In 2018, the employment rate was higher for young adults with higher levels of educational attainment than for those with lower levels of educational attainment. For example, the employment rate was 86 percent for young adults with a bachelor’s or higher degree and 59 percent for those who had not completed high school.

This indicator focuses on 25- to 34-year-olds (referred to here as “young adults”) and examines recent trends in two distinct yet related measures of labor market conditions: the employment rate and the unemployment rate. The employment rate (also known as the employment to population ratio) is the percentage of persons in the civilian noninstitutionalized population who are employed.¹ The unemployment rate is the percentage of persons in the civilian labor force (i.e., all civilians who are employed or seeking employment) who are not working and who made specific efforts to find employment sometime during the prior 4 weeks.

In 2018, the employment rate was higher for those with higher levels of educational attainment. For example, the employment rate was highest for young adults with a bachelor’s or higher degree (86 percent). The employment rate for young adults with some college² (79 percent) was higher than the rate for those who had completed high school³ (72 percent), which was, in turn, higher than the employment rate for those who had not completed high school (59 percent). The same pattern was observed among both young adult males and young adult females. For example, the employment rate for young adult females was highest for those with a bachelor’s or higher degree (83 percent) and lowest for those who had not completed high school (41 percent).

Employment rates were higher for young adult males than for young adult females in 2018, overall and at all levels of educational attainment. Specifically, the employment rate for young adult males was higher than the rate for young adult females overall (85 vs. 73 percent) and among those with less than high school completion (62 vs. 41 percent).
Employment and Unemployment Rates by Educational Attainment

with a bachelor’s or higher degree (91 vs. 83 percent), those with some college (85 vs. 74 percent), those who had completed high school (81 vs. 62 percent), and those who had not completed high school (73 vs. 41 percent). The difference in employment rates between young adult males and females (also referred to in this indicator as the gender gap) was generally narrower at higher levels of educational attainment. For instance, the gender gap was 8 percentage points for those with a bachelor’s or higher degree, while the gender gap was 19 percentage points for those who had completed high school and 32 percentage points for those who had not completed high school.

Figure 2. Employment rates of 25- to 34-year-olds, by educational attainment: Selected years, 2000 through 2018

From December 2007 through June 2009, the U.S. economy experienced a recession. For young adults overall, the employment rate was lower in 2010 (73 percent), immediately after the recession, than in 2000 (82 percent), prior to the recession. The employment rate increased after 2010, reaching 79 percent in 2018; however, the rate in 2018 was still lower than the rate in 2000. During these years, the same patterns in employment rates were observed for young adults at all levels of educational attainment. For instance, for young adults who had completed high school, the employment rate was lower in 2010 (68 percent) than in 2000 (80 percent); the employment rate then increased to 72 percent in 2018, though this rate was still lower than the rate in 2000.
Figure 3. Unemployment rates of 25- to 34-year-olds, by sex and educational attainment: 2018

The unemployment rate in 2018 was lower for those with higher levels of educational attainment. For example, the unemployment rate was lowest for those with a bachelor’s or higher degree (2 percent). The unemployment rate was lower for young adults with some college (5 percent) than for those who had completed high school (6 percent), which was, in turn, lower than the rate for those who had not completed high school (9 percent). The same pattern was observed for young adult males and young adult females, with the exception that there was no measurable difference in unemployment rates between young adult males who had completed high school and those who had not.

In 2018, the unemployment rate for young adults overall was higher for males than for females (5 vs. 4 percent). However, among those with a bachelor’s or higher degree, those with some college, and those who had completed high school, there were no measurable differences between the unemployment rates of young adult males and females. Among those who had not completed high school, the unemployment rate was lower for young adult males than for young adult females (7 vs. 13 percent).
Figure 4. Unemployment rates of 25- to 34-year-olds, by educational attainment: Selected years, 2000 through 2018

For young adults overall, the unemployment rate was higher in 2010 (11 percent), immediately after the recession, than in 2000 (4 percent), prior to the recession. The unemployment rate decreased after 2010, to 4 percent in 2018, and this rate was not measurably different from the rate in 2000. During these years, the same patterns in unemployment rates were observed for young adults with a bachelor’s or higher degree, for those with some college, and for those who had not completed high school. For young adults who had completed high school, the unemployment rate in 2010 (16 percent) was higher than in 2000 (5 percent) and the rate decreased from 2010 to 2018, to 6 percent; however, the rate in 2018 was still higher than the rate in 2000.

Endnotes:
1 Data in this indicator are based on sample surveys of the civilian noninstitutionalized population, which excludes persons living in institutions (e.g., prisons or nursing facilities) and excludes all military personnel.
2 In this indicator, “some college” includes those with an associate’s degree and those who have attended college but have not obtained a bachelor’s degree.
3 Includes equivalency credentials, such as the GED.
