Teachers Threatened With Injury or Physically Attacked by Students

During the 2015–16 school year, a higher percentage of elementary public school teachers than of secondary public school teachers reported being threatened with injury (11 vs. 9 percent) or being physically attacked (9 vs. 2 percent) by a student from their school.

Students are not the only victims of intimidation and violence in schools. Teachers are also subject to threats and physical attacks, and students from their schools sometimes commit these offenses. In 2015–16, the National Teacher and Principal Survey (NTPS) asked public school teachers whether they were threatened with injury or physically attacked by a student from their school in the previous 12 months. These questions were also asked in the Schools and Staffing Survey (SASS) administered between 1993–94 and 2011–12. The NTPS was designed to allow comparisons with SASS data. However, because the 2015–16 NTPS was only administered to public school teachers whereas SASS was administered to both public and private school teachers, this indicator focuses on public school teachers only.

During the 2015–16 school year, 10 percent of public school teachers reported being threatened with injury by a student from their school. This percentage was lower than in 1993–94 (13 percent) but higher than in 2003–04 (7 percent) and 2007–08 (8 percent). There was no measurable difference between the percentages of public school teachers who reported being threatened with injury by a student in 2011–12 and 2015–16. Threats of injury were more common than actual physical attacks in all survey years. The percentage of public school teachers who reported that they had been physically attacked by a student from their school in 2015–16 (6 percent) was higher than in all previous survey years (around 4 percent in each survey year) except in 2011–12, when the percentage was not measurably different from that in 2015–16.
During the 2015–16 school year, there was no measurable difference between the percentages of male and female public school teachers who reported being threatened with injury by a student from their school (10 percent each). However, a higher percentage of female public school teachers than of male public school teachers reported being physically attacked by a student (6 vs. 4 percent).

The percentages of public school teachers who reported being threatened with injury or being physically attacked by a student from their school varied by the race/ethnicity of the teacher. In the 2015–16 school year, the percentage of Black public school teachers who reported being threatened by a student (12 percent) was higher than the percentage of White teachers (10 percent), which was in turn higher than the percentage of Hispanic teachers (8 percent). Despite these differences in the experience of threats, there was no measurable difference in the percentages of White, Black, or Hispanic public school teachers who reported being physically attacked by students. However, a higher percentage of public school teachers of other racial/ethnic groups (7 percent) than of Hispanic public school teachers (5 percent) reported being physically attacked by a student.
The percentages of public school teachers who reported being threatened with injury or being physically attacked by a student from their school also varied by the instructional level\(^3\) of the teacher. During the 2015–16 school year, higher percentages of elementary public school teachers than of secondary public school teachers reported being threatened with injury (11 vs. 9 percent) and being physically attacked (9 vs. 2 percent) by a student.

Endnotes:
1 Includes teachers in both traditional public schools and public charter schools.
2 Includes teachers who were American Indian/Alaska Native, Asian, Pacific Islander, and of Two or more races.
3 Instructional level divides teachers into elementary or secondary based on a combination of grades taught, main teaching assignment, and structure of teachers' class(es), rather than the level of school in which teachers taught. Teachers with only ungraded classes were classified based on their main teaching assignment and the structure of their class(es). Among teachers with regularly graded classes, elementary teachers generally include those teaching prekindergarten through grade 6 and those teaching multiple grades, with a preponderance of grades taught being kindergarten through grade 6. In general, secondary teachers include those teaching any of grades 7 through 12 and those teaching multiple grades, with a preponderance of grades taught being grades 7 through 12 and usually with no grade taught being lower than grade 5.
