/stepfather/male guardian. The variables used to construct FAMTYPE were MOTHER, FEMGUARD, FATHER, and MALGUARD (C2).

The values for FAMTYPE are:

1 = One parent in the household  
2 = Two parents in the household  
3 = No parents in the household
MOMEMPLD is the work status of the mother/stepmother/female guardian in the household. It is composed principally of MOMWORK (C18), was mother working for pay in the previous week, and MOMHOURS (C20), number of hours usually worked for pay each week. Cases in which the parent was on leave MOMLEAVE (C19) were also included. Cases in which she was looking for work, MOMLOOK (C21), using appropriate methods to find employment as indicated by MOMPUBL, MOMPRIV, MOMEMPL, MOMREL, or MOMADS (C22) were also classified by this variable.

The values for MOMEMPLD are:

1 = Working 35 hours per week or more
2 = Working less than 35 hours per week
3 = Working, hours not specified
4 = Looking for work
5 = Not in the labor force

MOMLABOR classifies the mother/stepmother/female guardian in terms of her labor force participation and, if not in the labor force, her primary activity as measured by what she was doing during most of the week the questionnaire was administered. This variable was constructed using work status, MOMWORK (C18) or MOMLEAVE (C19), whether she was looking for work using appropriate means, MOMLOOK (C21) and MOMPUBL, MOMPRIV, MOMEMPL, MOMREL, MOMADS (C22), and mother's main activity during the previous week, MOMACTY (C23).

The values for MOMLABOR are:

1 = In labor force and working
2 = Unemployed and looking for work
3 = Keeping house/caring for children
4 = Going to school
5 = Retired/unable to work
6 = Doing something other than working, keeping house, going to school, or looking for work

PARGRADE designates the highest level of parental education in the household. It was created from the highest value of MOMGRADE (C16), highest grade completed, whether a high school diploma or equivalent was earned, MOMDIPL (C17), and the analogous variables
for father, DADGRADE (C24) and DADDIPL (C25). If information for one parent was missing, the information for the other parent was used. Cases in which a mother and/or father are in the household but the data for both mother and father were missing were classified as missing; there is a separate category for households in which there are no parents.

The values for PARGRADE are:

1 = Less than high school  
2 = High school graduate or equivalent  
3 = Vocational/technical education after high school or some college  
4 = College graduate  
5 = Graduate or professional school  
9 = No parent in the household

PARNTCOL classifies cases according to the college credentials of both parents or the single parent in a household. It was created from the variables MOMGRADE (C16), and DADGRADE (C24). Cases in which data are missing for both parents either due to "don't know" or "no answer" or to a legitimate skip because no parents are in the household are classified as missing.

The values of PARNTCOL are:

1 = Single parent or both parents have less than a college degree  
2 = One parent has less than a college degree, and the other parent has a college degree  
3 = Single parent or both parents have a college degree

PARNTHS, an analogous variable also created from MOMGRADE (C16), MOMDIPL (C17), DADGRADE (C24), and DADDIPL (C25), classifies cases according to the high school credentials of both parents or the single parent in a household.

The values of PARNTHS are:

1 = Single parent or both parents have less than a high school diploma  
2 = One parent has less than a high school diploma, and the other parent has a high school diploma  
3 = Single parent or both parents have a high school diploma
RACEETHN is a composite of the variables RACE (S5) and HISPANIC (S5). If the respondent designated ethnicity as Hispanic, RACEETHN is Hispanic regardless of whether RACE was classified as white or black.

The values for RACEETHN are:

1 = White, non-Hispanic  
2 = Black, non-Hispanic  
3 = Hispanic  
4 = All other races (e.g., American Indian or Alaskan Native, Asian or Pacific Islander), nonHispanic

TEENMOM is a recode of NEWMOM (C13) collapsing into three categories the age at which the child's mother/stepmother/female guardian first became a mother.

The values of TEENMOM are:

1 = Age 17 or younger  
2 = Age 18 or 19  
3 = Age 20 or older

6.3.3 Composite Variables Only on the Preprimary File

ANYCARE designates preprimary children who are currently receiving any type of regular, nonparental care or education. It was constructed from the variables RELCARE (P1A), NRELCARE (P2A), DAYCARE (P3A), and PREKNURS (P4A), as well as AFTRKIND (P14) and PROGCOD(n) (P5C) if coded for before or after school care.

The values for ANYCARE are:

1 = Yes  
0 = No

EVERCARE classifies children as to whether they currently or in the past received any regular, nonparental care/education. It was created from RELCARE (P1A), NRELCARE (P2A), DAYCARE (P3A), PREKNURS (P4A), RELEVER (P1D), NRELEVER (P2D),
DAYCEVER (P3N), and PREKEVER (P4N) as well as AFTRKIND (P14) and PROGCOD(n) (P5C) if coded for before or after school care.

The values for EVERCARE are:

1 = Yes
0 = No

FAMDAYC designates whether the child is currently cared for by a nonrelative outside of the child's home (not including center-based programs). It is composed of NRELCARE (P2A) and NRELHOME (P2B).

The values for FAMDAYC are:

1 = Yes
0 = No

HRSCARE, the total number of hours per week of regular, nonparental care or education, was created by adding RELHRS (P1C), NRELHRS (P2C), the sum of DAYCHRS(n) (P3D), the sum of PREKHRS(n) (P4HS), and PROGHRS(n) (P5E) if coded for before or after school care. There were 128 cases in which it appeared that the respondent gave duplicate information under daycare and nursery school/prekindergarten for significant hours, and special measures were taken for these cases. If the values for DAYCHRS(n) and PREKHRS(n) were equal and summed to 50 or more, only DAYCHRS(n) and not PREKHRS(n) was used to create HRSCARE to avoid double counting. (See Chapter 7 for a full discussion of the treatment of these anomalous cases.)

The value for HRSCARE is the number of hours in care or educational programs. The range is 0 to 161. Most cases (about 96 percent) are in the 0 to 50 hour range.

---

1 PROGHRS(n) was inadvertently excluded from the calculation of total hours for the majority of cases. Including PROGHRS(n) increases the total hours for about 2 percent of the cases. The increase is less than or about 3 hours for 85 percent of the cases.
PRIMCARE\(^2\) designates the primary type of regular, nonparental care/education from among the four types of care about which detailed information was gathered, relative care, nonrelative care, daycare center, and nursery school/prekindergarten/Head Start. The type of care/education program in which the child spends the greatest number of hours was designated to be the primary type of arrangement. For cases where it was indicated that the child received a single type of nonparental care/education, and the hours in care were missing, that type of care was designated the primary care arrangement. If the respondent indicated that the child had more than one type of care/education, yet there were no hours given for one or more of the types, the case was counted as missing on PRIMCARE. For cases where it appeared that the respondent gave duplicate information for daycare and nursery school/prekindergarten, i.e., cases in which the values for DAYCHRS(n) and PREKHRS(n) were the same and summed to 50 or greater, the value of ALLGRADE decided which hours were counted to determine the primary type of care. If ALLGRADE equaled N indicating the child was enrolled in nursery school/prekindergarten, PRIMCARE was designated nursery school/prekindergarten/Head Start. If ALLGRADE did not equal N, PRIMCARE was designated daycare center. (See Chapter 7 for a full discussion of the cases that appeared to have duplicate information.) For all other cases, PRIMCARE was determined by selecting the type of care/education with the maximum number of hours from among 1) the total number of hours for all daycare centers the child attended, DAYCHRS(n) (P3D); 2) the total number of hours for all nursery school/prekindergarten/Head Start programs in which the child participated, PREKHRS(n) (P4D); 3) the hours in relative care, RELHRS (P1C); and 4) the hours in nonrelative care, NRELHRS (P2C). In addition, if the child spent the most hours in relative care or in nonrelative care, RELHOME (P1B) and NRELHOME (P2B) were used to specify PRIMCARE as care in the child's home all or part of the time or outside the child's home all of the time. Cases in which the child spent equal hours in two or more types of care, with the exception of those in which hours appeared to be double counted as described above, received a separate value.

The values for PRIMCARE are:

- 0 = No regular, nonparental care arrangement
- 1 = Relative care in the child's home all or part of the time
- 2 = Relative care outside of the child's home
- 3 = Nonrelative care in the child's home all or part of the time
- 4 = Nonrelative care outside of the child's home
- 5 = Daycare center
- 6 = Nursery school/prekindergarten/Head Start
- 7 = Equal hours in 2 or more types of care

\(^2\)PRIMCARE is defined as the primary type of care/education in NHES:91. Other surveys apply the designation to an individual care/education arrangement.
**RATIODC** is the ratio of children to adults in the child's daycare room or group. It was constructed by computing the ratio of DAYCKID(n) (P3H) to DAYCADL(n) (P3I) for the program in which the child spends the most time as designated by DAYCHRS(n) (P3D).

The value for RATIODC are the rounded ratios. The range is 1 to 35 observed.

**RATIOPRK** is the ratio of children to adults in the child's nursery school/prekindergarten program. It was constructed by computing the ratio of PREKKID(n) (P4H) to PREKADL(n) (P4I) for the program in which the child spends the most time as designated by PREKHRS(n) (P4D).

The values for RATIOPRK are the rounded ratios. The range is 1 to 30 observed.

**REPTKIND** designates whether the child is in the second year of a kindergarten program. If the respondent indicated that the child's grade in school, GRADE (C6), was kindergarten, transitional kindergarten, or prefirst and if the child had been in kindergarten, transitional kindergarten, or prefirst last year as designated by LASTYEAR (C7A), or the respondent indicated that the child was in his or her second year in a kindergarten program by the response to KINDYEAR (P15), then REPTKIND reflects the child's repeating kindergarten. If the responses to GRADE, LASTYEAR and KINDYEAR indicate the child is in his/her first year of kindergarten, then REPTKIND shows kindergarten has not been repeated.

The values for REPTKIND are:

1 = Yes
0 = No

**TYPECARE** signifies whether the child is currently in home-based care, center-based care, or both. It was constructed from RELCARE (P1A), NRELCARE (P2A), DAYCARE (P3A), PREKNURS (P4A), PROGCOD(n) (P5C) coded for before and after school care, and AFTRKIND (P14).

The values for TYPECARE are:

0 = Not in regular, nonparental care
1 = Home-based care only
2 = Center-based care only
3 = Home-based and center-based care
6.3.4 Composite Variables Only on the Primary School File

AGEFIRST is the age of the child at entry into first grade. It was constructed from the child's date of birth, DOBMM and DOBYY (C1), and the month and year that the child entered first grade, FIRSTMM and FIRSTYY (E10A). If the month of entry into first grade was missing, it was designated 09.

The values of AGEFIRST are the ages in years and months (yymm). The range is 4 years 0 months to 9 years 6 months. Most of the cases (about 90 percent) were in the range of 5 years 6 months to 7 years 6 months.

EFAMDAYC designates whether the child was cared for by a nonrelative outside of the child's home, not including center-based programs, before starting first grade (or before the age of six). It was composed of ENRELCAR (E30A) and ENRELHOM (E30B).

The values for EFAMDAYC are:

1 = Yes
0 = No

ESPATH describes the child's participation in combinations of early childhood care or programs prior to first grade but not including kindergarten. Kindergarten was omitted from this variable because the high percentage of children who attend kindergarten resulted in little variability on that component. ESPATH was constructed from ERELCARE (E29A), ENRELCAR (E30A), EDAYCARE (E31), and EPREK (E32).

The values of ESPATH are:

1 = No nonparental care or programs
2 = Home-based childcare only
3 = Daycare center only
4 = Home-based childcare and daycare center
5 = Nursery school/prekindergarten/Head Start only
6 = Home-based childcare and nursery school/prekindergarten/Head Start
7 = Daycare center and nursery school/prekindergarten/Head Start
8 = Home-based childcare, daycare center, and nursery school/prekindergarten/Head Start
**KINDTYPE** characterizes the type of kindergarten in which the child was enrolled before entering first grade. It was created from EVERKIND (E2), KINDPUBL (E2A), KINDCHRC (E2B), and KINDFULL (E5).

The values for KINDTYPE are:

1 = Full-day, public kindergarten  
2 = Part-day, public kindergarten  
3 = Full-day, church-related, private kindergarten  
4 = Part-day, church-related, private kindergarten  
5 = Full-day, private but not church-related, kindergarten  
6 = Part-day, private but not church-related, kindergarten  
7 = Did not attend kindergarten

**PASTCARE** indicates whether the child received any type of regular, nonparental care/education before starting elementary school. It was constructed from responses to EREL CARE (E29A), ENRELCAR (E30A), EDAYCARE (E31), and EPREK (32).

The values for PASTCARE are:

1 = Yes  
0 = No

**REPEAT** gives the retention history of primary children enrolled in school. If information on enrollment is missing (ENROLL (C4)), the case is missing. The variables KINDYRS (E4), REPT1ST, REPT2ND, and REPT3RD (E13) were used in the construction of this variable.

The values of REPEAT are:

0 = Has not repeated  
1 = Repeated kindergarten  
2 = Repeated first grade  
3 = Repeated second grade  
4 = Repeated third grade  
5 = Repeated kindergarten and 1 or more other grades  
6 = Repeated more than one grade above kindergarten, but not kindergarten
SCHTYPE designates the type of elementary school the child currently attends as indicated by the variables SCHLPUBL (E17) and SCHLCHUR (E17A).

The values of SCHTYPE are:

1 = Public school
2 = Private, church-related school
3 = Private, not church-related school

6.4 Guide to the Codebooks

The codebooks, shown in Appendix F, contain complete descriptions of the contents of the data files on the tape. There is a codebook for the Preprimary file and a codebook for the Primary School file. The codebooks contain questionnaire items, composite variables, flag variables, and weight variables. The codebooks provide all the pertinent information for the variables in the files, including the variable name, the question wording, the position and format of the variable in the raw file, and the responses to the item. The unweighted frequency, unweighted percent, and weighted percent are provided along with each response. Figure 6-1 provides a description of each of the items appearing in the codebooks.

6.5 Instructions for Linking Preprimary and Primary School Files

Users may combine (merge) the Preprimary File and Primary School File for the purposes of conducting analysis involving all children. Users may use the SAS or SPSS-X control cards to read in the raw data files and combine the two resulting SAS or SPSS-X files. This may be accomplished using the SET... statement in a data step in SAS, for example. Appending the two raw data files will produce an invalid data file since the raw data files have different variables and layouts. Children from the same household may be linked using the first 7 digits of PERSID. The user should realize that items which are unique for respondents from one questionnaire will appear as missing for the respondents from the other questionnaire. For example, only the respondents to the Preprimary Interview will have values for the item DAYCARE (P3A), while all the respondents to the Primary School Interview will have a missing value for that item.
Appendix C contains listings of the SAS or SPSS-X control cards, which will create SAS and SPSS-X files from the raw data files. The label statements contain the labels associated with each of the variables.
Figure 6-1. Example of the codebook format

(1) DAYCARE = (2) P3A CHILD NOW ATTENDS DAYCARE CENTER
(3) P3A Is (CHILD) now going to a daycare center?

(4) POSITION: 182-183
(5) FORMAT: N2

(6) RESPONSE (7) CODES (8) FREQ (9) PERCENT (10) PCT
NOT ASCERTAINED -9 2 0.0
DK -8 1 0.0
YES 1 1383 18.1 22.0
NO 2 6269 81.9 78.0
TOTALS: 7655 100.0% 100.0%

DESCRIPTIONS:

(1) Variable name: This is the variable name associated with each item. This is the unique identifier present in the SAS data file and in the SPSS-X data definition cards on tape.

(2) Variable label: A short label which is associated with each of the variables is presented here. This label is that which appears in the SAS data file and SPSS-X data definition cards on tape. Labels contain the questionnaire item numbers. Some labels begin with the letter "D" to indicate a composite variable, "S" to indicate a screener item, "P" to indicate a Preprimary questionnaire item, "E" to indicate a Primary questionnaire item, or "C" to indicate both Preprimary and Primary questionnaire item. In this example, the label indicates item "P3A" from the Preprimary questionnaire.

(3) Question wording: This is the exact question wording as it appeared in the questionnaire.

(4) Position: This provides the starting and ending position of the variable in the raw data file on tape.

(5) Format: This provides the variable type, its width, and the number of positions after the decimal point, if necessary. A data type of "A" represents alphanumeric variables and data type of "N" represents numeric variables. In this example, DAYCARE is a numeric variable with a length of 2.

(6) Response categories: This column provides the response categories for the variable.

(7) Response codes: This column provides the actual numeric/alphanumeric codes present in the data files on the tape.

(8) Unweighted frequency counts: This column displays the unweighted frequency counts for this variable. The counts for missing values will also be included.

(9) Unweighted percentages: This column displays the unweighted frequency counts from the previous column as percentages. This column will also contain percentages for missing values.

(10) Weighted percentages: This column displays the percentages of frequency counts weighted up to the population. This column will not include percentages for missing values.
7. DATA ANOMALIES

The purpose of this section is to bring to the user's attention certain anomalies in the NHES:91 ECE survey data, to describe the nature of those anomalies, and, where appropriate, to suggest possible means of taking them into account when analyzing the ECE data.

7.1 Duplications in Reporting of Center-based Programs

The Preprimary Interview collected information on the participation of preprimary children in two types of center-based programs. The first of these categories was daycare centers, and the second category included nursery schools, prekindergartens, and Head Start programs. Despite attempts to avoid double-counting in the collection of these data, analysis of the results indicates that some duplicate reporting may have occurred. The original data as collected in the interview were not changed, however the cases have been flagged so that they can be identified by users.

A flag variable, DCNFLAG (daycare/nursery flag), appears on the preprimary cases. This flag identifies cases in which duplicate reporting is suspected. Those cases in which the flag is set to 1 meet the following conditions: 1) they have reports of both daycare center and nursery school participation, 2) the number of hours per week for each is identical, and 3) the sum of those hours is 50 or greater per week. There are 128 cases with DCNFLAG set to 1 on the Preprimary file.

The following is an example of how DCNFLAG has been used. To calculate unduplicated counts of daycare center and nursery school participation, a variable, DAYNURS, was created using the following approach:

**DAYNURS**

1 = DAYCARE CENTER, BUT NOT NURSERY SCHOOL
2 = NURSERY SCHOOL, BUT NOT DAYCARE CENTER
3 = BOTH
4 = NEITHER
IF DCNFLAG was set to 1 and the child was not in nursery school/prekindergarten/Head Start (based on the variable ALLGRADE), then DAYNURS was set to 1;

IF DCNFLAG was set to 1 and the child was enrolled in nursery school/prekindergarten/Head Start (based on the variable ALLGRADE), then DAYNURS was set to 2;

IF DCNFLAG was not set to 1 and the child was in a daycare center, but not a nursery school/prekindergarten/Head Start, then DAYNURS was set to 1;

IF DCNFLAG was not set to 1 and the child was in a nursery school/prekindergarten/Head Start, but not a daycare center, then DAYNURS was set to 2;

IF DCNFLAG was not set to 1 and the child was in both a daycare center and a nursery school/prekindergarten/Head Start, then DAYNURS was set to 3;

Otherwise, DAYNURS was set to 4.

In this approach, those children with presumed duplicate reports were counted as being in nursery school if the parents reported in the first section of the interview that their child was enrolled in school and reported the grade as nursery school, prekindergarten, or Head Start. The children with duplicate counts who were not reported as being enrolled in nursery school, prekindergarten, or Head Start in the enrollment section were counted as being in a daycare center.

Data users may wish to use this approach in reporting daycare center and nursery school participation. Another possible approach is the random assignment of children with DCNFLAG = 1 to daycare centers or nursery schools.

### 7.2 Head Start Participation

The NHES:91 Preprimary Interview asked for information on Head Start participation in three locations in the questionnaire. First, parents who reported that their child was enrolled in a daycare center were asked if the child's program at the daycare center was a Head Start program (item P3G). Second, when parents reported that their child was in nursery school, prekindergarten, or Head Start, they were asked which of these the child attended (P4TYPE). Third, parents who reported that their child was in a nursery school or
prekindergarten, rather than Head Start, at P4TYPE were asked if the child's program was a Head Start program (P4G). If a child was enrolled in more than one daycare center, or more than one nursery school, prekindergarten, or Head Start program, these items were asked for each program the child attended.

This approach resulted in an overcount of children enrolled in Head Start. The weighted total of children reported as being Head Start participants in one or more of these items is about 1.2 million children, more than twice the number reported by other sources as being served by the Head Start program.

Users are cautioned about the use of these items to estimate national Head Start participation. Careful analysis, taking into account household income and other variables associated with Head Start participation, should be conducted when the Head Start items are used.

7.3 Items on Fathers and Household Composition

One of the features included in the NHES:91 CATI system for the ECE component was the copying of parent information from one interview to the next within households, as a means of reducing response burden. Specifically, when the same parent or guardian responded for more than one child in the household, the questions about the parents' education and employment were not asked again in the subsequent interview(s), but were automatically copied from the first interview. This was designed to avoid the asking of items that had already been answered in the survey.

Anomalies arose in 21 of the 13,892 cases as a result of this procedure; all occurred in Preprimary cases. There are two types of cases in which anomalies occur.

1) The first child about whom an interview was conducted was reported as having a father or male guardian in the household. Items were asked about the father/guardian, and were copied into the record for the next child. However, the later child was reported as not having a father or male guardian in the household. As a result, there are responses to the father items when both FATHER and MALGUARD are coded "no." There are nine such cases.
2) The first child about whom an interview was conducted was reported as having a mother or female guardian in the household, but not a father or male guardian. The mother questions were asked and copied to the interview for a subsequent child. However, in the household composition question, the later child was reported as having a father or male guardian in the household. In these cases, there are no responses to the father items, although either FATHER or MALGUARD is coded "yes." There are 12 such cases.

There are two possible sources for these discrepancies. In some cases, the father of one child may not be the father of another child in the household, and, if not married to the mother, would not be the stepfather and may not have the role of male guardian. The second possible source for the discrepancy is interviewer error in coding the absence of a father/guardian where one exists, or the presence of a father/guardian where one does not exist.

Users can identify such cases by matching the FATHER and MALGUARD items to the items concerning the characteristics of fathers that are of interest in the user's analysis.

7.4 Parents' Weekly Hours of Work

In a small number of cases, children's mothers or fathers are reporting as having worked at a job for pay in the previous week, but the typical number of hours worked per week is 0 (zero). This occurred with 3 mothers and 4 fathers in Preprimary Interviews, and with 4 mothers and 1 father in the Primary School Interviews.

The apparent anomaly is believed to result from two possibilities. First, a parent may have worked during the previous week, but "typically" does not do so. Second, parents may have misunderstood the questions, and reported zero hours because they were on leave or temporarily laid off during the week prior to the interview. A response of zero could only be entered if confirmed with the respondents, since it violated a soft range. Therefore, all zeros represent actual responses, and not merely entry errors.

Users may include these zero values in analyses or treat them as missing values.
7.5 Nursery School Enrollment

Parents were asked to report whether their child was enrolled in school (item C4, variable ENROLL) and, if so, their child's current grade (item C6, derived variable ALLGRADE). Many parents reported at this stage of the interview that their child was enrolled in nursery school. Some additional parents reported later (in item P4A, variable PREKNURS) that their child was in nursery school/prekindergarten/Head Start, although they had not reported their child as enrolled in C4 or C6. Conversely, some parents reported their child as enrolled in nursery school at C4 and C6, but said "no" to item P4A. The extent of the discrepancies is shown below.

\[
\text{ALLGRADE} = \text{N}
\]

\[
\begin{array}{lrl}
\text{PREKNURS} = 1 & 1,916 \\
\text{PREKNURS} = 2 & 300
\end{array}
\]

\[
\text{ALLGRADE NE N}
\]

\[
\begin{array}{lrl}
\text{PREKNURS} = 1 & 173 \\
\text{PREKNURS} = 2 & 5,263
\end{array}
\]

This inconsistency in the reporting of nursery school participation may be the result of two ambiguities in the terms used by parent and terms used in the survey. First, some parents whose children are enrolled in a nursery school or similar program may not think of their child as enrolled in "school." They may think of traditional elementary/secondary schools as "school." Second, as noted earlier in the discussion of possible duplicate reporting, there is ambiguity in the classification of daycare centers and nursery schools. Some parents reported their child as enrolled in a preschool program, but reported the program under daycare centers.

Users of the data may wish to use the C4/C6 approach to classify children enrolled in nursery school, or may use item P4A (variable PREKNURS). Another possibility is to use both means, classifying all children reported as being in nursery school at either point as being enrolled.
7.6 Differences in Item Wording

There are minor differences in wording in a small number of items shared by the Preprimary and Primary School Interviews. These are as follows:

**Reading.** For the item on reading frequency (variable READTO), the Preprimary interview (item P19) asked how often "you and (OTHER PARENT/GUARDIAN) read to (CHILD)." In the Primary School Interview (item E36), the items reads "you or other family members..."

**Provider Contacts.** In the Preprimary Interview, items are asked about care providers or teachers in center-based programs contacting the parents about any problems the child was having there. The wording was inadvertently slightly different in the daycare center series (P3 series) and the nursery school/prekindergarten/Head Start series (P4 series). In the daycare series, parents were asked if the provider/teacher had "contacted" them; in the nursery school/prekindergarten/Head Start series, parents were asked if the provider/teacher had "called" them. The term "contact" broader than the term "called," and some difference in responses may have resulted from the difference in wording.
APPENDIX A

QUESTIONNAIRE
Hello, this is (NAME). I'm calling on behalf of the U.S. Department of Education. We are conducting a study based on the President's goals for improving education for children and adults. These questions usually take about 5 minutes.

S1. Before we begin, I'd like to be sure that I've dialed correctly. Is this (TELEPHONE NUMBER)?

YES ................................................................................... 1 (CONTINUE)
NO ................................................................................... 2 (GO TO S1A)
GO TO RESULT CODE ........................................................ 3

S1A. Thank you very much. It seems that the number has been dialed incorrectly. It is possible that your number may be called at a later time. [REDIAL]

S2. Is this phone number for ...

Home use only................................................................. 1 (GO TO S3)
Business and home use, or ........................................... 2 (GO TO S3)
Business use only........................................................... 3 (STERM1)

STERM1. Thank you very much, but we are only interviewing private residences.

S3. Are you a member of this household at least 16 years old?

YES ................................................................................... 1 (GO TO S4)
NO ................................................................................... 2 (GO TO S3A)

S3A. May I please speak with a household member who is 16 or older?

AVAILABLE ................................................................. 1 (GO TO S3D)
NOT AVAILABLE ........................................................... 2 (SCHEDULE CALLBACK)
THERE ARE NONE .............................................................. 3 (GO TO S3B)

S3B. May I please speak with the male or female head of this household?

PERSON ON PHONE ........................................................... 1 (CONTINUE)
OTHER PERSON, AVAILABLE .............................................. 2 (GO TO S3C)
OTHER PERSON, NOT AVAILABLE ....................................... 3 (SCHEDULE CALLBACK)

S3C. [READ INTRO] Are you the male or female head-of-household?

YES ................................................................................... 1 (GO TO S4)
NO ................................................................................... 2 (GO TO S3A)

S3D. [READ INTRO] Are you a household member at least 16 years old?

YES ................................................................................... 1 (GO TO S4)
NO ................................................................................... 2 (GO TO S3A)

NOTE: Response categories shown in mixed cases (upper and lower) were read to the respondent by the interviewer. Those shown in all upper case were not read. Those shown in italics were added during data cleaning (additional codes were created from among the “specify” responses).

NOTE: Unless otherwise noted, responses of “refused” and “don’t know” followed the skip pattern for “no.”
Early Childhood Education Screening Items

We’d first like to ask a few questions about your household.

S4. The Department of Education is very interested in the early educational experiences of children. Are there any children who live in your household who are between 2 and 9 years old?

YES ................................................................................... 1 (CONTINUE)

NO ................................................................................... 2 (AINTRO)

S5. Please tell me the ages of the children in your household who are 2 to 9 years old.

[ENTER IN MATRIX: INCLUDE CHILDREN 2 TO 9 YEARS OF AGE ONLY.]

AGE [2-9] | Is this child male or female? [M-F] | Is this child [READ RACES BELOW] | Is (he/she) of Hispanic origin? [Y=1/N=2] | What is (his/her) first name?

GENDER | RACE | HISPANIC

CODES FOR RACE: 1=White, 2=Black, 3=American Indian or Alaskan Native, 4=Asian or Pacific Islander, 91=Another race

CREATE HHRACE VARIABLE FROM INFOR ON FIRST CHILD: IF CHILD IS BLACK OR HISPANIC, THEN HHRACE = 1;
ELSE HHRACE = 2

ASK S6 AND S7 FOR THE FIRST CHILD

S6. Who is the parent or guardian in this household who knows the most about (CHILD’S) care and education?

NAME _______________________________

S7. What is (NAME’S) relationship to (CHILD)?

PARNRELN

NATURAL OR ADOPTIVE MOTHER .........................1
STEPMOTHER/OTHER FEMALE GUARDIAN ......................2
NATURAL OR ADOPTIVE FATHER .............................3
STEPFATHER/OTHER MALE GUARDIAN ....................4
GRANDPARENT .................................................5
BROTHER/SISTER ............................................6
OTHER RELATIVE ............................................7
NONRELATIVE ...............................................8

ASK S8, S8A, AND S9 FOR ADDITIONAL CHILD
S8. Who is the parent or guardian in this household who knows the most about (CHILD’S) care and education?

NAME ________________________________

S9. What is (NAME’S) relationship to (CHILD)?

PARNRELN

NATURAL OR ADOPTIVE MOTHER .................................. 1
STEPMOTHER/OTHER FEMALE GUARDIAN ...................... 2
NATURAL OR ADOPTIVE FATHER .................................... 3
STEPFATHER/OTHER MALE GUARDIAN ............................ 4
GRANDPARENT ................................................................ 5
BROTHER/SISTER ......................................................... 6
OTHER RELATIVE ......................................................... 7
NONRELATIVE ................................................................ 8

S8A. [ASK IF NOT OBVIOUS] Is this the same parent or guardian who knows about (PREVIOUS CHILD/CHILDREN’S) care and education?

YES ............................................................................. 1 (GO TO S9)
NO ............................................................................. 2 (GO TO S8)

GO TO S8 FOR NEXT CHILD OR IF HH IS SAMPLED, GO TO AINTRO AFTER LAST CHILD;
IF HH IS NOT SAMPLED GO TO ADDPERS1
Adult Education Screening Items

AINTRO.  We are also interested in knowing about the educational activities of people 16 years old and older.

**IF S4 = 1, GO TO S10A, ELSE ASK A10AA**

S10AA.  First, are there any people who normally live in your household who are under the age of 70?

YES...................................................................................1
NO ...................................................................................2

S10A.  What is your age?

AGE ...........................................................................

S10B.  Are you . . .

White ...............................................................................1
Black ...............................................................................2
American Indian or Alaskan Native, or ................................3
Asian or Pacific Islander?......................................................4
OTHER (SPECIFY)................................................................91

S10C.  Are you of Hispanic origin?

YES...................................................................................1
NO ...................................................................................2

**IF RESPONDENT IS BLACK OR HISPANIC, HHRACE = 1; ELSE HHRACE = 2**
**IF HOUSEHOLD IS SAMPLED FOR ADULT EDUCATION COMPONENT, ASK S10D AND COPY INFORMATION ON RESPONDENT INTO THE MATRIX**
**IF HOUSEHOLD IS NOT SAMPLED FOR ADULT EDUCATION, AND HAS CHILDREN, GO TO S17**
**IF HOUSEHOLD IS NOT SAMPLED AND HAS NO CHILDREN, GO TO STERM2**

S10D.  What is your first name?

NAME _______________________________

S10E.  [IF NOT KNOWN] Are you . . .

Male, or ..............................................................................1
Female..................................................................................2
S11. Please tell me the ages of the (other) people in your household who are 16 or older, including anyone who is living in student housing.

<table>
<thead>
<tr>
<th>AGE [16-110]</th>
<th>Is this adult male or female? [M-F]</th>
<th>Is this adult [READ RACE BELOW]</th>
<th>Is (he/she) of Hispanic origin? [(Y=1/N=2)]</th>
<th>What is (his/her) first name?</th>
</tr>
</thead>
</table>

CODES FOR RACE: 1=White, 2=Black, 3=American Indian or Alaskan Native, 4=Asian or Pacific Islander, 91=Another race

ASK S12INTRO THROUGH S14 FOR EACH ADULT

Now I am going to ask you some questions about ((NAME/AGE/SEX'S)/YOUR) participation in three kinds of educational activities over the past year: full-time school, part-time school, and all other kinds of adult education.

S12INTRO. First, (has (NAME)/have you) been enrolled as a full-time student in any kind of school, training program, or other educational program in the past 12 months, that is since (INTERVIEW MONTH), 1990?

YES ................................................................................... 1
NO ................................................................................... 2

IF S12=1 THEN ASK S12A, OTHERWISE SKIP TO S13

S12A. In which of the following types of full-time educational programs (was (NAME/AGE/SEX)/were you) enrolled?
(VERIFY: PAST 12 MONTHS ONLY)

YES NO

a. An elementary school, junior high school, or high school program? ........................................1 2
b. A program leading to an associate's degree? ......1 2
c. A program leading to a bachelor's or more advanced degree? ........................................1 2
d. A vocational or occupational training program after completing or leaving high school? ........1 2
e. An adult literacy or basic skills program ............1 2
f. An English as a Second Language (ESL) program.................................................................1 2
g. Some other program (SPECIFY) _____________________________.................................1 2
IF S12A=1 THEN ASK S12B, OTHERWISE SKIP TO S13

S12B. (Is (NAME/AGE/SEX)/Are you) currently enrolled as a full-time student in an elementary school, junior high school, or high school program?

YES ................................................................................... 1
NO ................................................................................... 2

IF S12B=1 THEN DISCONTINUE SERIES

S13. [In addition to (his/her/your) full-time studies] (Has (NAME/AGE/SEX)/Have you) been enrolled as a part-time student at a college or university in an associate's, bachelor's, or graduate degree program, in the past 12 months?

YES ................................................................................... 1
NO ................................................................................... 2

S14. Now I'm going to read you a short list of other kinds of adult education. [Not counting (full-time school) (or) (part-time courses taken for credit toward a degree)] Please tell me whether ((NAME/AGE/SEX) has/you have) been involved in any of these in the past 12 months.

YES NO

a. Continuing education courses or noncredit courses? ................................................................. 1 2
b. Courses by mail, television, radio or newspaper? ................................................................. 1 2
c. Private instruction or tutoring? ................................................................. 1 2
d. Educational or training activities given by an employer, labor organization, neighborhood center, church, or community group? ................................................................. 1 2
e. Instruction in basic skills such as math, or reading and writing English? ................................................................. 1 2
f. Instruction in English as a Second Language? ................................................................. 1 2
g. Or, any other organized educational activities? Please describe: ____________________________ 1 2

ADDPERS1. Now I'd like to verify what I have recorded. I have listed (NUMBER) 2-9 year olds. Is this information correct?

YES ................................................................................... 1
NO ................................................................................... 2

IF HH WAS NOT SAMPLED, GO TO S17
ADDPERS2. I have listed (NUMBER) adults. Is this information correct?

YES ................................................................................... 1
NO ................................................................................... 2

IF HOUSEHOLD HAS SAMPLED ADULTS, ASK S15 AND S16 FOR ALL ADULTS WHO ARE NOT THE SCREENER RESPONDENT.

S15. Is (NAME) living there, in student housing, or somewhere else?

HERE .......................................................... 1 (GO TO S17)
STUDENT HOUSING [That is, school sponsored housing such as a dormitory. Please include all housing sponsored, owned, or leased by the school.] .......................................................... 2 (GO TO S16)
OTHER PRIVATE HOME OR APARTMENT ........................................ 3 (INELIGIBLE)
INSTITUTION OR GROUP QUARTERS - INCLUDES JAIL/DETENTION CENTER, MEDICAL FACILITY, REHABILITATION CENTER, MENTAL HEALTH FACILITY, MILITARY BARRACKS, GROUP FOSTER CARE .................... 4 (INELIGIBLE)

S16. Would you please give me (his/her) last name and telephone number so that we can call (him/her) to talk about (his/her) educational experiences?

LAST NAME ________________________________________________
PHONE ________________________________________________
Household Characteristics

Now I have a few questions about your household.

S17. What is the total number of people living in your household, including all children and adults?

NUMPERS NUMBER

S18. In what county do you live?

COUNTY _____________________________

S19. What kind of home do you live in? Is it...

HOMETYPE A single family house or townhouse ......................... 1
An apartment, or .......................................................... 2
Some other type of home .............................................. 3

S20. Do you...

OWNHOME Own your home .................................................. 1
Rent your home, or .................................................... 2
Have some other arrangement ..................................... 3

S21. In addition to (NUMBER CALLED), do you have other phone numbers in your household?

YES ............................................................................. 1 (GO TO S21A)
NO .................................................................................. 2 (GO TO S22)

S21A. How many of these other phone numbers are used at least in part for home use?

NUMBER

S22. In studies like this, households are sometimes grouped according to income. Can you tell me which group best describes an estimate of the total income of all persons in your household over the past year. Please include income from all sources, such as salaries or other earnings, interest, retirement, and so on for all household members. Is your household income...

$25,000 or less, or .................................................. 1 (READ SET 1)
more than $25,000 .................................................. 2 (READ SET 2)

S22A (Was it/Which of the following ranges includes your household income?)

[SET 1]

INCOMRNG $5,000 or less .................................................. 1
$5,001 to $10,000 ...................................................... 2
$10,001 to $15,000 .................................................. 3
$15,001 to $20,000 .................................................. 4
$20,001 to $25,000 .................................................. 5
[SET 2]

$25,001 to $30,000..........................6
$30,001 to $40,000..........................7
$40,001 to $50,000..........................8
$50,001 to $75,000..........................9
over $75,000...............................10

IF EXTENDED INTERVIEWS ARE TO BE DONE:
INTERVIEWER IDENTIFIES RESPONDENT ON ”SID” SCREEN;
GO TO HHSELECT¹ TO SELECT AVAILABLE RESPONDENT FOR INTERVIEW

IF HH HAS NO CHILDREN AND WAS NOT SAMPLED FOR ADULT ED, OR
IF HH HAS NO CHILDREN AND WAS SAMPLED FOR ADULT ED BUT NO EXTENDEDs, READ STERM2.

STERM2. Those are all the questions I have about your household. Thank you very much for your assistance.

¹HHSELECT is a CATI screen used to identify interviews to be completed in a given household and the respondent for each interview.
[Hello, my name is (NAME). I am calling on behalf of the United States Department of Education, which is sponsoring this important study of early childhood education.] Now I would like to talk to you about (CHILD). These questions are about the educational experiences of young children at home, in child care, early childhood education programs, and in school. The interview takes about 10 minutes.

C1. Before we begin, I'd like to confirm (CHILD's) age. In what month and year was (CHILD) born?

I would like to talk with you now about (CHILD’S) child care or educational experiences. We want to include all care provided on a regular basis by someone other than you [and (CHILD’S) (OTHER PARENT/GUARDIAN)], whether or not there was a charge or fee. This does not include occasional babysitting.

CHILD CARE BY RELATIVES

P1A. Is (CHILD) now receiving care on a regular basis from a relative other than you [and (OTHER PARENT/GUARDIAN)]? This includes brothers and sisters, grandparents, or any other relatives.

RELCARE

YES............................................................................... 1  (GO TO P1B)
NO ............................................................................... 2  (GO TO P1D)

P1B. Is that care provided in your home or in another home?

RELHOME

OWN HOME ......................................................... 1
OTHER HOME ...................................................... 2
BOTH/VARIES ...................................................... 3

P1C. How many hours each week does (CHILD) receive care from all relatives other than you [and (OTHER PARENT/GUARDIAN)]?  
[IF MORE THAN ONE RELATIVE PROVIDES CARE, RECORD WEEKLY TOTAL FOR ALL.]

RELHRS

HOURS........................................................................... (GO TO P2A)

P1D. Has (CHILD) ever received care on a regular basis from a relative other than you [and (OTHER PARENT/ GUARDIAN)]?

RELEVER

YES............................................................................... 1
NO ............................................................................... 2

CHILD CARE BY NONRELATIVES

P2A. Is (CHILD) now receiving care on a regular basis from someone who is not related to (him/her)? This includes neighbors, friends, or home child care providers, but does not include organized settings like daycare centers.

NREL Care

YES............................................................................... 1  (GO TO P2B)
NO ............................................................................... 2  (GO TO P2D)

P2B. Is that care provided in your home or in another home?

NRELHOME

OWN HOME ......................................................... 1
OTHER HOME ...................................................... 2
BOTH/VARIES ...................................................... 3
P2c. How many hours each week does (CHILD) receive care from all nonrelatives who provide care? 
[IF MORE THAN ONE NONRELATIVE PROVIDES CARE, RECORD WEEKLY TOTAL FOR ALL.] 
NRELHRS 
HOURS ........................................................................ (GO TO P3A)

P2d. Has (CHILD) ever received care on a regular basis from a nonrelative?
NRELEVER
YES..................................................................... 1
NO ..................................................................... 2

EARLY CHILDHOOD EDUCATION PROGRAMS: DAYCARE CENTERS
Now I'd like to ask about organized care settings and early childhood education programs. Let's start with daycare centers.

P3a. Is (CHILD) now going to a daycare center?
DAYCARE
YES ..................................................................... 1 (GO TO P3B)
NO ..................................................................... 2 (GO TO P3N)

P3b. How many different daycare centers does (CHILD) currently go to?
DAYCNUM
NUMBER ........................................................................ (ASK P3C THROUGH P3M FOR EACH DAYCARE CENTER/PROGRAM CHILD ATTENDS)

P3c. How many days each week does (CHILD) go to the (first/next) daycare center?
DAYCDAY(n)
DAYS ........................................................................

P3d. How many hours each week does (CHILD) go to the (first/next) daycare center?
DAYCHRS(n)
HOURS ........................................................................

P3e. On the days when (CHILD) goes to this daycare center, does (he/she) go for a full-day or part-day program?
DAYCPRG(n)
FULL-DAY .................................................................... 1
PART-DAY .................................................................... 2

*Variables with the designation (n) end in the segment number, e.g., DAYCDAY1, DAYCDAY2, DAYCDAY3.
<table>

</table>
ASK P3CONF AFTER EACH SERIES UP TO NUMBER OF DAYCARE CENTERS REPORTED IN P3B

P3CONF. You said that (CHILD) goes to another daycare center. Is that right?

YES................................................................. 1 (ASK P3C-M)
NO ................................................................. 2 (GO TO P4A INTRO)

AFTER ASKING P3C-M AND P3CONF FOR EACH DAYCARE CENTER MENTIONED ABOVE, ASK P3OTHR

P3OTHR. MOREDAY(n)

Does (CHILD) go to any other daycare centers that we haven't talked about yet?

YES................................................................. 1 (ASK P3C-M)
NO ................................................................. 2 (GO TO P4A INTRO)

P3N. DAYCEVER

Has (CHILD) ever gone to a daycare center?

YES................................................................. 1 (GO TO P3O)
NO ................................................................. 2 (GO TO P4A)

P3O. DAYCEVIN

Did the daycare center (CHILD) went to have an educational program?

YES................................................................. 1
NO ................................................................. 2

P3P. DAYCEVHS

Was (CHILD’S) program at the daycare center a Head Start program?

YES................................................................. 1
NO ................................................................. 2

EARLY CHILDHOOD EDUCATION PROGRAMS: NURSERY SCHOOL, PREKINDERGARTEN, OR HEAD START

Now I’d like to ask about other early childhood education programs (CHILD) may be attending.

IF C6 = 'N' OR C7 = 'N', SET P4A = 1 AND SKIP TO P4B.

P4A. PREKNURS

Not counting any programs we already discussed, is (CHILD) now going to a nursery school, prekindergarten, or Head Start program? This does not include regular kindergarten.

YES................................................................. 1 (GO TO P4B)
NO ................................................................. 2 (GO TO P4N)

P4B. PREKNUM

How many nursery schools, prekindergartens, or Head Start programs does (CHILD) currently go to?

NUMBER............................................................

IF P4B = 0, RESET P4A TO 2 AND SKIP TO P4N
ASK P4C THROUGH P4M FOR EACH NURSERY SCHOOL OR PREKINDERGARTEN CHILD ATTENDS

<table>

WAITELSE ALREADY ENROLLED IN SOMETHING ELSE
(HEAD START, ETC.) .................................................. 12
WAITOTHKR OTHER (SPECIFY) ................................................... 91
E8. Since (he/she) started kindergarten, has (CHILD) changed schools?
CHNGYES
YES............................................................................. 1  (GO TO E8A)
NO ............................................................................. 2  (GO TO E9)

E8A. Has (he/she) changed schools once or more than once?
CHNGSCHL
ONCE .................................................................. 1
MORE THAN ONCE ............................................... 2

E9. When (CHILD) was in kindergarten, was (he/she) given any kind of test to help decide if (he/she) was ready to start first grade?
TESTFRST
YES...................................................................... 1
NO ...................................................................... 2

IF CHILD ATTENDED KINDERGARTEN AND GRADE < 6, GO TO E10A
IF CHILD ATTENDED K AND C4 = 1 AND GRADE = 6 OR 7, GO TO E17INTRO
IF CHILD ATTENDED K AND C4 = 2 AND C5 = 1, 2, OR 3, GO TO E29INTRO

E10. What was the main reason you decided not to have (CHILD) attend kindergarten?
WHYKIND
FULL-DAY NOT AVAILABLE .................................................. 1
SCHOOL R WANTS NOT AVAILABLE........................................ 2
DON'T THINK K IS NECESSARY ........................................... 3
CHILD IS IN AN ALTERNATIVE PROGRAM............................ 4
PREFER TO EDUCATE CHILD AT HOME................................. 5
CHILD HAS SPECIAL NEEDS/PROBLEMS ............................. 6
OTHER (SPECIFY) ............................................................. 91

IF C4 = 1 AND GRADE = 6 or 7, GO TO E17INTRO
IF C4 = 2 AND C5 = 1, 2, OR 3, GO TO E29INTRO

E10A. In what year and month did (CHILD) start first grade?
FIRSTMMFIRSTMM MONTH ......................  □□  YEAR ......................  □□
FIRSTYY

ASK E10B IF CHILD IS CURRENTLY ENROLLED (C4=1) AND DID NOT ATTEND K (E2=2), ELSE GO TO E11

E10B. Since (he/she) started first grade, has (CHILD) changed schools?
CHNGYES2
YES................................................................. 1  (GO TO E10c)
NO ........................................................................... 2  (GO TO E11)

E10c. Has (he/she) changed schools once or more than once?
CHNGSCH2
ONCE ................................................................. 1
MORE THAN ONCE ............................................... 2
E11. Has (CHILD’S) school ever suggested that (he/she) repeat a grade?

REPTSUGG

YES ..................................................................... 1

NO ..................................................................... 2

E12. Since (CHILD) started first grade, has (he/she) repeated or spent more than 1 year in any grade?

REPTEVER

YES ..................................................................... 1

NO ..................................................................... 2

IF E12 = YES, ASK E13. IF E12 = NO AND E4=2, GO TO BOX BEFORE E14 ELSE GO TO E17INTRO

E13. What grade or grades did (CHILD) repeat?  [CODE ALL THAT APPLY]

YES NO

FIRST ............................................................................... 1 2
SECOND ............................................................................. 1 2
THIRD ............................................................................... 1 2

ASK E14 TO E16 FOR EACH GRADE CHILD REPEATED

E14. (First, I’d like to ask you about (CHILD) spending two years in kindergarten./I’d like to ask you a few questions about the grades (CHILD) repeated.) Who first suggested that (CHILD) should repeat (GRADE)? Was it . . .

You and/or your spouse/partner ........................................... 1
(CHILD’S) teacher ............................................................. 2
(His/Her) school principal ............................................... 3
(His/Her) guidance counselor ........................................ 4
Another school staff member ......................................... 5
Someone else ................................................................ 6
Two-year kindergarten program ................................... 7

IF E14 > 1 (OTHER THAN PARENT), ASK E15

E15. Did you agree with that suggestion?

YES ..................................................................... 1

NO ..................................................................... 2
E16. Why did (CHILD) repeat (GRADE)?
[CODE ALL REASONS GIVEN]

REPTGRA(n) POOR GRADES/TROUBLE WITH CLASSES .......................1
REPTMAT(n) NOT MATURE ENOUGH ..................................................2
REPTBEH(n) COULDN'T BEHAVE ......................................................3
REPTMOV(n) MOVED DURING SCHOOL YEAR ....................................4
REPTSIC(n) MISSED A LOT OF SCHOOL DUE TO SICKNESS ..............5
REPTTES(n) DID POORLY ON ASSESSMENT OR PLACEMENT TEST ....6
REPTOTH(n) OTHER (SPECIFY) ......................................................91

E17 INTRO Now I'd like to talk with you about (CHILD'S) current year of school.

E17. Does (CHILD) go to a public or private school?
SCHLPUBL
PUBLIC .................................................................1 (GO TO E18)
PRIVATE ..............................................................2 (GO TO E17A)

E17A. Is that private school church-related or not church-related?
SCHLCHUR
CHURCH-RELATED .....................................................1
NOT CHURCH-RELATED ............................................2

E18. Parents differ in how much they talk to their children about what they do in school. How often do you [or (CHILD'S) (OTHER PARENT)] talk with (him/her) about (his/her) experiences in school? Would you say . . .

TALKCHLD
Not at all ........................................................................1
Rarely ...........................................................................2
Occasionally .............................................................3
Regularly .................................................................4

E19. Has (CHILD'S) teacher or school contacted you [or (OTHER PARENT/GUARDIAN)] about any behavior problems (he/she) is having in school?

BEHAVIOR
YES ........................................................................1
NO ..........................................................................2

E20. Has (his/her) teacher or school contacted you [or (CHILD'S) (OTHER PARENT/GUARDIAN)] about any problems (he/she) is having with schoolwork?

SCHLWORK
YES ........................................................................1
NO ..........................................................................2

E21. Have you [or (CHILD'S) (OTHER PARENT/GUARDIAN)] contacted (his/her) teacher or school about any concerns you have about how (he/she) is doing in school?

CONCERNS
YES ........................................................................1
NO ..........................................................................2
E22. Do you feel that (CHILD’S) teacher is usually available and willing to talk with you [and (OTHER PARENT/GUARDIAN)] about how (he/she) is doing in school?

**AVAILABL**

YES................................................................. 1
NO ..................................................................... 2

E23. Have you [or (OTHER PARENT/GUARDIAN)] met with (CHILD’S) teacher since the beginning of this school year, that is, since last September?

**METTEACH**

YES................................................................. 1 (GO TO E24)
NO ..................................................................... 2 (GO TO E25)

E24. Were those meetings regular parent-teacher conferences and "back-to-school" nights, or were they special meetings to talk about (CHILD).

**TYPEMTG**

REGULAR MEETINGS ........................................... 1
SPECIAL MEETINGS ............................................. 2
BOTH .................................................................. 3

E25. On average, how many days each week does (CHILD) have homework?

**HOMEWORK**

NONE .................................................................. 0 (GO TO E27)
ONE OR TWO DAYS .............................................. 1 (GO TO E26)
THREE OR FOUR DAYS ......................................... 2 (GO TO E26)
FIVE/EVERY DAY .................................................. 3 (GO TO E26)

E26. How often do you [and (OTHER PARENT/GUARDIAN)] help with or check (CHILD’S) homework?

**HELPHMWK**

Not at all............................................................ 1
Rarely.............................................................. 2
Occasionally .................................................... 3
Regularly ........................................................... 4

E27. What kind of grades is (CHILD) getting in school this year? Would you say . .

**GRADES**

Above average.................................................. 1
About average, or ............................................. 2
Below average .................................................. 3
UNGRADED ......................................................... 4

E28. What grade or year of school do you expect (CHILD) to be in next year?

**NEXTGRAD**

PRE-FIRST/TRANSITIONAL FIRST ....................... P
FIRST................................................................. 1
SECOND.................................................................. 2
THIRD ................................................................. 3
FOURTH .............................................................. 4
FIFTH ................................................................. 5
UNGRADED ......................................................... 6
Now I'd like to ask you some questions about any child care or early childhood education that (CHILD) received from birth [until (he/she) started first grade/until (he/she) was six years old]. We do not want to include occasional babysitting, but only arrangements you had for (CHILD) on a regular basis, whether or not there was a charge or fee.

**E29A.** Did (CHILD) ever receive care on a regular basis from a relative other than you [and (OTHER PARENT/ GUARDIAN)]? This includes brothers and sisters, grandparents, or any other relatives.

- **ERELCARE**
  - YES........................................................... 1 (GO TO E29B)
  - NO ....................................................... 2 (GO TO E30A)

**E29B.** Was that care provided in your home or in another home?

- **ERELHOME**
  - OWN HOME ............................................ 1
  - OTHER HOME ........................................ 2
  - BOTH/VARIED ........................................ 3

**E30A.** Did (CHILD) ever receive care on a regular basis from someone who is not related to (him/her)? This does not include organized settings like daycare centers.

- **ENRELCAR**
  - YES........................................................... 1 (GO TO E30B)
  - NO ....................................................... 2 (GO TO E31)

**E30B.** Was that care provided in your home or in another home?

- **ENRELHOM**
  - OWN HOME ............................................ 1
  - OTHER HOME ........................................ 2
  - BOTH/VARIED ........................................ 3

**E31.** Did (CHILD) ever go to a daycare center?

- **EDAYCARE**
  - YES........................................................... 1
  - NO ....................................................... 2

**E32.** Other than the programs we have already talked about, did (CHILD) ever go to a nursery school, prekindergarten, or Head Start program?

- **EPREK**
  - YES........................................................... 1
  - NO ....................................................... 2

**IF E31 OR E32 IS YES, ASK E33 AND E34, ELSE GO TO E35**

**E33.** Did (any of) the (daycare centers) (or) (early childhood progams) (CHILD) went to have an educational program?

- **EPREKINS**
  - YES........................................................... 1
  - NO ....................................................... 2

**E34.** (Were any of the programs/Was the program) (CHILD) attended a Head Start Program?

- **EPREKHS**
  - YES........................................................... 1
  - NO ....................................................... 2
Now I would like to ask you some questions about (CHILD’s) experiences at home and with members of your family.

E35. About how many books does (CHILD) have of (his/her) own? [READ RESPONSES]

NUMBOOKS

- NONE .................................................................. 1
- 1 OR 2 BOOKS .................................................... 2
- 3 TO 9 BOOKS ..................................................... 3
- 10 OR MORE BOOKS ........................................... 4

E36. About how often do you or other family members read stories to (CHILD)? [READ RESPONSES]

READTO

- Never .................................................................... 1
- Several times a year ......................................... 2
- Several times a month ..................................... 3
- At least 3 times a week ..................................... 4
- Every day .......................................................... 5

E37. About how often does (CHILD) read for enjoyment? [READ RESPONSES]

CHLDREAD

- Every day .......................................................... 1
- Several times a week ....................................... 2
- Several times a month ..................................... 3
- Several times a year ......................................... 4
- Never ................................................................... 5

E38. Does your family get a daily newspaper?

NEWSPAPR

- YES ..................................................................... 1
- NO ...................................................................... 2

E39. Does (CHILD) get special lessons or take part in a group that encourages activities such as sports, music, art, dance, drama, and so on?

ACTIVITY

- YES ..................................................................... 1
- NO ...................................................................... 2

E40. About how many hours per day does (CHILD) watch television or videotapes?

TVHOURS

- HOURS ..................................................................
- DON'T HAVE TELEVISION .................................. 95 (GO TO E44)
- LESS THAN 1 HOUR .......................................... 96

IF E40 = 0, GO TO E41A
E41. Are there family rules for (CHILD) about any of the following television-related activities?

<table>
<thead>
<tr>
<th>RULEWHAT</th>
<th>What programs (CHILD) can watch</th>
<th>YES</th>
<th>NO</th>
</tr>
</thead>
<tbody>
<tr>
<td>RULETIME</td>
<td>How early or late (he/she) may watch television</td>
<td>1</td>
<td>2</td>
</tr>
<tr>

PRIMARY FILE SPSS-X CONTROL CARDS
This is a SPSS program which will read in the raw data file into a SPSS data file. The JCL is a generic one for an IBM SYSTEM/370. Each IBM facility will have its own site specific commands and conventions. These conventions must be implemented by the programmer.

C-104
APPENDIX D
Guidelines for using SAS and SPSS-X
APPENDIX D
Guidelines for using SAS and SPSS-X

The files provided on the public release tape include SAS data files, SAS input cards files, and VALUE cards for PROC FORMAT. The data files are in SAS system format created using SAS release 5.18. These files contain the questionnaire variables, flags variables, composite variables, weight variables and labels associated with each variable.

Because of the size of the data files, SAS users should use the '(KEEP=...)' and '(DROP=...)' options in the 'SET...;' and/or 'DATA...;' or 'PROC...;' statements when creating temporary working data sets. This will minimize space usage and maximize processing efficiency. Also, SAS users may want to override the default work space and memory allocation when working with large data files. Increasing the REGION value in the options of the //EXEC SAS statement of the JCL will override the default memory allocation. The //LIBRARY DD can be used to increase the capacity of the format library, if the user includes the large number of VALUE cards in the PROC FORMAT statement. The //WORK DD statement can be used to increase the work space. The //WORK DD statement card should be placed just after the //EXEC SAS or the //LIBRARY DD card, as shown in the following example:

```
//EXEC SAS,REGION=2048K
//LIBRARY DD SPACE=(TRK,(50,50,60))
//WORK DD UNIT=SYSDA,SPACE=(24322,(1850,1000),,,ROUND)
//IN1 DD DSN=PRESCHL.SASLIB,DISP=SHR
//SYSIN DD *
PROC FORMAT;
VALUE FYESNO
  -1 = 'INAPPLICABLE'
  -7 = 'REFUSED'
  -8 = 'DK'
  -9 = 'NOT ASCERTAINED'
  1 = 'YES'
  2 = 'NO';
```

D-3
VALUE FHANDTYP
   -1 = 'INAPPLICABLE'
   -7 = 'REFUSED'
   -8 = 'DK'
   -9 = 'NOT ASCERTAINED'
   1 = 'A LEARNING DISABILITY'
   2 = 'MENTAL RETARDATION'
   3 = 'SPEECH IMPAIRMENT'
   4 = 'SEVERE EMOTIONAL DISTURBANCE'
   5 = 'HARDNESS OF HEARING'
   6 = 'DEAFNESS'
   7 = 'ORTHOPEDIC IMPAIRMENT'
   8 = 'VISUAL IMPAIRMENT/BLINDNESS'
   9 = 'DEAFNESS AND BLINDNESS'
  10 = 'OTHER HEALTH PROBLEM'
  11 = 'MULTIPLE HANDICAPS';

PROC FREQ DATA=IN1.PRESCHL(KEEP=HANDICAP HANDTYPE);
FORMAT
   HANDICAP FYESNO.
   HANDTYPE FHANDTYP.;
TABLES HANDICAP*HANDTYPE;
TITLE 'CHILD HAVE ANY KIND OF HANDICAP BY CHILD'S HANDICAPPING CONDITION';

The user may include in the PROC FORMAT only those VALUE cards for the variables which are needed for specific analysis. Once the PROC FORMAT has been established, user can include the FORMAT...; statements in any SAS data step or procedures.

The guidelines mentioned here are general suggestions. Each specific computer site will have its own set of guidelines and suggestions. The user should contact the technical assistance persons for the specific site to most efficiently utilize the system.

SPSS-X systems files may be created and used on most computer sites. SPSS-X control cards to read in the raw data file into an SPSS-X system file, as well as the variable label and value label statements, are included on the public release tape. Some of the guidelines mentioned above for SAS can also be applied to SPSS-X, such as keeping only the variables needed for the specific analysis and the use of the //WORK DD... statement to increase the work space. Users should contact the technical assistance person for the specific site to obtain the information necessary to utilize SPSS-X most efficiently.
