Acting Commissioner

The National Center for Education Statistics (NCES) is the primary federal entity for collecting, analyzing, and reporting data related to education in the United States and other nations. It fulfills a congressional mandate to collect, collate, analyze, and report full and complete statistics on the condition of education in the United States; conduct and publish reports and specialized analyses of the meaning and significance of such statistics; assist state and local education agencies in improving their statistical systems; and review and report on education activities in foreign countries.

NCES activities are designed to address high priority education data needs; provide consistent, reliable, complete, and accurate indicators of education status and trends; and report timely, useful, and high quality data to the U.S. Department of Education, the Congress, the states, other education policymakers, practitioners, data users, and the general public.

We strive to make our products available in a variety of formats and in language that is appropriate to a variety of audiences. You, as our customer, are the best judge of our success in communicating information effectively. If you have any comments or suggestions about this or any other NCES product or report, we would like to hear from you. Please direct your comments to:

Acknowledgments

The authors gratefully acknowledge the assistance of staff members of the National Center for Education Statistics (NCES) and the Office of Educational Research and Improvement (OERI) for their advice, guidance, and review in the design and conduct of the field test study and in the preparation of this document. We are particularly grateful to C. Dennis Carroll, Associate Commissioner, Postsecondary Studies Division; Paula R. Knepper, Senior Technical Advisor, NCES Postsecondary Studies Division; and Andrew G. Malizio, Program Director, Postsecondary Longitudinal and Sample Survey Studies (PLSSS), and Kristin K. Perry, Statistician (PLSSS), for their constructive input and review.

Particular thanks are also extended to the study Technical Review Panel members, who provided considerable insight and guidance in development of the design and instrumentation of this study. Thanks are also extended to the many project staff members of the three contractors: Research Triangle Institute (RTI), MPR Associates, and the National Association of Student Financial Aid Administrators (NASFAA). At Research Triangle Institute, special acknowledgement is due to Lil Clark for her excellent and tireless efforts at preparing the various drafts and final version of this document.

Most of all, we are greatly indebted to the baccalaureate degree recipients who generously participated in the telephone follow-up survey. Their willingness to take the time to share information has made this field test study a success, and greatly improved the design of the full-scale B&B:2000/01.

Preface

This report describes and evaluates the methods and procedures used for the field test of the Baccalaureate and Beyond Longitudinal Study (B&B:2000/01). The B&B:2000/01 field test included important changes from previous B&B surveys (conducted in 1994 and 1997) in its sample design and collection of data. For example, the current field test is the first to restrict the selection of institutions to those which are Title IV eligible.

We hope that the information provided in this report will be useful to interested readers. The results of this field test were used to modify study procedures and instrumentation to be used in the full-scale B&B:2000/01, and should not be used to produce national estimates. Additional information about B&B:2000/01 and the B&B series is available on the web at <http://nces.ed.gov/surveys/b&b>.

Chapter 1

Introduction, Background, and Purpose

This document describes, summarizes, and evaluates the methodological procedures and results for the *field test* of the Baccalaureate and Beyond Longitudinal Study (B&B:2000/01). The Research Triangle Institute (RTI), assisted by MPR Associates, Inc., is conducting the B&B:2000/01 field test and subsequent full-scale study for the National Center for Education Statistics (NCES) of the U. S. Department of Education.

This introductory chapter describes briefly the background, purposes, schedule, and products of the B&B:2000/01 study and the unique purposes of the field test. In Chapter 2, the field test design and method are described. Overall outcomes of data collection, as well as results of special studies, are presented in Chapter 3. Chapter 4 documents the quality of the data collected, and Chapter 5 summarizes the major recommendations for changes in design for the full-scale study. Materials used during the field-test survey are provided as appendices to the report and cited, where appropriate, in the text.

A. Background and purpose of Baccalaureate and Beyond

The purpose of the B&B follow-up study is to describe recent bachelor's degree recipients and their activities in the year after graduation. B&B is designed to address issues such as time to degree, labor force participation and economic returns, participation in post-baccalaureate education, and student debt.

As in the previous studies, B&B collects base-year data during the National Postsecondary Student Aid Study (NPSAS) data collection. For example, NPSAS:93 served as the base year for data collection for the first Baccalaureate and Beyond Longitudinal Study (B&B:1993). These students were identified in NPSAS:93 as baccalaureate recipients during the 1992–93 school year. The first follow-up took place one year after graduation (B&B:93/94) and the second occurred four years after graduation (B&B:93/97). As with B&B:93/94, the current study will collect follow-up data from students who were identified as baccalaureate recipients in the NPSAS:2000 survey, one year after graduation. And, as with B&B:93/94 and the prior NCES Recent College Graduates (RCG) study series, it will allow study of graduates' experiences as undergraduates and their initial forays into graduate education and the labor market. It also offers an important opportunity to study early outcomes of newly qualified

teachers, including entry and attrition, certification, and participation in the teaching profession, and enables the continuation of a series of earlier NCES reports.

One of the major issues addressed in the B&B Longitudinal Study is how long it takes undergraduates to earn a bachelor's degree. B&B:2000/01 will permit continuation of the "time to degree" trend data provided by the preceding RCG cross-sectional and B&B:93 longitudinal surveys, which are periodically reported as indicators in the annual Condition of Education published by NCES.

B&B also provides information about the economic returns to bachelor's degree completion. B&B:2000/01 extends trend data from RCG and B&B:93/94 on employment status, income, and unemployment one year after graduation. In addition, B&B provides information about the supply of graduates trained in science and technology, and about the graduates who are employed in those fields. The issue of student debt, through both the federal student loan programs and the increased use of credit cards, is particularly relevant for recent college graduates. Data collected for B&B provide an estimate of the average debt accumulated by students in order to complete a bachelor's degree, and how this may affect future plans. With the addition of federal student loan history data from National Student Load Data System (NSLDS), B&B:2000/01 will be able to expand and improve information on student debt and repayment.

B&B:93/94 provided the data for the NCES report on newly qualified teachers. B&B:2000/01 offers the opportunity for comparative analyses to determine whether recent graduates' perspectives regarding teaching or tendencies to enter teaching changed in the seven years between these surveys.

B. Overall schedule and products of B&B:2000/01

B&B:2000/01 full-scale data collection is scheduled for June through December 2001. The operational schedule for the B&B:2000/2001 field test is presented in table 1.1.

Table 1.1 – Start and end dates for major B&B:2000/2001 field test activities

Activity	Start date ¹	End date ²
Sampling	12/6/99	12/29/99
Preload base-year data into computer-assisted telephone interviewing (CATI) records	3/17/00	3/17/00
CATI training	3/20/00	3/25/00
Mailed student prenotification letters	3/27/00	3/27/00
CATI data collection	3/28/00	7/2/00

¹This is the date on which the activity was initiated for the first applicable school and/or its associated students.

²This is the date on which the activity was completed for the last applicable school and/or its associated students.

The following publications and data products will be produced:

- electronically documented, restricted access research files (with associated electronic codebooks) for research data users;

- a Data Analysis System (DAS) for public access to B&B:2000/01 data;
- methodology reports for both the field test and the full-scale studies, providing details of sample design and selection procedures, data collection procedures, weighting methodologies, estimation procedures and design effects, and the results of nonresponse bias analyses; and
- two descriptive summaries: (1) a B&B descriptive summary with an essay, and (2) a report on newly qualified teachers.

C. Purpose of the field test

The major purpose of the B&B:2000/01 field test was to plan, implement, and evaluate all operational and methodological procedures, instruments, and systems proposed for use in the full-scale study. Many such methodological features, representing enhancements or refinements to previously used B&B approaches, had not been fully tested in the past. Using and testing methodologies in the field test that parallel the data collection procedures proposed for the main B&B data collection allow such procedures to be modified as necessary, before the much larger (and more expensive) full-scale data collection activities begin.

This page intentionally left blank.

Chapter 2

Design and Method of the Field Test

A. Sample design

The B&B:2000/01 field test sample is a sample of postsecondary students in the United States and Puerto Rico who completed a baccalaureate degree between July 1, 1998, and June 30, 1999. Students were identified as potentially eligible for the B&B field test if the institution or student indicated that the student had received or was a candidate to receive a baccalaureate degree between July 1, 1998, and June 30, 1999. All potentially eligible B&B students who responded in the NPSAS:2000 field test were sampled for the B&B follow-up survey. A subsample was selected from the potentially eligible B&B students who did not respond in the NPSAS:2000 field test.

1. NPSAS institutional sample

Effectively, all U.S. institutions eligible for Title IV aid¹ that offered academically or vocationally oriented postsecondary programs were eligible for NPSAS:2000.² Specifically, to be eligible for NPSAS:2000, a non-military-academy educational institution must

- offer an educational program designed for persons who have completed secondary education;
- offer more than just correspondence courses;
- offer at least one academic, occupational, or vocational program of study lasting at least 3 months or 300 clock hours;
- offer courses that are open to more than the employees or members of the company or group (e.g., union) that administers the institution;
- be located in the 50 states, the District of Columbia, or Puerto Rico; and

¹ U.S. military academies were excluded due to their atypical funding/tuition base.

² The NPSAS universe for the field test included all eligible institutions in the 1997–98 Integrated Postsecondary Education Data System (IPEDS) Institutional Characteristics (IC) file.

- have a signed Title IV participation agreement with the Department of Education.

Institutions providing only vocational, recreational, remedial, or correspondence courses, or only in-house courses for their own employees, were excluded.

Institutions selected for the NPSAS:2000 field test were not selected for the full-scale study because participation in both surveys was considered excessively burdensome. To accomplish this, the field test sample was selected after institutions large enough to be certainty institutions in the full-scale survey were deleted from the field test institutional sampling frame. Then, a stratified simple random sample of institutions was selected for the field test, using the same 22 strata as the full-scale study. Although no probability-based inferences were planned for the field test, a probability-based sample was used because the complement of the field test sample will be used for the full-scale study-sampling frame.

An important benefit of this method of selecting the institutions for the field test is that a more up-to-date institutional sampling frame could be constructed for the full-scale survey without loss of the ability to generalize to the full population. The full-scale sampling frame will be constructed from the 1998–99 IPEDS IC file, which became available after the field test sample had been selected. Institutions that had been selected for the field test sample will be deleted from the full-scale sampling frame so that they will not be selected for the full-scale sample. The probability of selection for the full-scale study will be adjusted for institutions on the sampling frame based on the probability that they were not selected for the field test sample.

Nearly twice as many institutions as needed were selected in the simple random sample for the field test so that the field test sample could be selected purposively from this sample. Three institutions in Puerto Rico were purposively selected to evaluate the viability of alternative methods of locating and interviewing students located there, and to check on whether the improved response rates, which RTI achieved in Puerto Rico in NPSAS:96, would continue. Clusters of institutions were selected in several cities to provide an adequate number of students for testing the field interviewing procedures. The remaining field test institutions were selected to represent the 22 institutional strata.

In total, 74 institutions were selected for the field test with the expectation that this sample size would yield 66 institutions that both were eligible and would provide lists for student sampling. A breakdown of sampled institutions by original institutional stratum is provided in table 2.1. This table also shows, in total and by institutional stratum, eligibility rates and rates for providing student lists. Overall, 98 percent of the sampled institutions met NPSAS eligibility requirements, and of those, about 86 percent provided lists for student sampling.

Table 2.1—NPSAS:2000 field test institutional sampling, eligibility, and list providing, by sampling stratum

<i>Total private, for-profit</i>	7	9.5	7	100.0	6	85.7

¹Percent is based on overall total within column.²Percent is based on number sampled within row.³Percent is based on number eligible within row.⁴Includes two institutions which agreed to provide lists but did not do so in the time provided⁵A school was classified as "high ed" if it was in the top 20 percent of its stratum in terms of the numbers of baccalaureate students graduating with education degrees.⁶A school was classified as "low ed" if it was not in the top 20 percent of its stratum in terms of the numbers of baccalaureate students graduating with education degrees.⁷Includes one institution which agreed to provide lists but did not do so in the time provided.

NOTE: Most first-professional-granting institutions award doctor's degrees as well as first-professional degrees.

SOURCE: U.S. Department of Education, National Center for Education Statistics, National Postsecondary Student Aid Study:2000 field test.

2. NPSAS student sample

Not all students enrolled in eligible institutions were considered eligible for NPSAS. In addition to being enrolled at a NPSAS-eligible institution during the appropriate time frame (for the field test, between July 1, 1998, and April 30, 1999; for the full-scale study, between July 1, 1999, and June 30, 2000), NPSAS-eligible students had to be: enrolled in either (1) an academic program; (2) at least one course for credit that could be applied toward fulfilling the requirements for an academic degree; or (3) an occupational or vocational program that required at least 3 months or 300 clock hours of instruction to receive a degree, certificate, or other formal award. Simultaneously, they could not be concurrently enrolled in high school, nor enrolled solely in a GED or other high school completion program.

Students who received a baccalaureate degree at any time between the appropriate dates for the field test (between July 1, 1998, and June 30, 1999) were eligible for the NPSAS and the Baccalaureate and Beyond studies.

Students were selected from “unduplicated”³ student lists provided by participating institutions, using the same procedures to be implemented in the full-scale study. While schools were made aware of student eligibility requirements, as in previous waves of NPSAS, the bulk of the student eligibility determination was accomplished after sampling from the provided lists (i.e., during record abstraction or student interviewing). Incorrect information provided by institutions as to student status resulted in some other misclassification errors, which were also corrected after sampling.

Students were stratified within selected institutions into seven strata. Separate strata were established for baccalaureate degree completers, undergraduates, first-professional students, and other graduate students. The baccalaureate stratum was subdivided into two mutually exclusive strata based on whether students’ major field of study was business or another field. Three graduate strata were defined as: students in master’s degree programs, students in doctorate degree programs, and other graduate students. Stratum sampling rates were predetermined for each institution to yield the desired stratum sample sizes and minimum institution sample sizes.

Business baccalaureate recipients were sampled at lower sampling rates than other baccalaureate recipients because large proportions of all baccalaureate degrees are awarded to business majors. Differential sampling rates were also used for the three types of graduate students in order to get adequate representation of students pursuing doctoral degrees and to limit the sample size for “other” graduate students, who are of limited inferential interest. Established sampling rates were applied to the unduplicated student lists to attain the sample using stratified systematic sampling procedures. The sample was constrained so that (1) no less than 25 students were to be selected from each institution, even if the sampling rate had to be raised; and (2) the total sample

³In some instances, the lists could be unduplicated by the supplying institutions. However, in many cases, institutions were unable (or unwilling) to supply unduplicated lists, and the unduplicating process was accomplished by contractor staff.

from an institution did not exceed the expected sample size based on the 1997–98 IPEDS information by more than 50, even if the rates had to be reduced. The sample size was monitored by strata and sampling rates were adjusted, where appropriate.

The achieved field test student sample sizes are shown in table 2.2 by institutional type and student stratum. About half of the overall sample, more than half of the baccalaureate sample, and almost half of the other undergraduate sample were selected from public institutions (reflecting the higher undergraduate enrollment in such institutions); however, the graduate/first-professional sample had a slightly higher percentage selected from private, not-for-profit institutions than from public institutions. During the full-scale study, the sample sizes in each student stratum will be closely monitored and the sampling rates adjusted, as necessary, to achieve target sample sizes.

Table 2.3 shows the base-year NPSAS field test response rates for the B&B cohort. A total of 1,302 potential baccalaureate degree recipients were identified using institutionally provided lists of students who graduated or were candidates to graduate between July 1, 1998, and June 30, 1999. Of the 1,302 potential baccalaureate degree recipients sampled during the base year, 196 were from institutions that submitted data-file CADE. The collection of CADE information via data file was a procedural test, and these cases were not intended to be loaded into the computer-assisted telephone interviewing (CATI) system because there would not be sufficient time to work these cases in CATI during the base year field test. Therefore, the 196 data file cases were excluded from both the base year and follow-up samples. Additionally, 61 of the 1,302 B&B sampled students were subsequently determined in the NPSAS field test survey to be ineligible. Of the remaining 1,045 students sampled as B&B who were eligible for NPSAS, 797 (76.3 percent) participated in NPSAS. Students in public institutions had the highest NPSAS response rates for the B&B cohort (80.2 percent).

The field test student sample was selected to represent the various institutional sectors so that we could properly test the study instruments and operations. However, since we are not interested in making statistical inferences from field test data, ensuring population coverage was not as critical for the field test design as it will be in the full scale study.

Table 2.2—Initial classification of NPSAS:2000 field test student sample, by school type and student stratum

Institution type	Student sampling stratum ¹							
	Total sample		Baccalaureate sample ²		Other undergraduate sample		Graduate/first-professional sample ²	
	Number	Percent	Number	Percent	Number	Percent	Number	Percent
All institutions	2,587	100.0	1,302	100.0	680	100.0	605	100.0
Institutional level								
Less-than-2-year	245	9.5	(†)	(†)	245	36.0	(†)	(†)
2-year	178	6.9	(†)	(†)	178	26.2	(†)	(†)
4-year, non-doctorate-granting	986	38.1	717	55.1	176	25.9	93	15.4
4-year, doctorate granting	1,178	45.5	585	44.9	81	11.9	512	84.6
Institutional control								
Public	1,303	50.4	715	54.9	317	46.6	271	44.8

3. B&B follow-up student sample

The sampling frame for the B&B:2000/01 field test was constructed by considering the following types of students from the NPSAS:2000 field test:

- students who were located and interviewed during the NPSAS:2000 field test, and confirmed to be baccalaureate recipients between July 1, 1998, and June 30, 1999;
- students who were sampled as members of the B&B cohort, and located but not interviewed in the NPSAS:2000 field test;
- students who were sampled as baccalaureate recipients, but not located for the NPSAS:2000 field test;

- students who were sampled as baccalaureate recipients but classified as exclusions⁴ for NPSAS; and
- students who were sampled as baccalaureate recipients but did not meet the NPSAS eligibility requirements specified in section A.2.

For each of the above categories, table 2.4 shows the distribution of NPSAS:2000 field test and the B&B follow-up sample.

The first three types of students listed above formed the three sampling strata for the B&B:2000/01 field test. All students were selected from the first stratum. Within the other two strata, the students were sorted by whether or not they were included in the NPSAS incentive experiment,⁵ and then they were further sorted by the nine-level institutional sector. Within each stratum, a systematic sample was selected from the sorted frame, which ensured proportional representation of the students within strata by whether or not they were included in the incentive experiment and by sector. The total B&B follow-up field test sample size consisted of 855 students, 672 of whom were not in the NPSAS incentive experiment, and 183 of whom were in the experiment. The B&B follow-up sample distribution by institutional sector is shown in table 2.5. None of the exclusions or ineligible students was sampled.

B. Data collection design

1. Locating

The basic B&B:2000/01 design involved tracing sample members to their current location and conducting a computer-assisted telephone interview with them about their experiences since the NPSAS:2000 field test interview approximately one year earlier. The data collection activities, including locating, are shown in figure 2.1. While the flow shown is sequential for any given case, these activities were quite dynamic. At any given time during the locating/interviewing period, different sample members were at markedly different stages in the flow.

⁴ Students who had died or were incarcerated, institutionalized, or out of the country for the duration of the data collection period were classified as exclusions for NPSAS.

⁵ See chapter 2, section H.2, for more details.

Table 2.4—Distribution of NPSAS:2000 field test and B&B:2000/01 follow-up sample sizes

Disposition of NPSAS:2000 field test B&B cases	NPSAS:2000 B&B field test sample	B&B:2000/01 follow-up field test sample size
Total	1,034	855
NPSAS:2000 respondent, confirmed B&B	730	730*
Located but not interviewed in NPSAS:2000	117	59
Not located	131	66
Exclusion	21	0
Confirmed ineligible during NPSAS:2000	35	0

*Includes 718 respondents from the B&B base-year sample and 12 respondents who were not initially selected as part of the B&B sample but were determined to be B&B eligible during the base year (i.e., false negatives).

Figure 2.1—Flow of locating and interviewing activities for B&B:2000/01 field test

a. Pre-CATI locating

Locating information obtained during the NPSAS:2000 field test was incorporated into the B&B:2000/01 field test locator database, and sent in batch mode to the U.S. Postal Service National Change of Address (NCOA) system and Telematch in February of 2000. These services provided updated address and telephone number information respectively. Following the first round of NCOA and Telematch batch processes and after updating of the locator database with the new information, a student mailing was sent to all sample members one week before data collection started. The purpose of the mailing was to inform them of the study and their rights as participants. In addition, the student mailing gave sample members the opportunity to complete and return an address update sheet. Each sample member received a lead letter, address update sheet, information leaflet, and business reply envelope (see appendix B). All locating information obtained from the student mailing was entered into the locator database.

b. CATI locating

Locating and tracing activities took place concurrently with efforts to gain cooperation from and interview sample members. When assigned a case, the telephone interviewer called the telephone number designated by the system as the best number (i.e., the number among all available locator numbers that appeared to have the greatest potential for contacting the sample member) and attempted to interview the designated sample member. When the person answering the call said that the sample member could not be reached at that number, the interviewer asked the person how to contact the sample member. If this query did not provide the information needed, the interviewer initiated tracing procedures, using all information available to call other contact persons in an attempt to locate the student. When all tracing options available to the interviewer were exhausted without success, the case was assigned to RTI's Tracing Operations Unit (TOPS) for intensive tracing.

c. Intensive tracing efforts

TOPS had access to both proprietary and public-domain data. It had real-time access to several consumer databases, which contained current address and phone listings for the majority of consumers with a credit history. In addition to the propriety databases, TOPS had access to various other information sources, such as data miners, commercial list houses, and NCOA via leased line. These sources provided the following searches: name, address, neighbor, business, phone matching searches, and status as decedent, incarcerated, incapacitated, or military personnel. TOPS employed these various information sources to locate respondents.

A two-tiered intensive-tracing plan was used to locate B&B sample members. The first tier involved identifying sample members with social security numbers (SSNs) and processing that information through consumer database searches. If a search generated a new telephone number, that case was sent back to CATI for telephone interviewing. If a new address was generated, but no telephone number, tracers called directory assistance or accessed other databases to obtain telephone numbers for CATI. This first level of effort minimized the time that cases were out of production.

All remaining cases (those lacking new information from the SSN search) underwent a more intensive level of tracing in the second tier. This approach involved the following procedures: (1) checking directory assistance for telephone listings at various addresses; (2) using electronic reverse-match databases to obtain the names and telephone numbers of neighbors and then calling the neighbors; (3) calling persons with the same unusual surname in small towns or rural areas to see if they were related to or knew the sample member; (4) contacting the current or last known residential sources such as the neighbors, landlords, current residents, tax assessors, realtors, and other business establishments related to previous addresses associated with the sample member; (5) calling colleges, military establishments, and correctional facilities to follow up on leads generated from other sources; and (6) checking various tracing Web sites. Tracers checked new leads produced by these tracing steps to confirm the addresses and telephone numbers for the sample members. When the information was confirmed, that case was returned to CATI for telephone interviewing. If the information could not be confirmed (e.g., there were no working telephone numbers or numbers for relevant neighborhood sources were unpublished), the case was reviewed by team leaders in TOPS and the RTI Telephone Survey Unit.

C. Data files

The final B&B:2000/01 field-test data file will be prepared in accordance with NCES-specified Electronic Codebook (ECB) format guidelines. Activities important to ensuring quality across data file preparation methods are described below.

1. Data availability throughout data collection period

During data collection, RTI consistently updated master data files containing completed case data. Batch processes included methods for extracting raw data from Computer-Assisted Survey Execution System (CASES) interview data files. A master data file structure was retained across all CATI applications in order to concatenate data into a single set of data containing all respondents. CATI data were extracted periodically to facilitate advance preparation of variable documentation. This also enabled review of frequency distributions and data analysis while data were still being collected.

2. Data editing

Data became available for editing during the data collection period, which allowed for feedback to the field on data quality and more accurate analysis of response data. As a quality check, the original skip logic was recreated to ensure that respondents followed the appropriate path within the CASES instruments. These edit checks were important for correcting errant paths that the interviewer may have followed but later corrected. Edit checks also ensured that for particular data elements, responses occurred logically. This process also allowed evaluation of the other case: when questions the respondent should have been asked were missed. Reserve codes indicated instances where raw data were updated to reflect the proper logical path. During data collection, interviewing staff was able to notify project staff of CATI irregularities via “problem sheets” so that problems in instrument logic could be corrected.

D. Instrument design

The B&B:2000/01 field test student telephone interviews were conducted using CATI technology. In preparation for the development of the CATI instrument, a comprehensive set of data elements was developed from a thorough review of the data elements used for the B&B:93 cohort, their relationship to the NPSAS:2000 data elements, and their relevance to current research and policy issues. A preliminary set of B&B:2000/01 data elements was refined with input from the study's Technical Review Panel (see appendix A for a list of members) as well as from NCES and other Department of Education staff. The final set of data elements, presented in appendix C, was approved by the Office of Management and Budget (OMB) before data collection started.

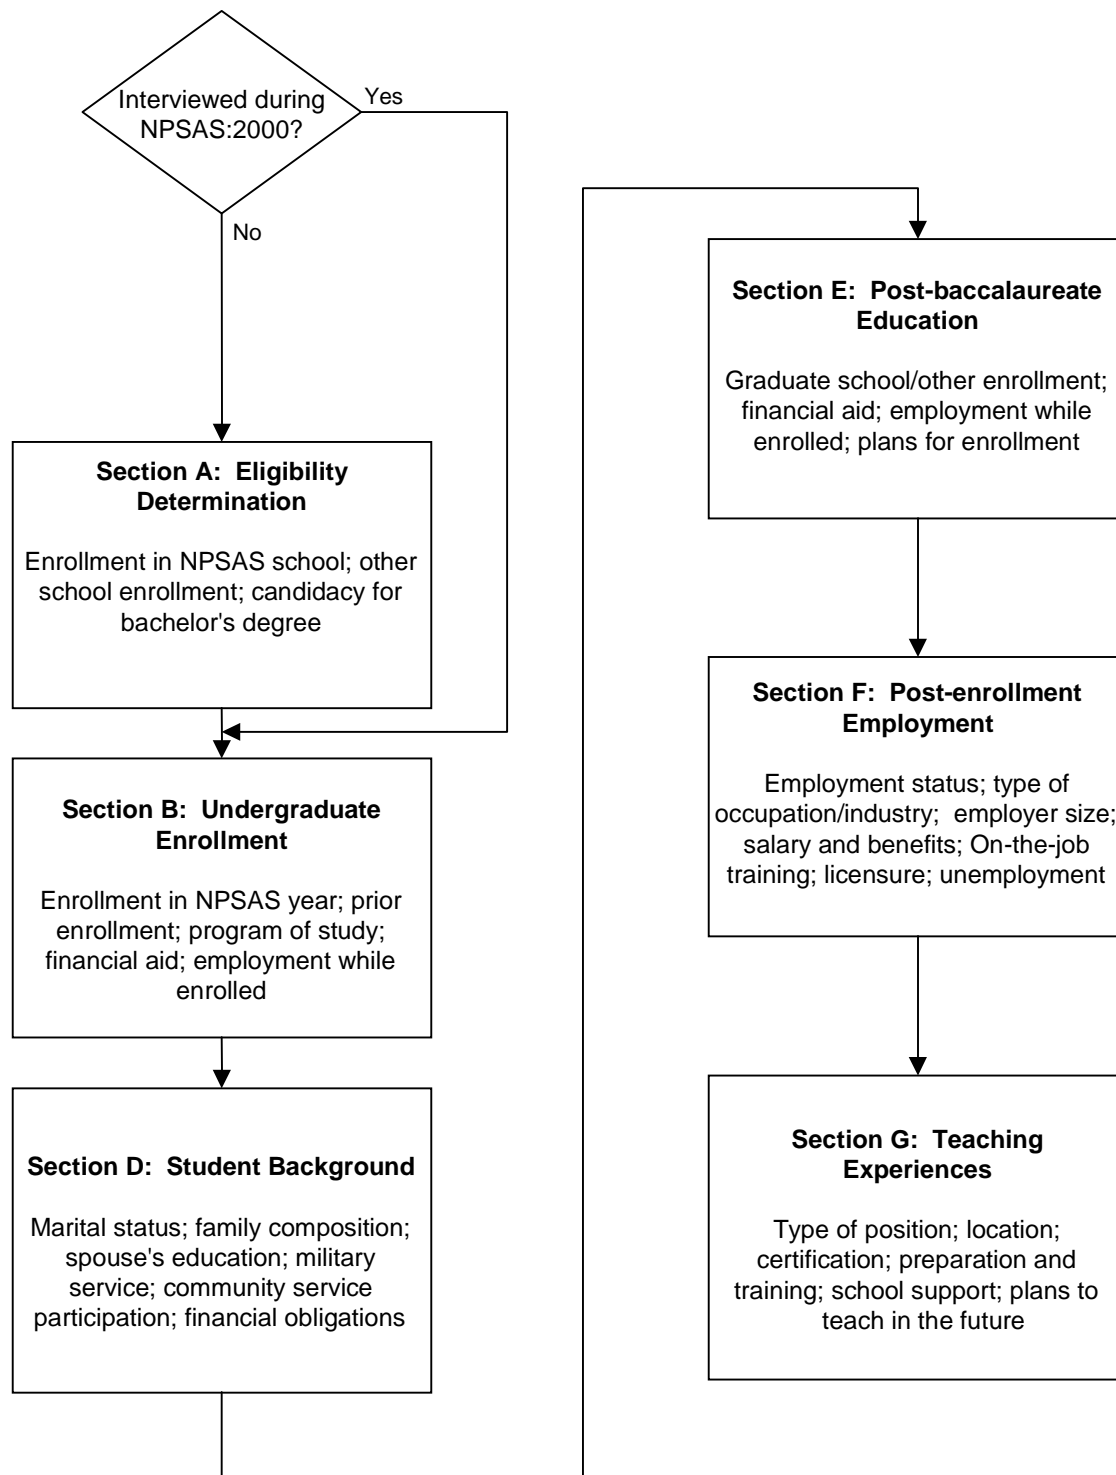

Based on the set of data elements, the CATI instrument was structured by identifying section topics and determining the progression of items within sections. Individual items were designed with several goals in mind: (1) using NPSAS:2000 and B&B:93/94 items when feasible; (2) ensuring consistency with NPSAS:2000 and B&B:93/94 items when items were not identical; and (3) identifying and preparing wording for item verifications and probes as necessary. Facsimile instruments are provided in appendix D.

Instrument sections were reviewed on a flow basis by NCES and by selected contractor and subcontractor staff. As depicted in figure 2.2, the first section determined eligibility for sample members who did not participate in NPSAS:2000. The following sections collected information pertaining to postsecondary enrollment since high school completion, respondent demographics, post-baccalaureate education and employment, and experiences with teaching.

To minimize the interview burden on respondents, the CATI instrument used existing data whenever feasible. Base-year data from the NPSAS:2000 field test interview were preloaded into the CATI interview; this dictated the flow of many portions of the interview. Certain questions were asked only if the data were missing from the prior interview.

The CATI interviews were programmed using CASES 4.3 software. The CATI system presented interviewers with screens of questions to be asked of the respondents, with the software guiding the interviewer and respondent through the interview, automatically skipping inapplicable questions based on prior response patterns. Wording for probing and verification was suggested when a respondent provided a response that was out of range for a given item. As the CATI instrument was being designed and programmed, instrument documentation was entered into an integrated data dictionary system (DDS), which subsequently enabled users to produce deliverable data files with CATI variable documentation. An abbreviated instrument was developed for the purpose of interviewing special respondent groups such as sample members whose primary language was Spanish. The facsimile abbreviated instrument, presented in appendix D, focused on the respondent's post-baccalaureate enrollment and work experiences.

Figure 2.2—Structure and flow of B&B:2000/01 follow-up field test student CATI

NOTE: All the original Section C items were moved to other sections. To avoid introducing confusion into the CATI programming, however, the remaining sections have not been relettered.

Once all CATI sections had been programmed, test cases were developed and preloaded for testing the instrument and for training telephone and field interviewers. Project staff and staff from NCES systematically tested the CATI instrument before the interviewer training. Finally, preload files containing data from NPSAS:2000 and the Department of Education databases were prepared and loaded into the CATI system to both guide the interview and assist sample member locating efforts. Data collection ensued only after all these tasks were complete.

E. Training of interviewers

The field test training program was designed to maximize the trainees' active participation. Training manuals included a training guide, an interviewer's manual, and a question-by-question specification manual. Training for telephone interviewers and supervisors was conducted in March 2000 and consisted of lectures, demonstrations, and hands-on practice exercises with the instrument and online coding modules. Trainees were introduced to the procedural aspects of conducting B&B:2000/01 and were given a thorough review of the questionnaire. Interviewers were also trained in techniques for gaining cooperation with sample members, parents, and other contacts, as well as techniques for addressing the concerns of reluctant participants and avoiding refusals. A copy of the training agenda and the table of contents from the training manual are located in appendix E.

F. Telephone interviewing

CATI locating and interviewing were conducted from March 28, 2000, through July 2, 2000. CATI procedures included attempts to locate, to gain cooperation from, and to interview study sample members by telephone. For NPSAS:2000 field test nonrespondents, NPSAS and B&B eligibility determination was also necessary. A reliability reinterview consisting of a subset of items from the full instrument was conducted for a subsample of respondents (79).

Locating information gleaned from the pre-CATI locating sources described above was preloaded for each case. Additionally, information previously collected through NPSAS:2000 was preloaded to personalize interviews and to reduce respondent burden.

An automated call-scheduler assigned cases in the CATI sample to interviewers based on time of day, day of week, existence of precise appointments, and type of case. Scheduler case assignment was designed to maximize the likelihood of contacting and interviewing sample members. Cases were assigned to various queues for this purpose. Some of the queues included new cases, Spanish-language cases, initial refusals, and various appointment queues (firm appointments set by the sample member, appointments suggested by locator sources, and appointments for cases which were initial refusals).

For each case, a calling roster determined the names and telephone numbers for the interviewers to call. The roster included school-provided and/or student-provided address information (student permanent, student local, parent, and other contacts) from the NPSAS:2000 field test. Up to six roster-lines were preloaded with contact information. New roster-lines were added as necessary during the field test as the result of CATI tracing and intensive tracing efforts.

Once located, some cases required special treatment. To gain cooperation from those who initially refused to participate (including locator sources who acted as “gatekeepers,” preventing access to the sample member), certain interviewers were trained in refusal conversion techniques. Sample members and their locator sources who spoke only Spanish, primarily located in Puerto Rico, were initially assigned to bilingual CATI interviewers.

G. Integrated management system (IMS)

All aspects of the study were under the control of an integrated management system (IMS) which consisted of several components, or modules::

- Management
- Receipt Control System (RCS)
- CATI
- Field Case Management System (FCMS)
- Assignment/Transfer System

This modular structure allowed for the streamlining of related tasks and resulted in a centralized, easily accessible repository for project data and documents.

The Management module of the IMS contained tools and strategies to assist the project staff and the NCES project officer in managing the study. All information pertinent to the study could be found here via the World Wide Web in a secure desktop environment: schedules, monthly progress reports, project plans and specifications, information related to the Technical Review Panel (TRP), and project deliverables. Also available in the management module was the latest version of the CATI instrument for testing and review, daily Receipt Control System (RCS) module status reports, and daily data collection reports.

The RCS module monitored activities related to data collection, including tracing and locating, thereby enabling project staff to perform stage-specific activities, track case status closely, identify problems early, and implement solutions effectively. Several applications used the RCS’s locator data for daily tasks: The mailout program produced mailings to parent/contacts and sample members, the query system enabled administrators to review the locator information and status for a particular case, and the mail return system enabled project staff to update the locator database as mailings or reply sheets were returned or forwarded. The RCS also interacted with the Tracing operation system database, sending locator data between the two systems as necessary.

The CATI module managed development of the CATI instrument within the DDS. The DDS consisted of a set of linked relational files and associated utilities for developing and documenting the instrument. Developing the CATI instrument with the DDS ensured that all variables were linked to their item/screen wording and were thoroughly documented. Also

included within the CATI module was online coding software (“user exits”) that collected detail on schools attended, enrollment, industry, occupation, and field of study.

The Field Case Management System (FCMS) module facilitated activities performed by the field interviewers. The FCMS allowed field staff to conduct tracing and personal interviewing activities, to communicate with RTI staff via electronic mail, to transmit completed cases, to receive new cases, and to transmit production time and expense (PT&E) data back to RTI.

The Web-based Assignment/Transfer System enabled the field supervisor to make all case assignments to field interviewers as well as to track progress of cases being worked in the field.

H. Methodological experiments and evaluation approaches

1. Purpose of evaluation procedures

Evaluating field test procedures can lead to improved procedures for the subsequent full-scale study. Each major component of the field test was evaluated. The methodology consisted of both formative and summative evaluations. Formative evaluations were of an ongoing nature, designed to assess tasks at intermediate stages so that the effects of employing alternate methodologies could be analyzed and modifications could be made and assessed before the affected task was completed. Summative evaluations will be used to optimize procedures in the full-scale study. A summary of B&B:2000/01 field test evaluations that were planned and implemented is provided in table 2.6.

Various measures were employed to assess the quality of data collection, including quality assurance (or quantitative) monitoring, qualitative monitoring, and quality circle meetings. The primary objective was to pinpoint any problems with the questionnaire and correct them early in data collection. Quality assurance monitoring assessed the quality of the telephone interviewing, with respect to question delivery and coding of responses. It is explained in greater detail in chapter 4. Qualitative monitoring evaluated whether interviewing procedures were implemented as intended and were effective. The utility of the interview items was also assessed. On occasion, monitoring revealed the need for individual interviewer retraining (e.g., better explanation of the nature of the study, or techniques for refusal avoidance) which was conducted immediately. Weekly quality circle meetings—during which interviewers, supervisors, and project technical staff met to discuss data collection issues—proved valuable in identifying problems with the instrument as well as in building rapport among interviewers and technical staff. Summaries of the meetings were rapidly disseminated to all interviewers and supervisors so that those who were unable to attend also benefited.

The study design included a component for direct evaluation of data quality. A reliability reinterview was administered to a randomly selected subsample of field test respondents to assess the short-term stability of selected items. The results of the reinterview analysis are presented in chapter 4.

Table 2.6—Summary of planned B&B:2000/01 field test evaluations

Major area of evaluation	Evaluation approaches
CATI instrument development	<ul style="list-style-type: none"> • Debrief instrument “testers/debuggers” to determine appropriateness and accuracy of instrument flow/logic.
Training	<ul style="list-style-type: none"> • Debrief CATI supervisors and interviewers. Debrief field supervisors and field locators/interviewers.
Centralized tracing activities	<ul style="list-style-type: none"> • Debrief tracing staff and supervisors. Analyze all levels of tracing results and costs. • Analyze outcomes and costs/benefits of CATI-external tracing activities.
CATI administration/ data quality	<ul style="list-style-type: none"> • Analyze silent monitoring quality control data. Analyze CATI operational parameters (e.g., numbers of calls per case, total interviewer hours per completed interview). • Debrief interviewers, refusal converters, bilingual interviewers, monitors, and supervisors. • Analyze administration time statistics, overall, within section, and for individual questions and blocks of questions. • Analyze rates of interview nonresponse, early and subsequent break-off, types of response inconsistencies detected during interview administration, and nonresponse patterns. • Analyze effect of prior receipt of financial incentive on response rates. • Analyze response reliability of reinterviews for selected items (subsample). • Assess feedback from mock interviews conducted with TRP members. • Compare estimates for selected variables between CATI respondents and nonrespondents.
Online coding	<ul style="list-style-type: none"> • Analyze success/accuracy of online coding of IPEDS code, industry/occupation, and major course of study.
File development	<ul style="list-style-type: none"> • Observe and document any procedural difficulties encountered in preparation of raw CATI files.

2. Incentive experiment

The field test included a methodological experiment to determine if respondents who received an incentive to participate in the base year study (NPSAS:2000 field test) would demand an incentive to participate in the B&B:2000/01 follow-up study. The assessment was a follow-up to the incentive experiment conducted as part of the NPSAS:2000 field test.

The NPSAS:2000 field test included an investigation of the impact on response rates of offering financial incentives to selected sample members, based on their survey status. Offers of financial incentives proved effective in enhancing response rates for particular categories of sample members (e.g., preliminary refusals) and was approved for use in the full-scale NPSAS survey. The experiment implemented as part of the B&B:2000/01 field test was designed to answer a series of additional questions pertaining to the B&B cohort. It was particularly important to determine what impact, if any, the offer of a financial incentive during the base year of a longitudinal survey may have on the likelihood of sample members' response to the subsequent follow-up survey. Specifically:

- What percentage of the sample members who were mailed an incentive during the NPSAS field test would inquire about an incentive in the B&B follow-up?
- Among those who inquired about an incentive, what percentage would agree (or not agree) to do the survey in the absence of an incentive?
- What percentage would agree (or not agree) to participate in the follow-up survey if initially offered the same incentive as in the base year?

Overall, 183 B&B sample members were sent an incentive mailing, including \$5, during the NPSAS field test. Of those, 132 completed the interview and received an additional \$15 incentive payment, while the remaining 51 did not complete the interview (25 were located in NPSAS but refused or time ran out; and the remaining 26 were not located in NPSAS). The B&B incentive experiment focused *only* on those 183 sample members who were mailed an incentive during the NPSAS field test (whether they completed the interview or not). It is important to decide how to handle these students in the full-scale B&B follow-up study.

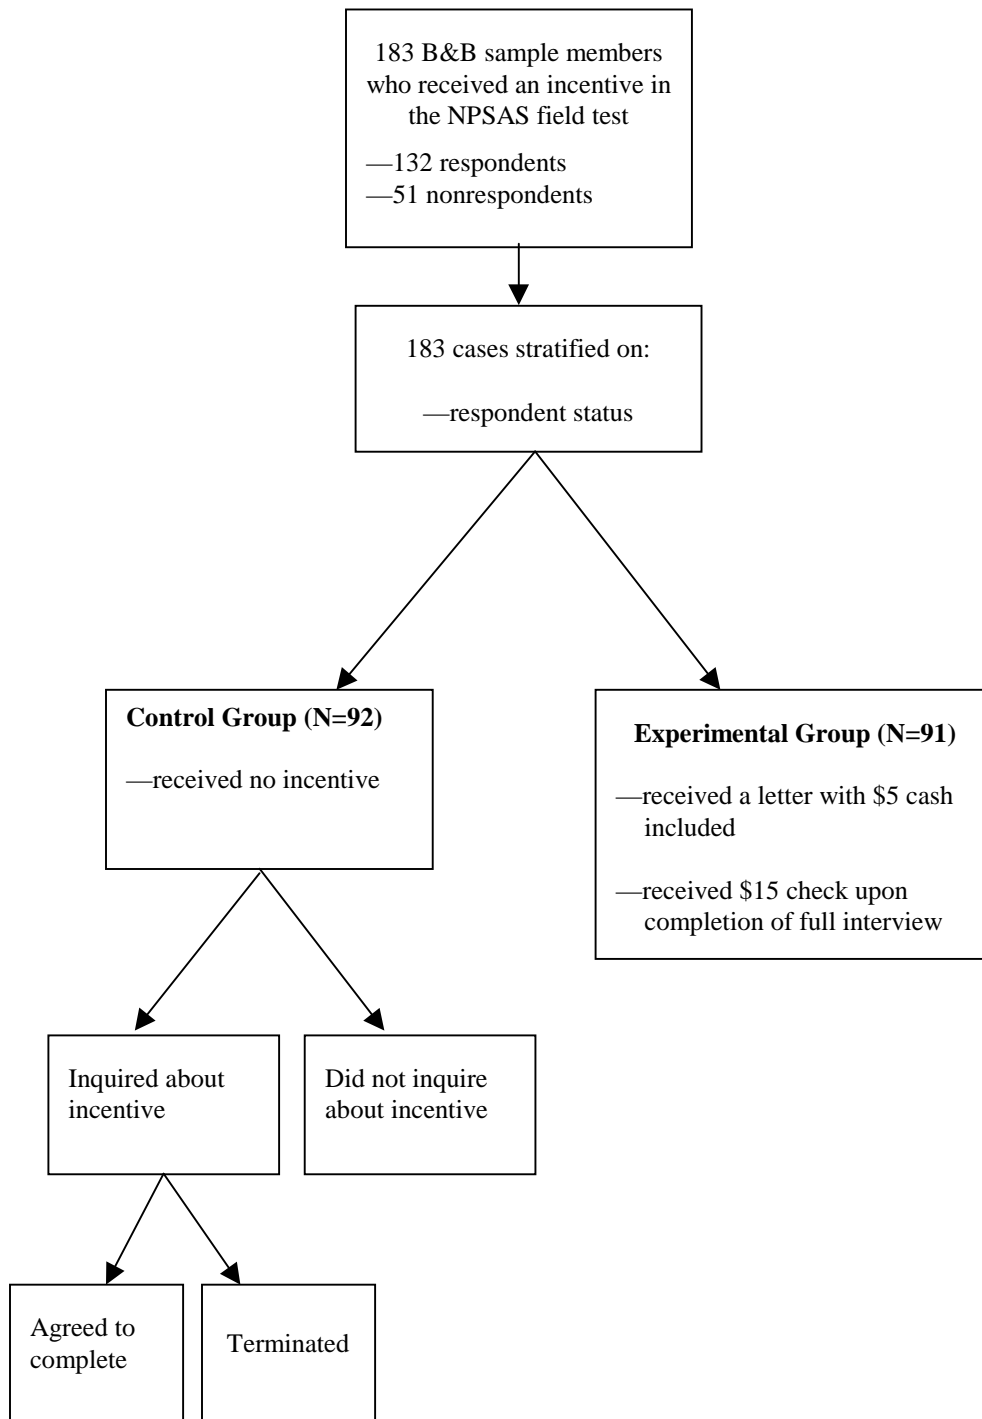

A split-sample experimental design was implemented as part of the B&B follow-up field test (see figure 2.3):

- (1) The 183 sample members who were mailed an incentive letter as part of the NPSAS data collection effort were stratified by respondent/nonrespondent status, school level, and school control.
- (2) Based upon this stratification, cases were allocated to a "control" group or an "experimental" group so that the two groups were identical in terms of respondent status, school level, and school control characteristics. A variable denoting the sample members' experiment status (control or treatment) was preloaded into the CATI system.
- (3) The offering of the incentive (or lack thereof) was presented to the sample members as follows:

- Sample members in the “experimental” or “treatment” group received an incentive letter with \$5 cash. The letter explained the study and informed the sample members that they would receive a check for an additional \$15 upon completion of the full interview. The letters were sent via express mail approximately 7 days after the initial student mailing was sent.
- Sample members in the “control” group did not receive an incentive mailing (they did, however, receive the initial student lead letter and information leaflet sent to all sample members). Sample members who inquired about the incentive during an interview were told: “I’m sorry, but for this study we are not offering an incentive payment.” The interviewer then recorded whether the sample member agreed to continue the interview or terminated the interview.

Results of this experiment are presented in Chapter 3.

Chapter 3

Data Collection Outcomes

A. Locating Outcomes

1. Student locating and interviewing

The conduct of interviews for list-based sample surveys such as B&B:2000/01 involves two sequential steps: locating (identifying an initial telephone number at which the sample member can be reached) and interviewing (convincing the sample member to cooperate and conducting the interview). The level of time and effort required to complete these steps with sample members can vary considerably. Some sample members may be reached and interviewed on the first attempt at contact. Others may require considerable tracing (contacting of parents, former roommates, etc.) before they are successfully located and interviewed.

The time allowed for the B&B:2000/01 field test was more limited than will be the case in the full-scale survey. Therefore, procedures for those most difficult to locate and interview were constricted, with consequent adverse impact on final locating and CATI response rates.

However, a relatively high percentage of sample members were located and interviewed as part of the B&B:2000/01 field test, given the time constraints associated with conducting a field test. This is at least partially because the B&B:2000/01 field test is a relatively quick follow-up. Base-year data were collected for respondents only one year earlier, which aids the success of locating efforts. Even for this highly mobile population of recent college graduates, locating is much easier one year after initial contact than in a later follow-up.

a. Lead letter and locator mailing to students

One week before the start of data collection for the field test, sample members were sent an advance mailing that included an address update sheet. Each sample member was asked to review, correct, and return the sheet. Letters were mailed to 706 sample members, with 149 cases out of a total sample of 855 unmailed because of incomplete address information. Of these 706 sample member letters, 115 address update sheets with new or confirmed information were received (14 percent of the total sample).

b. Results of locating and interviewing effort

Figure 3.1 presents a schematic of the outcomes of student locating and interviewing and related case-resolution activities. Student interview data were collected exclusively by CATI. No field interviewing or questionnaire mailings were conducted as part of the field test. Data collection for the field test lasted approximately 14 weeks, from March 28 through July 2, 2000.

As shown in figure 3.1, attempts were made to locate 855 student sample members. Overall, 769 (90 percent) were located, 71 (8 percent) were *not* located, 6 (<1 percent) were considered “exclusions,”¹ and 9 (1 percent) were determined to be ineligible for the study based on their responses to the eligibility questions in the questionnaire.

Student interviewing results are also shown schematically in figure 3.1. A total of 695 (of the 840 remaining cases after removing the exclusions) were interviewed. The majority of these cases (662) completed the entire interview, while 33 completed only a partial or abbreviated interview. A small number of the partial interviews (4) were classified as such because the respondent broke off after completing part of the interview. A break-off represented an explicit or implicit refusal or the arising of some other matter requiring the attention of the respondent, but such cases could not be converted or recontacted to complete the interview by the end of the data collection period. A substantial number (29) of these partial interviews, however, resulted from the administration of an abbreviated interview that consisted of a minimal set of questions from the full interview. Over half of this group represented interviews with Spanish-speaking respondents.

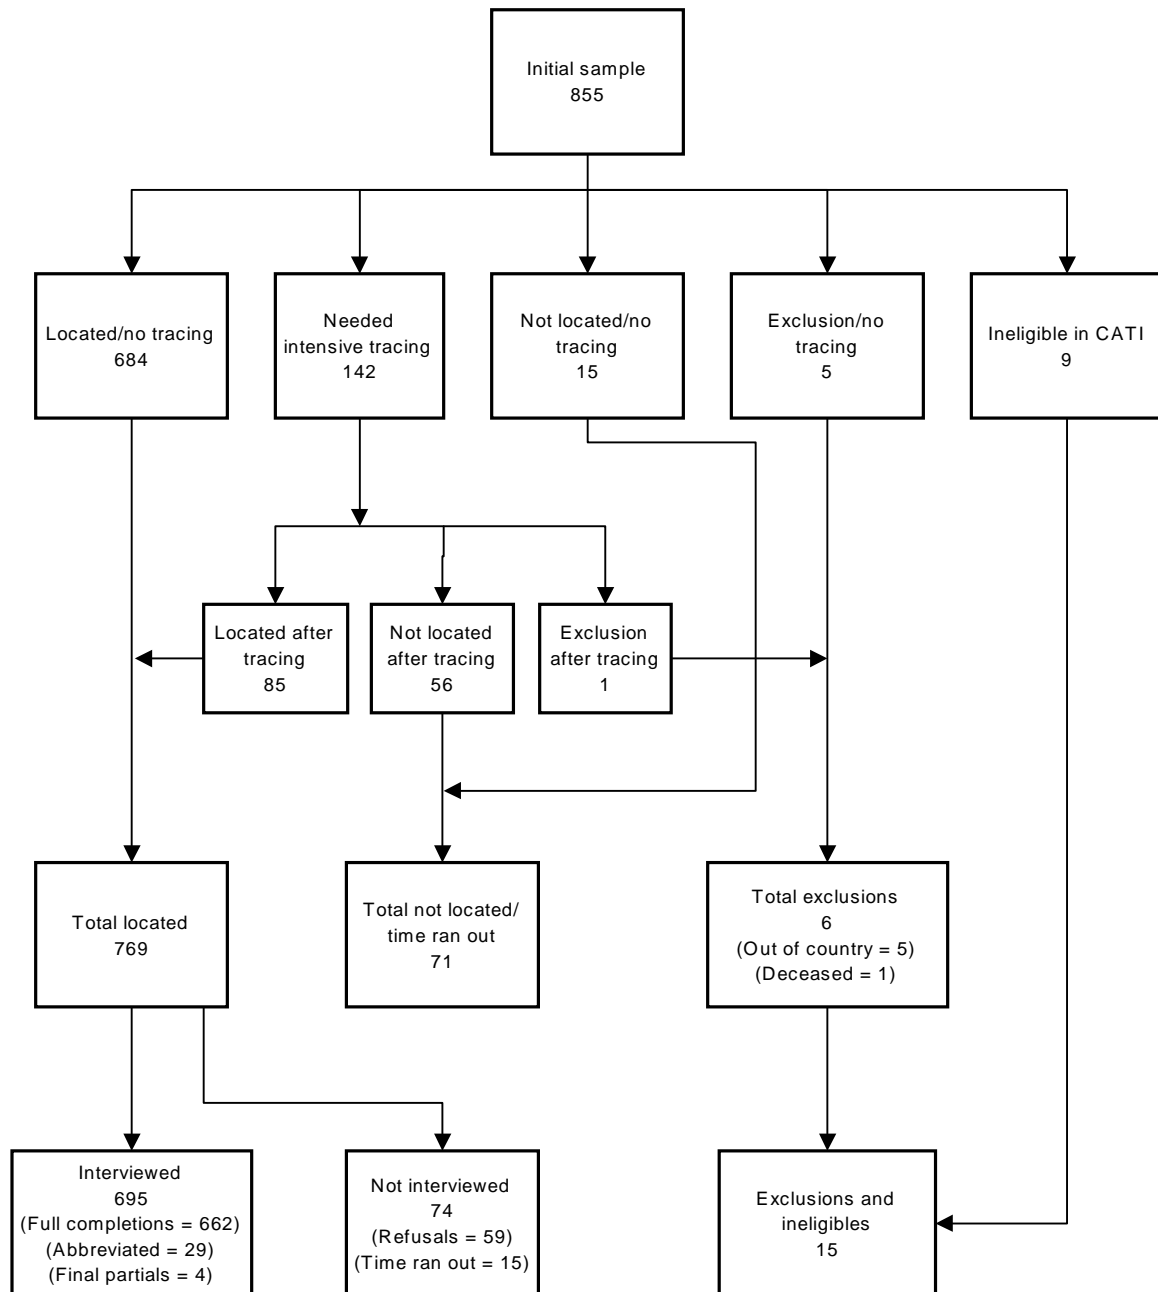

Of the remaining 160 cases not interviewed, 71 were not located. A total of 74 potentially eligible students who were located were not interviewed. Of these, 59 were explicit final refusals for which subsequent attempts at interviewing were determined to be infeasible or unwise. Not interviewed cases also included 15 sample members for whom time ran out before they could complete the interview; such cases clearly reflect, at least in part, the constricted data collection period.²

An overall student CATI response rate for the B&B:2000/01 field test can be calculated as the number of respondents interviewed divided by the initial sample size minus the exclusions:

$$\text{Student CATI response rate} = 695 / (855 - 15) = 82.7 \text{ percent.}$$

¹ B&B exclusion cases consisted of those whose status (generally obtained through some contacted third party) was determined to be such that attempts at locating/interviewing them during the CATI operational period would be futile. The designation “exclusions” indicates that, even though the status of the case was successfully resolved, such cases were considered “out-of-scope” for locating and interviewing operations. Among the six B&B:2000/01 field test sample members classified as exclusions, five were determined to be out of the country for the duration of the data collection period and one sample member was verified as deceased.

² This group likely contained an unknown number of implicit refusal cases—i.e., individuals who after first contact used answering machines or friends/relatives as gatekeepers, as well as those who continued to make (and then break) appointments for an interview “in the future.”

Figure 3.1—NPSAS:2000 field test result flow of locating/interviewing activities

NOTE: Final sample including interviewed, not interviewed, and not located = 840.

SOURCE: U.S. Department of Education, National Center for Education Statistics, Baccalaureate and Beyond Longitudinal Study:2000/01 field test.

c. Locating and response rates for base-year respondents and nonrespondents

Table 3.1 provides results for the B&B:2000/01 field test student locating and interviewing (for those located) by respondent status in the base-year study (NPSAS:2000 field test).³ Some significant differences in locating and interviewing rates are evident. In terms of locating, just over 94 percent of the NPSAS field test respondents were located, compared to approximately 74 percent of NPSAS nonrespondents. There were also differences in interview rates among the two groups. Among base-year respondents, 93 percent of the located sample members successfully completed interviews during the B&B follow-up field test. The interview rate was nearly 30 percent lower for NPSAS:2000 field test nonrespondents, with 66 percent of the located sample members completing interviews.

Table 3.1—B&B:2000/01 field test student locating and interview results, by respondent status in the NPSAS:2000 field test

NPSAS:2000 respondent status	Total respondents	Located		Interviewed, given locate	
		Number	Percent	Number	Percent
Total:	840	769	91.5	695	90.4
NPSAS:2000 field test respondent	725	684	94.3	639	93.4
NPSAS:2000 field test nonrespondent	115	85	73.9	56	65.9

NOTE: Statistics exclude nine B&B-ineligible sample members (as determined in CATI) and six sample members who were either out of the country during the field test or confirmed as deceased.

SOURCE: U.S. Department of Education, National Center for Education Statistics, Baccalaureate and Beyond Longitudinal Study:2000/01 field test.

As shown in table 3.2, nearly one-quarter (23.6 percent) of the completed interviews for the B&B field test were obtained during the first week of interviewing. By the end of the third week of data collection, over half (51.4 percent) of the interviews had been completed. After that, the locating and interviewing effort was much more difficult and time consuming, with the remaining interviews being collected over the last 11 weeks of data collection.

³The statistics in table 3.1 exclude the nine B&B:2000/01 ineligible sample members determined during CATI interviewing and the six exclusions; they do not exclude any potential ineligible likely to be part of the unlocatables.

Table 3.2–B&B:2000/01 field test response rates, by number of weeks worked¹

Number of weeks of data collection ²	Weekly number complete	Weekly percent complete	Cumulative number complete	Cumulative percent complete
Total	695	100.0	695	100.0
1	164	23.6	164	23.6
2	130	18.7	294	42.3
3	63	9.1	357	51.4
4	36	5.2	393	56.6
5	58	8.4	451	65.0
6	29	4.2	480	69.2
7	27	3.9	507	73.1
8	33	4.8	540	77.9
9	11	1.5	551	79.4
10	27	3.9	578	83.3
11	55	7.9	633	91.2
12	18	2.5	651	93.7
13	28	4.0	679	97.7
14	16	2.3	695	100.0

¹Statistics in table 3.2 exclude nine B&B:2000/01 ineligible sample members and six sample members who were either out of the country for the duration of the field test or were deceased.

²Number of weeks of data collection is based on the number of weeks between the date data collection began and the final day of data collection.

SOURCE: U.S. Department of Education, National Center for Education Statistics, Baccalaureate and Beyond Longitudinal Study:2000/01 field test.

d. Source of locating information for completed interviews

Locating students in a longitudinal study to interview them is a complex task requiring multiple sources of information. Leads developed through one source may need to be verified using another data source or locating technique.

Table 3.3 presents the original source of the telephone number at which the interview was completed. Tracing leads obtained via telephone during CATI data collection were the most important sources of these numbers, accounting for 211 of the final 695 completed interviews, or 30 percent. The remaining 70 percent came from a variety of other sources, including locating information collected during the base-year (NPSAS:2000) study (28.4 percent), pre-data-collection activities using NCOA or Telematch address and telephone number processing (23.3 percent), returns from student prenotification letters (9.2 percent), centralized tracing by TOPS (5.6 percent), and, finally, student call-ins to the study's toll-free number (3.2 percent).

Table 3.3—B&B:2000/01 field test source of locating information for completed interview

Locating source	Number of cases	Percent of cases
Total	695	100.0
New information via CATI	211	30.4
NPSAS:2000 locating information	197	28.4
National Change of Address/Telematch	162	23.3
Student mailing	64	9.2
Intensive tracing	39	5.6
Respondent call-in from new number	22	3.2

NOTE: This table indicates the number and percent of cases completed, by the source that first produced the telephone number or address at which the interview was completed.

SOURCE: U.S. Department of Education, National Center for Education Statistics, Baccalaureate and Beyond Longitudinal Study:2000/01 field test.

e. Student prenotification letter and address updates

Not surprisingly, student contact and interview rates varied considerably based on whether or not sample members returned the address/telephone update sheet sent to them as part of the prenotification mailing (see table 3.4). While the return rate for these sheets was modest (with 114 of 840 eligible sample members returning update sheets, or 13 percent), the contact and interview rates for those who did return the forms was nearly universal. Of the 114 sample members who returned an update sheet, 113 were located by interviewers. Among those cases, 110 (97.4 percent) completed the field test interview. The four who did not complete the interview were refusals. In short, while the percentage of update forms returned was relatively low, the contact and interview rates among those who did return such forms was extremely high.

Table 3.4—B&B:2000/01 field test locate and interview rates, by student return of address update form

Student mailing status	Total respondents	Contacted		Interviewed, given contact	
		Number	Percent	Number	Percent
Total	840	769	91.5	695	90.4
Returned update form	114	113	99.1	110	97.4
No update form returned	726	656	90.4	585	89.2

NOTE: Statistics exclude nine B&B-ineligible sample members (as determined in CATI) and six sample members who were either out of the country during the field test or confirmed as deceased.

SOURCE: U.S. Department of Education, National Center for Education Statistics, Baccalaureate and Beyond Longitudinal Study:2000/01 field test.

f. E-mail contact with sample members

As part of the B&B:2000/01 field test effort, the use of e-mail as a means of contacting otherwise hard-to-reach sample members (i.e., those requiring 10 or more call attempts) was evaluated. E-mail addresses were collected from sample members both during the base year interview (NPSAS:2000) and as part of the update sheets sent to sample members. Approximately 8 weeks into data collection, these e-mail addresses were used to contact sample members who had not yet completed the B&B:2000/01 field test interview. The e-mail message briefly described the study, indicated our previous attempts to reach the sample member, and encouraged the student to contact us via telephone or e-mail to complete the survey or to establish a date and time for an interviewer to call. By this stage of data collection, there were 73 sample members for whom we had a valid e-mail address (i.e., we had an e-mail address and when the message was sent it was not returned as “undeliverable”—the sign of a “bad” e-mail address). Among these, 61 (83.6 percent) were ultimately located and nearly 87 percent of those contacted completed the interview (see table 3.5). E-mail appears to have been an effective mode of communication for establishing contact with otherwise hard-to-reach sample members.

Table 3.5—B&B:2000/01 field test locate and interview rates, by e-mail status

E-mail status	Total respondents	Contacted		Interviewed, given contact	
		Number	Percent	Number	Percent
Total	840	769	91.5	695	90.4
Had valid e-mail address	73	61	83.6	53	86.9
No e-mail address	767	708	92.3	642	90.7

NOTE: Statistics exclude nine B&B-ineligible sample members (as determined in CATI) and six sample members who were either out of the country during the field test or confirmed as deceased.

SOURCE: U.S. Department of Education, National Center for Education Statistics, Baccalaureate and Beyond Longitudinal Study:2000/01 field test.

g. Intensive locating during data collection

Intensive tracing efforts were required for cases in which preloaded CATI locating information failed to result in contact with the sample member. These intensive tracing activities were as follows.

- Cases with valid addresses that were not located during the CATI operations were sent to FastData for telephone number updates. New information was then returned to CATI for further follow-up.
- Cases returned from FastData without additional information were assigned to TOPS for intensive tracing.
- Cases without valid mailing addresses were also assigned to receive intensive tracing from TOPS.

The final locate and interview rates for cases requiring centralized tracing are provided in table 3.6. Of the 141 cases sent to the tracing unit for intensive locating efforts, 85 were located (60.3 percent) and, of those located, nearly 85 percent were interviewed. In sum, although not all sample members were found using centralized tracing techniques, these techniques did result in contracts for a majority of the cases in which they were used.

Table 3.6—B&B:2000/01 field test contact and interview rates, by intensive tracing efforts

Tracing status	Total respondents	Contacted		Interviewed, given contact	
		Number	Percent	Number	Percent
Total	840	769	91.5	695	90.4
No intensive tracing required	699	684	97.9	623	91.1
Intensive tracing required	141	85	60.3	72	84.7

SOURCE: U.S. Department of Education, National Center for Education Statistics, Baccalaureate and Beyond Longitudinal Study:2000/01 field test.

NOTE: Statistics exclude nine B&B-ineligible sample members (as determined in CATI) and six sample members who were either out of the country during the field test or confirmed as deceased.

For hard-to-locate sample members, generally no single source of information is adequate to achieve the level of locating required. Rather, a successful locating effort requires blending multiple sources of information. Centralized tracing was conducted as part of the field test for cases in which telephone leads were exhausted during the CATI phase of data collection. Table 3.7 provides an overview of the sources used during intensive tracing of the hard-to-reach B&B:2000/01 field test sample members. Note that although the table provides information on the number and percent of sample members who were ultimately located when a particular source was used, most of the cases were traced using multiple sources.

Table 3.7—B&B:2000/01 field test locate rates, by tracing source used during intensive tracing efforts

Tracing source	Cases involving intensive tracing		
	Total	Respondents located	
		Number	Percent
Consumer database search	137	83	60.6
Directory assistance	118	69	58.5
Database – address search	82	45	54.9
Database – reverse phone lookup	57	31	54.4
Database - name search	66	31	47.0
Internet search	53	23	43.4
Database – neighbor search	18	4	22.2

NOTE: Most cases were traced using multiple sources so numbers and percentages add up to more than the total.

SOURCE: U.S. Department of Education, National Center for Education Statistics, Baccalaureate and Beyond Longitudinal Study:2000/01 field test.

Contact was made with sample members in 61 percent of the cases where information from consumer databases was used as part of the locating effort. Directory assistance was a factor in locating about the same percentage of hard-to-locate sample members (58.5 percent). Over half of the cases for which address search databases (54.9 percent) or reverse telephone look-ups (54.4 percent) were used resulted in contact with a sample member.

If more extensive searches were required (such as generic database name searches or Internet searches), the percentage of sample members located was reduced. These techniques were used only if previous search efforts failed to provide sufficient locating information. Fewer than half of those cases for whom these more extensive tracing techniques were required were ultimately located (47 percent for name searches and 43.4 percent for Internet searches). Finally, just one in five (22.2 percent) of those for whom neighbor searches were required were located.⁴

2. Refusal conversion efforts

Refusal conversion procedures were used to gain cooperation from individuals who refused to participate when contacted by telephone interviewers. Refusals came not only from sample members, but also from spouses, housemates, parents, and other gatekeepers. When either a sample member or a gatekeeper refused to participate in the locating or interviewing effort, the case was referred to a specially trained refusal-conversion specialist in the Telephone Survey Unit. There were 195 initial refusals among the field test sample (23 percent of the initially fielded sample of 855). Most refusals came from sample members (122 refusals), although 73 refusals were by other contacted individuals (see table 3.8). In all, 59 percent of the cases with initial refusals were successfully converted into completed interviews. The conversion rate was 52 percent among refusing sample members.

Table 3.8—B&B:2000/01 field test conversion of initial refusals, by source of refusal

Who refused	Number of initial refusals	Respondents interviewed, given initial refusal	
		Number	Percent
Total	195	114	58.5
Sample member	122	63	51.6
Other individual	73	51	69.9

SOURCE: U.S. Department of Education, National Center for Education Statistics, Baccalaureate and Beyond Longitudinal Study:2000/01 field test.

The success of converting refusals varied according to the sample member's response status in the base-year study (see table 3.9). Among respondents to the NPSAS:2000 field test interview, 68 percent of the sample members who initially refused to be interviewed (or whose gatekeeper refused) ultimately completed the B&B:2000/01 field test interview. In contrast, only 26 percent of the base-year nonrespondents were successfully converted.

⁴ Neighbor searches involve the use of databases to identify the addresses and telephone numbers of properties or apartments located in close proximity to the sample member's last known address. The assumption is that these are current or former neighbors who may be able to provide current locating information for the sample member.

Table 3.9—B&B:2000/01 field test conversion of initial refusals, by respondent status in NPSAS:2000 field test

NPSAS:2000 field test respondent status	Number of initial refusals	Respondents interviewed, given initial refusal	
		Number	Percent
Total	195	114	58.5
Respondent	152	103	67.8
Nonrespondent	53	11	25.6

SOURCE: U.S. Department of Education, National Center for Education Statistics, Baccalaureate and Beyond Longitudinal Study:2000/01 field test.

3. Reliability reinterview

A subsample of eligible sample members who completed the B&B:2000/01 field test interview was selected to participate in a reliability reinterview, containing a subset of items from the initial interview. A random selection algorithm was programmed directly into the CATI instrument. Sample members selected for the reinterview were informed of their selection at the end of the initial interview and allowed an opportunity to agree to the reinterview or to refuse it at that time.

A total of 83 respondents were selected for the reliability reinterview. Due to the built-in delay in administering the reinterview (a delay of approximately 3–4 weeks from the initial interview) and the need to complete reinterviews during the same time frame as the field test interview, those selected for reinterview were more likely to be those sampled and interviewed early during the data collection period for the field test. Such individuals were those most easily located and convinced to participate in the initial interview. Consequently, the reported agreement and reinterview rates are probably higher than if the reinterview respondents had been sampled subsequent to the initial data collection effort.

4. Interview burden and effort

This section of the field test report reviews the effort and burden associated with the B&B:2000/01 field test student interview. We examine the interview's length by considering the timing analysis statistics. This information is useful because it provides evidence that can reduce respondent burden, reduce data collection effort and cost, and improve data quality. Then we consider the effort required to locate and interview sample members for the study using the average interview time.

During CATI instrument development, project staff embedded time stamps at the start and end of the interview, as well as the beginning and end of each interview screen, which could include up to eight related items. The time stamps measured the elapsed time to complete each segment of the interview, and enabled project staff to monitor the time required to complete specific interview items, the online coding programs, sections of the interview, and the entire interview.

The time (in minutes) needed to conduct a student interview is shown by interview section in table 3.10. Sections are listed in the table in the order in which they were presented. Certain sections of the interview applied to selected groups of respondents (see figure 2.2,) so timing results are presented for the overall cohort, and by subgroup. For example, Section A was designed for base-year nonrespondents, so the number of cases in that group was less than for the rest of the instrument. Respondents who were currently teaching skipped the post-baccalaureate employment section and proceeded directly to the teaching section.

Table 3.10 presents timing results for the B&B:2000/01 field test cohort. Overall average administration time to complete the student interview was 18 minutes. There was no difference in average completion time due to base-year response status (see table 3.11). Both respondents and nonrespondents to the NPSAS:2000 field test took an average of 18 minutes to complete the interview.⁵ For respondents who had taught since graduating (see table 3.12), the average interview time was 21 minutes compared to 17 minutes for those who had not taught.

The Technical Review Panel reviewed the administration time and then recommended certain items for deletion in the full-scale study. Items to be excluded typically showed a lack of temporal stability or extremely low variance of responses (see chapter 5).

Interview administration time, however, reflected only a small fraction of the time required to obtain a completed interview. Time was spent by locator/interviewers in locating, scheduling call-backs, attempting refusal conversion, and other related activities. This time was spent whether or not interviews were obtained. The average locator/interviewer time requirement for each completed interview was slightly more than 2 hours.

Table 3.10—Average minutes to complete B&B:2000/01 field test student interview, by interview section

CATI section ¹	Average time	Number of cases
Section A – eligibility determination for NPSAS non-respondents	0.48	50
Section B – enrollment history	5.38	665
Section D – student background	2.93	663
Section E – post-baccalaureate education	2.64	665
Section F – employment/income	4.66	663
Section G – teaching experiences	2.40	662
Total interview	18.22	666

¹All the original Section C items were moved to other sections. To avoid introducing confusion into the CATI programming, however, the remaining sections have not been relettered.

NOTE: A section was considered complete if the amount of time to complete the section was greater than zero and the section completion flag was set. Section outliers were removed from the timing calculations (2 in section A, 1 in section B, 3 in section D, 1 in section F, and 2 in section G).

SOURCE: U.S. Department of Education, National Center for Education Statistics, Baccalaureate and Beyond Longitudinal Study:2000/01 field test.

⁵ Although base-year nonrespondents had to complete an extra section (to determine study eligibility,) the average time was actually shorter than for base-year respondents. However, the eligibility determination items were very short, and the number of cases who went through the eligibility determination section was very small relative to the total number of respondents.

Table 3.11—Average minutes to complete B&B:2000/01 field test student interview, by interview section and NPSAS:2000 response status

CATI section ¹	Total		NPSAS:2000 field test nonrespondent		NPSAS:2000 field test respondent	
	Average time	Number of cases	Average time	Number of cases	Average time	Number of cases
Section A – eligibility determination for NPSAS nonrespondents	0.48	50	0.48	50	()	0
Section B – enrollment history	5.38	665	5.50	52	5.37	613
Section D – student background	2.93	663	2.73	51	2.95	612
Section E – post-baccalaureate education	2.64	665	2.09	52	2.69	613
Section F – employment/income	4.66	663	4.80	52	4.65	611
Section G – teaching experiences	2.40	662	1.99	52	2.44	610
Total interview	18.22	666	17.84	52	18.26	614

[†] Not applicable.

¹ All the original Section C items were moved to other sections. To avoid introducing confusion into the CATI programming, however, the remaining sections have not been relettered.

NOTE: A section was considered complete if the amount of time to complete the section was greater than zero and the section completion flag was set. Section outliers were removed from the timing calculations (2 in section A, 1 in section B, 3 in section D, 1 in section F, and 2 in section G).

Table 3.12—Average minutes to complete B&B:2000/01 field test student interview, by interview section and teaching status

CATI section ¹	Total		B&B:2000/01 field test nonteachers		B&B:2000/01 field test teachers	
	Average time	Number of cases	Average time	Number of cases	Average time	Number of cases
Section A – eligibility determination for NPSAS nonrespondents	0.48	50	0.46	40	0.59	10
Section B – enrollment history	5.38	665	5.25	504	5.80	161
Student background	2.93	663	2.88	504	3.08	159
Section E – post-baccalaureate education	2.64	665	2.58	504	2.84	161
Section F – employment/income	4.66	663	5.78	502	1.19	161
Section G – teaching experiences	2.40	662	0.80	502	7.44	160
Total interview	18.22	666	17.47	505	20.58	161

¹ All the original Section C items were moved to other sections. To avoid introducing confusion into the CATI programming, however, the remaining sections have not been relettered.

NOTE: A section was considered complete if the amount of time to complete the section was greater than zero and the section completion flag was set. Section outliers were removed from the timing calculations (2 in section A, 1 in section B, 3 in section D, 1 in section F, and 2 in section G).

5. Interviewer hours

During the B&B:2000/01 field test, telephone interviewers worked a total of 1,374 hours to obtain completed interviews from 695 sample members who completed full or partial interviews and 79 individuals who completed reliability reinterviews in CATI. Excluding the time each interviewer spent in training or attending quality circle meetings, and the additional time that team leaders and other senior telephone interviewers allotted to supervision and monitoring, this represented an average of 2.0 hours per completed interview. Since the average time to administer the interview was just over 18 minutes, most interviewer time clearly was spent in other activities, primarily in locating and contacting. In addition to the telephone interviewers, supervisors and monitors worked 488 hours during the field test, or approximately 1 hour for every 3 hours of telephone interviewing. Another 202 hours were attributed to refusal-conversion training, quality circle meetings, and debriefing meetings.

The level of effort required to complete interviews varied considerably across shifts and days of the week. As shown in table 3.13, the lowest “hours per complete interview” average was obtained on Mondays, particularly during the evening shift (average of 1.5 hours per complete). The highest hours per complete were incurred on Thursdays during the day shift (average of 2.7 hours per complete). The relatively small size of the interviewing staff on a particular shift (ranging from two to five interviewers per shift) makes it difficult to determine whether these variations are due to the availability (or lack thereof) of sample members during those periods or to variations in interviewer efforts on those shifts.

Table 3.13—B&B:2000/01 field test average hours per complete, by day of the week and time of day

Time of shifts	Day of the week							
	Overall average	Monday	Tuesday	Wednesday	Thursday	Friday	Saturday ¹	Sunday ²
Total	2.0	1.5	1.9	2.0	2.1	2.2	2.2	2.2
8:30 a.m. -4:59 p.m.	2.1	1.7	1.9	2.5	2.7	1.9	(†)	(†)
5:00 p.m. -11:59 p.m.	1.9	1.5	1.9	1.8	2.0	2.3	(†)	(†)

†No data available for this time slot given the different schedule on weekends.

¹ Interviewing hours for Saturday were 9:00 am–5:00 p.m.

² Interviewing hours for Sunday were 1:30 p.m.–9:30 p.m.

SOURCE: U.S. Department of Education, National Center for Education Statistics, Baccalaureate and Beyond Longitudinal Study:2000/01 field test.

6. Number of Calls

Telephone interviewers made 15,347 telephone calls during the field test, with an average of 17.9 calls per sample member.⁶ An average of 15.4 calls was required to obtain the 695 completed cases. Slightly more than half of the completed telephone interviews (52.5 percent) were completed with fewer than 10 calls, 32.0 percent required 10 to 29 calls, and 15.5 percent of the completed cases required 30 or more call attempts.

Of the 15,347 calls made, 1 in 5 resulted in contact with an individual. Nearly half of the contacts (47.1 percent or 7,234 calls) resulted in contact with an answering machine, reflecting the heavy usage of such devices among this population. An answering machine was reached at least once (and often multiple times) for three of every four B&B sample members. The remaining one-third (33.7 percent) of the calls made were other noncontacts (busy, ring/no-answer, fax line, pager, etc.).

7. Answering machines, messages, and call-ins

Answering machines are an increasing problem for all studies conducted by telephone. Whether the machines are used to screen unwanted calls or used to facilitate “on the go” lifestyles, answering machines pose an obstacle to contacting sample members and completing interviews. On average, the higher the percentage of calls resulting in an answering machine disposition, the greater the average number of call attempts required to complete the interview. Where no machine was encountered, an average of 6.0 calls was required to obtain a completed interview. If fewer than 50 percent of the call attempts reached an answering machine, it took an average of 14.5 call attempts to complete the interview. Finally, among cases where an answering machine was reached on 50 percent or more of the call attempts, it took on average 24.9 call attempts to complete an interview.

Answering machines are not, however, insurmountable barriers. Table 3.14 provides the contact and interview rates for hard-to-reach cases. As the table shows, ultimately we were able to contact over 90 percent of those hard-to-reach sample members where an answering machine was encountered on one or more call attempts. This high success rate holds even for cases where a machine was encountered on 50 percent or more of the call attempts. Likewise, completed interviews were obtained from 85 percent of these hard-to-reach cases, despite the interviewer reaching an answering machine on one or more attempts.

⁶ These figures are based on calls made by telephone interviewers and exclude calls made by TOPS in the course of attempting to locate sample members.

Table 3.14—B&B:2000/01 field test contact and interview rates for hard-to-reach respondents, by percentage of calls where an answering machine was reached

Percent of calls resulting in answering machine	Total respondents*	Contacted		Interviewed, given contact	
		Number	Percent	Number	Percent
Total	434	387	89.2	330	85.3
0%	39	27	69.2	24	88.9
Less than 50%	214	194	90.7	165	85.1
50% or more	181	166	91.7	141	84.9

*Calculations include only cases with 10 or more call attempts (i.e., those considered to be hard to reach).

SOURCE: U.S. Department of Education, National Center for Education Statistics, Baccalaureate and Beyond Longitudinal Study:2000/01 field test.

Answering machines can also serve as a vehicle for making contact with a sample member. Messages left on answering machines are the functional equivalent of “electronic lead letters,” notifying sample members of an impending call from an interviewer. During the B&B field test, the following message was left the first and fourth time an answering machine was encountered at a particular telephone number:

“I am calling for the U.S. Department of Education about a research study in which (sample member name) has been selected to participate. Please ask (him/her) to call “(name)” at 1-800-555-5555, and refer to ID number “(unique ID)” to complete the study. Thank you.”

The message (1) notified the sample members that they had been selected for a research study and (implicitly) that they would be recontacted in the near future, and (2) encouraged them to call in to complete the interview. As shown in table 3.15, a sizable portion of the field test sample did call in to complete the interview. In total, 165 callers used the toll-free number established for the study. Among these, 86.1 percent (142 cases) completed the interview upon calling in. Among those who did not complete the interview when they called in, the calls were a relatively even mix of refusals by the sample member, contact persons calling to provide new locating information for the sample member, or contacted individuals calling to say they did not know the sample member or did not know where to contact him or her.

Table 3.15—B&B:2000/01 field test interview results, by call-ins to toll-free study number

Message left on answering machine	Total number of call-ins	Respondents interviewed	
		Number	Percent
Total	165	142	86.1
No message	18	14	77.8
Message left	147	128	87.1

SOURCE: U.S. Department of Education, National Center for Education Statistics, Baccalaureate and Beyond Longitudinal Study:2000/01 field test.

Note: Because respondents were not asked directly what encouraged them to call in, it is not possible to examine directly the impact on call-ins of leaving messages versus obtaining the toll-free number from some other source, such as a third-party contact, initial student lead letter, or follow-up incentive mailing. The results presented here, therefore, simply provide a breakout of call-ins by respondents who received a message on their answering machine and those who did not, because no answering machine was encountered on any attempt to reach the respondent.

B. B&B:2000/01 field test incentive experiment

1. Overview of the incentive experiment

As explained in section 2.H.1, the incentive experiment implemented during the B&B:2000/01 field test was designed to examine the likelihood that sample members in the follow-up study who received an incentive payment in the base-year study would respond to a request for a follow-up study. In particular, the questions of interest involved (1) whether or not sample members who received a modest incentive (\$20) for their participation in the NPSAS:2000 field test study would participate in the follow-up without an incentive, and (2) if such respondents received an incentive at the beginning of the follow-up study, whether they would respond more quickly than those not receiving an incentive, thereby lowering the level of effort for such cases.

NPSAS:2000 sample members who received an incentive in the base-year study were randomly assigned to one of two groups for the B&B field test: an incentive group and a control group. Incentive group members received a \$20 incentive the first week of data collection to complete the interview; control group members received no incentive. All other survey activities, such as contacting/interviewing, tracing/locating efforts, and the like, were similar for the two groups. Sample members selected to receive an incentive were sent a personalized letter delivered by express overnight service. Enclosed with the letter was a \$5 bill and instructions for completing the interview by calling a toll-free telephone number. After successfully completing the B&B:2000/01 interview, whether by call-in to the toll-free number from the sample member or through a subsequent call from a telephone interviewer, each respondent in the treatment group received an additional payment of \$15 by personalized check.

2. Results of the incentive experiment

Of the 179 cases in the field test who were eligible for the experiment, 90 cases were selected to receive an incentive, and 89 cases were assigned to a control group. As shown on table 3.16, 60 percent (54 of the 90 cases) of the sample members who received an incentive

completed the interview during the time frame in which the experiment was conducted. Among the control group, completed interviews were obtained by half of the sample members (45 of 89 cases). The difference between those who received an incentive and those who did not is not statistically significant.

In terms of level of effort (see table 3.17), it took fewer call attempts to obtain completed interviews with sample members who received the incentive mailing at the outset of the study compared to those in the control group (9.6 versus 12.2 call attempts). These results, however, are not statistically significant either.

Finally, the experiment was also designed to allow interviewers to note whether or not sample members—particularly those in the control group—inquired about the incentive at the outset of the study. Among respondents who did not receive an incentive mailing, only six asked about the possibility of receiving an incentive for their participation in the B&B:2000/01 follow-up: two refused to participate and four continued to participate upon learning that they would not be eligible for the incentive.

Table 3.16—B&B:2000/01 field test interview outcome, by incentive experiment group

Incentive experiment group	Total number in group	Interview outcome	
		Number complete	Percent complete
No incentive	89	45	50.6
Received incentive	90	54	60.0

NOTE: Significance: $p < .05$ using a Chi-square test of significance. This analysis showed no significant difference between incentive groups.

SOURCE: U.S. Department of Education, National Center for Education Statistics, Baccalaureate and Beyond Longitudinal Study:2000/01 field test.

Table 3.17—B&B:2000/01 field test mean call attempts for completed interviews, by incentive experiment group

Incentive experiment group	Interview outcome	
	Number complete	Mean call attempts per complete
No incentive	45	12.2
Received incentive	54	9.6

NOTE: Significance: $p < .05$ using an F-test of means. This analysis showed no significant difference between incentive groups.

Chapter 4

Evaluation of Data Quality

A. Reliability of interview responses

The temporal stability of a subset of interview items was evaluated through reinterview. Reinterviews were administered to a randomly selected subsample of 79 respondents who completed the full interview within the first 6 weeks of data collection and agreed to participate in the reinterview. The reinterview included items that were newly designed for the B&B:2000/01, or revised since being used in either B&B:93/94 or NPSAS:2000. The items assessed facts rather than attitudes, because valid and reliable responses needed to remain stable for the time between initial interview and reinterview. A paper facsimile of the reinterview is provided in appendix D.

Reinterview respondents were contacted 5 to 7 weeks after they completed the initial interview, and their responses in the initial interview and the reinterview were compared. Two measures of temporal stability were computed for all paired responses. The first, *percent agreement*, was determined in one of two ways. For categorical variables, the interview/reinterview responses *agreed* when there was an exact match between the two responses. For continuous variables, the two responses were considered to match when their values fell *within one standard deviation unit of each other*.¹

The second measure evaluated temporal stability using one of three relational statistics: Cramer's V, Kendall's tau-*b* (τ_b), and the Pearson product-moment correlation coefficient (r). Which of the three statistics was used depended on the properties of the particular variable. That is, Cramer's V statistic was used for items with discrete, unordered response categories (e.g., yes/no responses). Kendall's tau-*b* (τ_b) statistic, which takes into account tied rankings,² was used for questions answered using ordered categories (e.g., never, sometimes, often). For items yielding interval or ratio scale responses (e.g., income), the Pearson product-moment correlation coefficient (r) was used.

¹This is equivalent to within one-half standard deviation of the average (best estimate of actual value) of the two responses.

²See M. Kendall, "The Treatment of Ties in Rank Problems, *Biometrika* 33 (1945): 81-93; and A. Agresti, *Analysis of Ordinal Categorical Data* (New York, NY: Wiley & Sons, 1984).

Analyses were based on the 79 respondents who completed reinterviews. Effective sample sizes are presented for all results because analyses needed to be restricted to cases with determinate responses to the relevant items in both interviews.

Because not all items were applicable to all respondents (e.g., some questions were asked only of graduate students or those currently employed), variation exists in the number of cases on which the reliability indices were based for the items considered. For administering the reinterview, information from the initial interview was preloaded to ensure that school-specific and job-specific items were asked for the same school and job across the two interviews.

1. First-year enrollment experiences

Table 4.1 presents the results of reliability analyses for the set of items pertaining to first-year enrollment experiences. Percent agreement ranges from 75.9 to 91.1 percent and the relational statistic ranges from 0.71 to 0.88. The item with the lowest reliability is the number of jobs held while enrolled during the respondent's first year of postsecondary education, with 75.9 percent agreement and a relational statistic of 0.71. This is not surprising given that the time referent for these questions is approximately 4 to 5 years in the past. Given the amount of time that had passed since the activities in question, the temporal stability of the two remaining items is quite good.

Table 4.1—Reliability indices for first-year enrollment experiences

Data element	Number of cases ¹	Percent agreement ²	Relational statistic ³
First-year residence	79	91.1 ⁴	0.88 ⁵
Number of jobs held while enrolled during first year	79	75.9	0.71
Number of hours worked/week while enrolled during first year	44	86.4	0.84

¹ Analyses were conducted only for respondents with determinate responses on both the initial interview and the reinterview; not all questions were applicable to all respondents.

² Unless otherwise indicated, this percentage reflects an exact match of the paired responses.

³ Unless otherwise indicated, the relational statistic used here is Kendall's tau-b (τ_b).

⁴ This percentage reflects values that fall within one standard deviation unit of each other.

⁵ The relational statistic used here is Pearson's product moment correlation coefficient, r .

NOTE: Analyses are based on 79 respondents to the reliability reinterview.

2. Employment in 1999

Table 4.2 presents the results of reliability analyses for the set of items pertaining to work and income for calendar year 1999. The measures of temporal stability for income earned from work in 1999 are exceptionally high, with 96.9 percent agreement and a relational statistic of 0.93. Percent agreement is also good for the item representing whether the respondent worked for pay in 1999, but the relational statistic is lower at 0.49. This is likely because 92 percent of all respondents reported working both during the main interview and during the reinterview.

Another factor contributing to the unusually high reliability of these employment and income items is the period referenced. These questions asked about employment in the calendar year in which most B&B respondents, by definition, graduated from college. Most respondents had recently started working in their first "real" job and likely remembered their income for that period.

Table 4.2— Reliability indices for employment in 1999

Data element	Number of cases ¹	Percent agreement	Relational statistic
Worked for pay in 1999	79	94.9 ²	0.49 ³
Income from work in 1999	65	96.9 ⁴	0.93 ⁵

¹Analyses were conducted only for respondents with determinate responses on both the initial interview and the reinterview; not all questions were applicable to all respondents.

²This percentage reflects an exact match of the paired responses.

³The relational statistic used here is the Cramer's V statistic.

⁴This percentage reflects values that fall within one standard deviation unit of each other.

⁵The relational statistic used here is the Pearson product moment correlation coefficient, *r*.

NOTE: Analyses are based on 79 respondents to the reliability reinterview.

3. Graduate enrollment

Table 4.3 presents reliability results for items related to current and anticipated graduate enrollment. Overall temporal stability for this series of items is quite good. Percent agreement for this series of items ranges from 81.0 to 97.5, and the relational statistic ranges from 0.51 to 0.90. The most reliable item, which asked about current enrollment in a graduate program, had 97.5 percent agreement and a relational statistic of 0.90.

Current enrollment in an undergraduate program, a vocational program, or a nondegree program also has very high percent agreement (95.5 percent) but a low relational statistic (0.55). The overwhelming majority of respondents (92 percent) reported no enrollment in these types of programs in both the main interview and the reinterview. However, of those who said that they were enrolled in a nongraduate program during the main interview, 50 percent reported no enrollment by the time of the reinterview. The main interviews were conducted from March through July, and the reinterviews were conducted during the months of May and June. It is possible that the observed response reversal was due to real change; respondents could have been enrolled in a term that ended before the reinterview took place.

The least reliable item in this series asks whether respondents claimed the Lifetime Learning Tax Credit when they filed their 1999 taxes. For this item, percent agreement is relatively high at 81.0 percent, but the relational statistic is only 0.51. The Lifetime Learning Tax Credit is still relatively new, and many respondents did not know what it was. The response options for this question included two different values for no: "0" = "Never heard of it (the tax credit)," and "2" = "No." Evaluation of the reinterview data shows that all of the respondents who initially reported not having heard of the tax credit, simply reported not having taken the tax credit when reinterviewed. This is more a function of the structure of the reinterview than the actual response stability of the question. Of those who initially reported having taken the tax credit, 25 percent reported not having taken the credit during the reinterview. Of those who initially reported not taking the credit, all responded consistently during the reinterview.

Respondents' plans to enroll in graduate school in the future have high percent agreement (84.6 percent) and a marginally acceptable relational statistic (0.68). Of the respondents who originally reported that they plan to enroll in a graduate program in the next 10 years, 17 percent changed responses by the time of the reinterview. Only 10 percent of those

who initially reported that they did not plan to enroll reversed responses between interview and reinterview.

Table 4.3— Reliability indices for graduate enrollment

Data element	Number of cases ¹	Percent agreement ²	Relational statistic ³
Applied to graduate school for the 2000/01 school year	65	95.4	0.89
Plans to enroll in graduate school in the next 10 years	39	84.6	0.68
Currently enrolled in a graduate program	79	97.5	0.90
Currently enrolled in undergraduate or vocational program	66	95.5	0.55
Claimed Lifetime Learning Tax Credit	63	81.0	0.51 ⁴

¹ Analyses were conducted only for respondents with determinate responses on both the initial interview and the reinterview; not all questions were applicable to all respondents.

² Unless otherwise indicated, this percentage reflects an exact match of the paired responses.

³ Unless otherwise indicated, the relational statistic used here is the Cramer's V.

⁴ The relational statistic used here is Kendall's tau-b (τ_b).

NOTE: Analyses are based on 79 respondents to the reliability reinterview.

4. Current employment

Measures of temporal stability for items about current employment are presented in table 4.4. Overall temporal stability for these items is mixed. Percent agreement ranges from 69.8 to 100.0 and the relational statistic ranges from 0.58 to 1.00. The indicator of whether or not respondents are currently teaching shows perfect reliability.

Reliability measures for the items representing the number of employees working for the respondents' company and whether the respondents' current job is related to their undergraduate major are very good. Percent agreement is 86.8 and 89.2, and the relational statistic is also very high for both (0.89 and 0.87, respectively.)

The least reliable question in this series was that pertaining to flexible job schedules. Percent agreement is only 69.8 and the relational statistic is 0.58. Evaluation of the interview and reinterview data shows that there was quite a bit of response instability. Of those who initially reported having inflexible job schedules, 28 percent reported having a "somewhat flexible" schedule by the time of the reinterview. Of those who originally had "somewhat flexible" job schedules, 25 percent changed responses by the reinterview and reported "very flexible" job schedules. Among those who indicated having "very flexible" job schedules during the main interview, 17 percent reported having "somewhat flexible" schedules at the time of the reinterview. It is possible that working conditions at the time of the interview influenced responses to this question. For example, a "very flexible" schedule might not seem so flexible when things are really busy.

The item that asked respondents if they would consider their current job to be a career job has only moderately acceptable reliability. Percent agreement is 76.5 and the relational statistic is 0.58. Most respondents (65 percent) reported that their current job was a career job during both the main interview and the reinterview.

Of those who did not indicate that the current job was a career job, the distribution of interview and reinterview responses was spread among the remaining responses without much of a pattern. There were several problems with the administration of this question in the field test. First, the question was read as if it were a “yes/no” question, and if the response was “no,” then interviewers were instructed to probe and code the answer. However, respondents had difficulty understanding the intent of the question, so they did not know how to respond to the probe. Second, the remaining response options (other than “yes”) were not mutually exclusive. It could have been that respondents were working in their current job to “pay the bills” and to “prepare for graduate school,” which substantially reduces response consistency over time. For the full-scale survey, this item will be revised so that (1) the intent of the question is more clear, and (2) the response options will be mutually exclusive.

Table 4.4— Reliability indices for current employment

Data element	Number of cases¹	Percent agreement²	Relational statistic³
Is current job a career job	51	76.5	0.58
Number of employees working for company	37	89.2	0.89
Flexible job schedule	53	69.8	0.58
Job related to undergraduate major	53	86.8	0.87
Currently teaching	69	100.0	1.00

¹ Analyses were conducted only for respondents with determinate responses on both the initial interview and the reinterview; not all questions were applicable to all respondents.

² Unless otherwise indicated, this percentage reflects an exact match of the paired responses.

³ Unless otherwise indicated, the relational statistic used is Kendall’s tau-b (τ_b).

NOTE: Analyses are based on 79 respondents to the reliability reinterview.

B. Indeterminate responses

1. Comparison of CATI respondents with nonrespondents

Using institutional record data obtained during the base year study (NPSAS:2000), we were able to compare the distribution between B&B follow-up CATI respondents and nonrespondents for selected items. Table 4-5 shows a comparison of the B&B:2000/01 field test CATI respondents and nonrespondents for seven variables.

Age is the only variable with a significant difference between the distribution of the respondents and nonrespondents, suggesting the possibility of nonresponse bias associated with the variable. For some categories within all of the primary variables except race/ethnicity, there are significant differences between CATI respondents and nonrespondents, also suggesting the possibility of nonresponse bias. For example, a higher percentage of nonrespondents are male than are respondents, and a lower percentage of nonrespondents are federal aid recipients than are respondents. An extensive nonresponse bias analysis is planned for the full-scale survey; however, since the field test data were not used to make population inferences, more extensive nonresponse bias analyses were deemed unnecessary.

Table 4-5.—Comparison of B&B:2000/01 CATI respondents and nonrespondents

	CATI respondents		CATI nonrespondents	
	Sample size	Percent estimate	Sample size	Percent estimate
Age				
19 or younger	0	0	0	0
20 to 23	329	47.34	46	30.46*
24 to 29	207	29.78	62	41.06*
30 to 39	77	11.08	23	15.23
40 or older	52	7.48	17	11.26
Missing	30	4.32	3	1.99
Race/Ethnicity				
White	500	71.94	97	64.24
Black Or African American	35	5.04	7	4.64
Asian	57	8.20	15	9.93
Hispanic	20	2.88	9	5.96
Other	83	11.94	23	15.23
Gender				
Male	245	35.25	70	46.36*
Female	416	59.86	77	50.99
Missing	34	4.89	4	2.65
Receipt of any aid				
Yes	492	70.79	92	60.93*
No	191	27.48	56	37.09
Missing	12	1.73	3	1.99
Receipt of federal aid				
Yes	387	55.68	72	47.68
No	107	15.40	20	13.25
Missing	201	28.92	59	39.07*
Receipt of state aid				
Yes	140	20.14	32	21.19
No	354	50.94	60	39.74*
Missing	201	28.92	59	39.07*
Receipt of institutional aid				
Yes	261	37.55	43	28.48
No	233	33.53	49	32.45
Missing	201	28.92	59	39.07*

*Nonrespondents were significantly different from respondents.

NOTES:

1. There were 695 respondents and 151 nonrespondents.
2. Since these data are from a field test, they are not weighted.
3. Tests for significant differences between the distributions of the respondents and nonrespondents were performed for each of the seven primary variables at the (0.05 / 6) level to account for multiple comparison effects. Age was the only variable found to be significant.
4. Within each variable, the category percentages of respondents and nonrespondents were tested for significant differences at the (0.05 / (c-1)) level, where c is the number of categories. Estimates that were found to be significantly different are flagged with an asterisk.

2. Indeterminacies among CATI respondents

Special keyed entry (of F3 or F4) by the interviewers allowed the CATI interview to accommodate responses of “don’t know” and refusal to every item. Refusal (RE) responses to interview questions were most common for items considered sensitive by respondents, while “don’t know” (DK) responses may have resulted from a number of potential circumstances. The most obvious reason a respondent will offer a DK response is that the answer is truly unknown or in some way inappropriate for the respondent. DK responses may also be evoked when (1) question wording is not understood by the respondent (with no explanation by the interviewer), (2) the respondent hesitates to provide a “best guess” response (with insufficient prompting from the interviewer), and (3) a respondent implicitly refuses to answer a question. RE and DK responses introduce indeterminacies in the data set and must be resolved by imputation or subsequently dealt with during analysis. They need to be reduced to the greatest extent possible.

Overall item nonresponse rates were low, with only seven items containing over 10 percent missing data. These items are shown in table 4.6, and are grouped by interview section. Item nonresponse rates are calculated based on the number of sample members for whom the item was applicable and asked. Items with the highest rates of nonresponse were those pertaining to income. Many respondents were reluctant to provide information about personal and family finances and, among those who are not reluctant, many simply did not know. In addition, the items pertaining to the Lifetime Learning Tax Credit also garnered a high number of DK responses. These DK responses are most likely attributable to respondents’ unfamiliarity with the tax credit because of its relatively recent implementation.

Table 4.6—Student interview item nonresponse for items with more than 10 percent “don’t know” or “refused”

CATI section and variable name	Label	Number asked	Percent don’t know	Percent refused	Combined percent
Student background					
D_INCS99	Spouse work income 1999	196	10.7%	7.7%	18.4%
D_CRDBAL	Balance due on all credit cards	278	9.4%	5.4%	14.8%
D_MTGAMT	Monthly mortgage payment	164	6.1%	6.1%	12.2%
Post-baccalaureate education					
E_BEGGRD	When do you plan to enroll in a graduate program	256	32.0%	0.0%	32.0%
E_CREDIT	Will claim Lifetime Learning Tax Credit in 2000	564	16.3%	0.4%	16.7%
E_LIFLNG	Claimed Lifetime Learning Tax Credit	665	10.4%	0.2%	10.5%
Post-baccalaureate employment					
F_CURINC	Current job annual salary	478	5.2%	5.2%	10.5%

NOTE: Statistics are based on student sample members for whom specific items were applicable and asked. Items applicable to fewer than 50 sample members were excluded from consideration.

C. Help text

Online help text was available for every screen in the CATI instrument. Having additional information available at the touch of a key (F10) was very beneficial to interviewers, particularly at the beginning of data collection, to immediately alleviate any confusion with questions while they were still on the telephone with the respondent. Help text screens displayed information designating to whom the item applied, type of information that was requested in the item, and definitions of words or phrases in the item.

Counters were used to determine the number of times each help screen was accessed, making it possible to identify items that were confusing to interviewers or respondents. Table 4.7 presents CATI items having the highest rates of help text usage, along with their rates of indeterminacy. An analysis of the number of help text accesses revealed seven items for which the help text was accessed more than 10 times. The items pertaining to the Lifetime Learning Tax Credit collected the most accesses to help text (88 out of 664 times the item was administered), almost certainly because of student unfamiliarity with the tax credit. The help text included a thorough explanation of the Lifetime Learning Tax Credit that telephone interviewers were able to read to respondents unfamiliar with the credit.

Table 4.7—Item-level rates of help text access

CATI variable name	Label	No. of times help text was accessed	Rate of help text usage ¹	Rate of indeterminacy ²
B_ACAD	Withdrew from course due to failure	23	3.5	0.1
B_REM1	Remedial course required during first year	19	2.8	0.5
D_INC99	Income from work for 1999	12	1.8	9.3
E_CREDIT	Will claim Lifetime Learning Tax Credit in 2000	26	4.6	16.7
E_LIFLNG	Claimed Lifetime Learning Tax Credit	88	13.2	10.5
F_OTHEBE1	Employer provides other benefits	26	12.0	0.5
G_INTRN	Participated in teacher internship	28	21.4	0.8

¹The rate presented is the number of times the help text for each item was accessed, divided by the number of times that particular item was administered.

²The rate of indeterminacy is the number of "don't know" and "refused" responses divided by the number of times the item was administered.

A number of questions containing confusing terms or phrases were identified by their high counts of help text access. These items included questions about teacher internships, remedial courses, and employer benefits. The available help text with term definitions was vital in helping telephone interviewers explain any unknown terms to respondents. As a result, respondents were able to better understand and answer the survey items.

D. Online coding

The B&B:2000/01 field test instrument included tools that allowed computer-assisted online assignment of codes to literal responses for postsecondary education institutions attended,

major field of study, occupation, and industry. Online coding systems are designed to improve data quality by capitalizing on the availability of the respondent at the time the coding is performed. To assist with the online coding process, interviewers are trained to use effective probing techniques to ensure each response is appropriately coded. Interviewers can request clarification or additional information if a particular text string cannot be successfully coded on the first attempt, an advantage not afforded when coding occurs after the interview is complete. Because both the literal string and selected code are captured in the data file for field of study and occupation/industry responses, subsequent quality control recoding by project staff can be easily incorporated into data collection procedures.

Institutional coding was used to assign a six-digit IPEDS identifier for each postsecondary institution the respondent reported attending, other than those collected during their earlier interviews. To facilitate coding, the IPEDS coding system asked for the state in which the school was located, followed by the city, and finally the name of the postsecondary institution. The system relied on a look-up table, or coding dictionary, of institutions which was constructed from the 1997–98 IPEDS IC file. Additional information in the dictionary, such as institutional level and control, was retrieved for later use (e.g., branching) once the institution was properly coded.

Major field of study, occupation, and industry coding used a dictionary of word/code associations. The online procedures for these coding operations consisted of four steps: (1) the interviewer keyed the verbatim text provided by the respondent; (2) the dictionary system displayed words that were associated with the words in the text string and the interviewer was given the choice of either accepting a word that might help in terms of coding, or ignoring a word that was of no help; (3) standard descriptors associated with identified codes were displayed for the interviewer; and (4) the interviewer selected a standard descriptor that was listed.

Ten percent of the major, occupation, and industry coding results were sampled and examined. The verbatim strings were evaluated for completeness and for the appropriateness of the assigned codes. None of the verbatim strings in the sample was too vague to properly evaluate. Four of the occupation and industry strings, and only one string for the major field of study, required recoding. Furthermore, none of the recoded cases resulted in a shift across broad categories. Table 4.8 shows the results of the online coding procedures.

Table 4.8—Success rates for online coding procedures

Coding procedure	Coding attempts sampled	Number too vague	Percent too vague	Number recoded	Percent recoded
Major field of study	22	0	0.0	1	4.5
Occupation	36	0	0.0	3	8.3
Industry	40	0	0.0	1	2.5

E. CATI quality circle meetings

As mentioned in section 2.H, Quality circle meetings were vital components of the field test operation and evaluation. During these regularly scheduled meetings, interviewers, supervisors, and project technical staff met to discuss issues pertinent to locating respondents and conducting CATI interviews in the most effective manner. These meetings proved to be a good tool for communication, as they provided a forum to discuss many elements of the CATI instrument. Telephone interviewers attended the quality circle meetings on a rotating basis to ensure representation of various experiences, opinions, and challenges faced. Summaries of discussions and decisions were distributed to all telephone interviewers and supervisors in a newsletter. An electronic copy of this newsletter was sent to project staff not in attendance so those who did not attend the meeting could also benefit.

The quality circle meetings were instrumental in providing prompt and precise solutions to problems encountered by interviewers. Several modifications were made to the CATI instrument as a result of these meetings, including wording changes to clarify items for respondents. Quality circle meetings not only helped interviewers be more effective in interviews, but also gave project staff feedback that was influential in making the survey extremely clear for respondents and interviewers alike. The feedback and resulting changes ensure that any CATI issues that were problematic in the field-test instrument will be modified and improved in the full-scale study.

Some of the issues covered in quality circle meetings included:

- *Changes to the instrument:* Minor modifications to the instrument which were made after interviewer training were explained and demonstrated to be sure interviewers were aware of these changes and could work with them effectively.
- *Instrument logic:* Concerns about the instrument path logic were raised, resulting in modifications to the instrument based on telephone interviewer input. For example, interviewers found that students who were enrolled in school and working part-time often received questions relating to job benefits. Because students who work part-time do not often receive benefits, a change was made in CATI to route these respondents around the benefit items.
- *Item wording:* Misinterpretation of questions was addressed consistently. For example, respondents often misinterpreted “Other than [BA school], have you attended any other colleges or postsecondary schools since you graduated from high school?” because they did not include graduate and/or professional schools when answering this item. The item was changed to read “Other than [BA school], have you attended any other colleges or postsecondary schools, **including graduate and professional schools**, since you graduated from high school?” to eliminate confusion and to collect the necessary information.
- *Help screens:* Interviewers were reminded of the help text feature, which was available for every CATI item through the F10 function key. The help text screens provided additional explanation to allow interviewers to verify the intent of questions, as well as definitions of terms with which the interviewer or respondent were not familiar.

Interviewers were also able to use the F1 function key for quick access to student information, a calculator, roster lines, and case-level comments.

- *Problem sheets:* Problem sheet issues and types of details to include were also discussed.

F. Quality assurance CATI monitoring

Monitoring of telephone data collection leads to better interviewing and better-quality survey data as well as to improvements in costs and efficiency in telephone facilities.

Monitoring in the B&B:2000/01 field test helped to meet four important quality objectives:

(1) reduction in the number of interviewer errors; (2) improvement in interviewer performance by reinforcing good interviewer behavior; (3) assessment of the quality of the data being collected; and (4) evaluation of the overall survey design for full-scale implementation.

Monitors listened to up to 20 questions as the interviews were in progress and, for each question, evaluated two aspects of the interviewer-respondent interchange: whether the interviewer (1) delivered the question correctly and (2) keyed the appropriate response. Each of these measures was quantified, and daily, weekly, and cumulative reports were produced for the study's IMS. During the data collection period, 1,079³ items were monitored. The majority of the monitoring was conducted during the first half of data collection. Toward the end of data collection, monitoring efforts were scaled back due to the lighter caseload being worked by telephone interviewers, the greater experience of the remaining interviewers, and the satisfaction by project staff that the process was in appropriate control. Figure 4.1 shows error rates for question delivery; figure 4.2 shows error rates for data entry. Both presentations provide upper and lower control limits for these measures.⁴

Throughout the monitoring period, error rates remained within acceptable limits, typically below 1 percent. Among the 1,079 items observed, there were two CATI question delivery errors and nine data entry errors.

³ Five outlier observations were excluded from this analysis.

⁴ The upper and lower control limits were defined by three times the standard error of the cumulative proportion of errors to the number of questions observed for the period (+3 * SE for the upper limit; -3 * SE for the lower limit).

Figure 4.1—Monitoring error rates for CATI question delivery

Figure 4.2—Monitoring error rates for CATI data entry

Chapter 5

Recommendations for the Full-Scale Study

The B&B:2000/01 field test was successful in providing useful information with respect to planning for the full-scale study. While many aspects of the survey design and instrumentation worked quite well, some field test outcomes and evaluation results, documented in chapters 3 and 4 of this report, justify procedural and substantive modifications to the full-scale survey implementation. Major recommendations are summarized below by topical area.

A. Sampling of baccalaureate recipients

1. Change in eligibility requirements

Eligibility requirements in the NPSAS:2000 field test for the B&B cohort accepted all sample members who were awarded a baccalaureate degree at any time during the NPSAS year. For the NPSAS:2000 full-scale study, eligibility requirements also stipulated that respondents be enrolled at some point during the NPSAS year. This requirement was added because many questions in the interview referred to enrollment during the NPSAS year. These questions were awkward and inappropriate for respondents who had not been enrolled during that period, but had received a degree. The B&B cohort for the full-scale follow-up will adhere to these eligibility requirements as well. Specifically, eligibility for the B&B:2000 cohort will require that the sample member be enrolled and receive a baccalaureate degree anytime between July 1, 1999, and June 30, 2000.

2. Sampling of base-year nonrespondents

In addition to sampling all of the NPSAS:2000 respondents verified to be B&B eligible, we will select half of the NPSAS B&B sample nonrespondents for the B&B:2000/01 sample. Based on results from the field test, this sample of base-year nonrespondents is expected to have a yield of 50 percent in the B&B follow-up survey. That is, half the members of this sample are expected to be verified as B&B eligible and to respond in the follow-up survey and half are expected to consist of ineligibles, false positives, nonrespondents in B&B, or several of these combined. Since the proportion of B&B false negatives (i.e., students not selected as potential B&B sample members but who were determined in CATI to be B&B eligible) was extremely small (1.5 percent), no attempt to represent these students in the full-scale survey is planned. The NPSAS B&B nonrespondents can be classified as

- students who were sampled as B&B and located but who refused to be interviewed in NPSAS;

- students who were sampled as B&B and located but time ran out before a NPSAS interview could be completed; or
- students who were sampled as B&B but not located for NPSAS.

Overall, 44.8 percent of B&B nonrespondents in the NPSAS field test were interviewed during the B&B follow-up field test with students in the second category above the most likely to complete a B&B interview (68.2 percent), followed by students in the third category (43.9 percent), and then by students in the first category (32.4 percent). For the full-scale follow-up, we will be able to sample from the three groups of base-year nonrespondents at rates proportional to the response rates achieved in the follow-up field test in order to achieve the expected yield.

B. Effect of false positives and false negatives

During the NPSAS:2000 field test, 79 of the 797 students sampled as B&B (9.9 percent) were found during the NPSAS interview not to be B&B eligible (false positives), and 12 of the 817 students sampled as other undergraduates, graduates, or first-professionals from 4-year institutions (1.5 percent) were found during the NPSAS interview to be B&B eligible (false negatives; see the *NPSAS:2000 Field Test Methodology Report* for more details). To account for the false positives and false negatives in NPSAS full-scale sample selection, more B&B students and fewer other undergraduate students than necessary will be selected. For the B&B:2000/01 field test, there were no false negatives because all sample students were either verified during NPSAS to be B&B eligible, or were sampled for B&B. However, 9 of the 125 NPSAS nonrespondents in the B&B sample (7.2 percent) were false positives. The full-scale B&B sampling plan will account for the expected false positives from the sample of NPSAS nonrespondents.

C. Use of targeted incentives to sample members

The use of monetary incentives was shown in an experiment conducted as part of the base-year (NPSAS:2000) study to be an effective means of reducing nonresponse among some types of nonrespondents, in particular those who initially refused to be interviewed (see *NPSAS:2000 Field Test Methodology Report*). The lingering question for the B&B:2000/01 1-year follow-up is whether those who received an incentive in the base year would demand an incentive before completing the follow-up survey. If a significant portion did insist on receiving an incentive before completing the survey, then it might be advisable to simply send an incentive at the outset of the full-scale data collection effort to those who received an incentive in the base year. However, if there was little apparent difference in the response rates of those who received an incentive at the start of the study versus those who did not receive an incentive in the follow-up experiment (i.e., those in the control group), then the recommendation would seem to favor using incentives in a more conservative, targeted manner.

The results of the incentive experiment described in Chapter 3 seem to argue for the latter approach—that is, using incentives in a targeted manner to reduce nonresponse, rather than mailing incentives to all of the sample members who received an incentive in the base year. Although the overall number of cases examined was relatively small, the evidence does not appear strong enough to warrant the expenditure of resources on incentives to all base-year incentive recipients at the outset of the study. Instead, it is recommended that the same incentive

protocols used in the base-year study (NPSAS:2000) be implemented for the full-scale B&B:2000/01 to reduce nonresponse among particular sets of sample members. These protocols include:

- Targeting for incentive receipt only (1) those who refuse to complete the study initially and (2) those for whom only a valid address is available (i.e., there is no valid telephone number). Incentives may also be targeted to a third group: those with high call counts (30 or more call attempts) for whom a valid mailing address is available.
- Incentive recipients will receive a letter, sent via express mail, which explains the study and expresses the need for their cooperation. These mailings should also include a five-dollar bill.
- Sample members will be instructed that if they complete the survey, they will be sent a check for an additional \$15.

We believe this protocol will effectively reduce the level of nonresponse for the B&B:2000/01 follow-up study, while also conserving resources—using them in a targeted manner.

D. Early e-mail contact with sample members

The field test experience also seemed to indicate that e-mail was an effective mode for establishing contact with some sample members. A high percentage of those contacted via e-mail either called in directly to complete the interview or set up a convenient time to complete the survey at a later date. In the field test, e-mail contact was used as a tool for reducing nonresponse. E-mails were sent relatively late in the course of data collection and were targeted only at those who had not completed the interview by the eighth week of the interviewing effort.

For the full-scale study, we recommend using e-mail earlier in the process—at the outset of data collection—as a means of making early contact with the sample members. A mailing should be sent to all respondents for whom a valid e-mail is obtained from either the base-year study or the student update sheets. The content of the e-mail should be similar to that of the initial prenotification letter, indicating the purpose of the study and requesting the sample member either to call a toll-free number to complete the survey or to notify us via e-mail or telephone of a more convenient time to complete the survey. E-mail should also be used periodically throughout data collection as a means of establishing contact with sample members who prove difficult to reach by telephone. The early use of e-mail as an alternative means of communication should help increase the initial contact rates with these otherwise hard-to-reach sample members.

E. Student CATI

We recommend a number of revisions to the field test student follow-up CATI interview for use in the full-scale B&B follow-up survey. These suggestions are based on (1) examination of field test interview results, including item indeterminacies; (2) results of timing analyses; (3) quality circle debriefings with telephone interview staff; and (4) discussions with the study Technical Review Panel (see appendix A for a list of panel members). These recommended changes are listed by instrument section and individual data element in table 5.1.

Table 5.1—Adjustments to field test CATI data elements for B&B:2000/01 full-scale CATI student interview

Data element	Action proposed	Recommendation
Enrollment history		
B_SCH1ST <i>Enrollment status at first postsecondary institution</i>	Revise	Change time reference to first year of enrollment.
B_REM1 <i>Required to take any remedial or developmental courses during first year of enrollment</i>	Revise	Change wording to make more clear to respondents. Many students do not know that the courses they are required to take are “remedial.” The new wording will read: During your first year, did you take any basic or remedial English or math courses for which credit did not apply toward your degree, or that were in addition to those required for your degree.
B_AP <i>Advanced placement credits accepted</i>	Revise	Change wording to include any college credits earned in high school.
B_RES1 <i>Residence during first year of enrollment</i>	Revise	It is not necessary to collect as much detail as we were previously getting. The response categories will be limited to: 1 = ON CAMPUS 2 = OFF CAMPUS WITH PARENTS OR GUARDIANS 3 = OFF CAMPUS – OTHER.
B_JOB1 <i>Number of jobs held during first year</i>	Delete	This question is unnecessary, as we collect number of hours worked. If there were “0” hours worked, there were no jobs.
B_GRANT <i>Grants and scholarships received during first year of enrollment</i>	Revise	Revise question wording to include employer reimbursement as a form of financial assistance received during first year of enrollment.
B_STPRS1 <i>Reason for taking a break from school</i>	Revise	Add response category 13: 1 = ACADEMIC PROBLEMS 2 = CLASSES NOT AVAILABLE/SCHEDULING NOT CONVENIENT 3 = NOT SATISFIED WITH PROGRAM/SCHOOL/CAMPUS/FACILITY 4 = DECIDING ON A DIFFERENT PROGRAM OF STUDY 5 = TAKING TIME OFF FROM STUDIES 6 = PARTICIPATED IN CO-OP/INTERNSHIP PROGRAM 7 = CONFLICTS WITH JOB/MILITARY 8 = NEEDED TO WORK 9 = OTHER FINANCIAL REASONS 10 = CHANGE IN FAMILY STATUS (E.G., MARRIAGE, BABY, DEATH IN FAMILY) 11 = CONFLICTS WITH DEMANDS AT HOME/PERSONAL PROBLEMS 12 = TO PURSUE OTHER INTERESTS (E.G., TRAVEL, HOBBIES, ETC.) <u>13 = UNSURE OF FUTURE PLANS</u> 14 = OTHER

Table 5.1—Adjustments to field test CATI data elements for B&B:2000/01 full-scale CATI student interview—Continued

Data element	Action proposed	Recommendation
B_2YR1 <i>Reason attending a 2-year school</i>	Revise	Add response categories 6-8: 1 = COULDN'T AFFORD TUITION ELSEWHERE 2 = CHEAPER TO EARN CREDITS 3 = DIDN'T HAVE GRADES FOR 4-YR SCHOOL 4 = INTENDED TO OBTAIN ASSOCIATE'S DEGREE 5 = CLOSER TO HOME 6 = RECEIVED FINANCIAL AID 7 = HAD DESIRED PROGRAM 8 = PERSONAL REASONS 9 = OTHER
B_FLUENT <i>Fluent in any language other than English</i>	Add	We will add an item asking if respondents are fluent in any language other than English.
B_ABROAD <i>Studied abroad since high school</i>	Add	A question will ask if respondents have studied abroad (outside of the United States and its territories) since finishing high school.
Student Background		
D_HSHLD1 <i>Household composition</i>	Revise	We will change the question wording so that it does not sound so intrusive. The next question asks about your living arrangements. Please tell me who currently lives in your household. I do not need to know their names, just the number of each type. Please include your children, parents, friends, and other relatives. Spouse/partner Children/stepchildren..... Parents, stepparents, guardians Brothers and sisters..... In-laws, grandparents, other relatives Nonrelatives (friends)
D_AGE1-3 <i>Ages of dependent children</i>	Revise	We will ask for the ages of dependent children rather than getting the number of children within specified age ranges. If there are more than six dependent children, we will collect the ages of the six youngest.
D_INC99 <i>Respondent's income for calendar year 1999</i>	Delete	Given that respondents, by definition, were enrolled in school in the past year, their income for 1999 will likely only span the months from graduation through the end of the year. Furthermore, we ask for the salary of the current job in the employment section.
D_REPAY, D_RPYAMT <i>Amounts owed for undergraduate loans, repayment status, repayment amount.</i>	Add	While we get most of the necessary information about respondents' undergraduate financial aid in the base-year survey, we need to ask the following: <ul style="list-style-type: none"> • Amount borrowed for undergraduate education • Amount currently owed • Is the respondent in repayment • Are parents are helping with repayment • Has any part of the loan been forgiven, or is employer assisting with repayment • What is the monthly amount of repayment • Amount borrowed from family and friends • Amount owed to family and friends
D_RNTAMT <i>Monthly rent amount</i>	Add	We currently only ask monthly mortgage amount for respondents who own homes. We will ask for monthly rental payments to get a better picture of respondents' major monthly expenses.

Table 5.1—Adjustments to field test CATI data elements for B&B:2000/01 full-scale CATI student interview —Continued

Data element	Action proposed	Recommendation
D_NUMCRD <i>Number of credit cards respondent has in own name</i>	Delete	This item is considered intrusive and not useful for analytic purposes. This item will be dropped.
D_CRDBAL <i>Total balance due on all credit cards</i>	Revise	We will reword this question so that it is clearer to respondents.: What was the total outstanding balance on all your cards according to the last statements?
Post-baccalaureate enrollment		
<i>Post-baccalaureate enrollment section</i>	Revise	This section will be organized to collect three distinct paths of post-baccalaureate enrollment: <ul style="list-style-type: none"> formal degree programs (master's, doctoral, professional, and post-baccalaureate programs), courses taken for credit in an accredited postsecondary institution outside of a formal degree program (includes courses taken in preparation for future graduate enrollment and career preparation), and noncredit courses taken anywhere (includes courses taken in preparation for certification/licensure).
E_GRDWHY <i>Why respondent decided to go to graduate school</i>	Add	We will ask respondents why they decided to pursue graduate school.
E_PBARS1-3 <i>Why respondent decided to enroll in post-baccalaureate education</i>	Revise	Add response category 7: 1 = PREPARE FOR GRADUATE SCHOOL 2 = PREPARE FOR LICENSING EXAM 3 = QUALIFY FOR A PROMOTION 4 = CHANGE CAREER/TRAIN FOR NEW JOB 5 = BECOME BETTER QUALIFIED FOR CURRENT JOB 6 = ACADEMIC INTEREST/PERSONAL ENRICHMENT <u>7 = MAINTAIN/PREPARE FOR LICENSURE</u> 8 = OTHER
E_PBAAPP through E_BAAIDS <i>Post-baccalaureate financial aid</i>	Delete	Field test results show very few responses to this series of items. We will delete all post-baccalaureate financial aid items with the exception of employer reimbursement.
E_GRDRS1-3 <i>Reason for choosing graduate school</i>	Revise	Add response option 6: 1 = REPUTATION 2 = FACULTY 3 = LOCATION 4 = FINANCIAL AID 5 = ALLOWS PART-TIME ATTENDANCE <u>6 = OFFERED DESIRED PROGRAM</u> 7 = OTHER
E_SPOUSE <i>Received money from spouse to cover graduate expenses</i>	Delete	This item will be deleted because it is not useful for analytic purposes.
E_GWAIVE <i>Received tuition waiver for graduate studies</i>	Revise	A follow-up question will ask if the tuition waiver was full or partial.

Table 5.1—Adjustments to field test CATI data elements for B&B:2000/01 full-scale CATI student interview—Continued

Data element	Action proposed	Recommendation
E_LNFRGV	Add	We will add a question about loan-forgiveness programs in which student loans are repaid on respondents' behalf in return for committing to working in a particular field for a certain amount of time.
E_GRDTUI through E_GRDTUV <i>Tuition for graduate school</i>	Delete	Respondents typically have difficulty remembering tuition amounts. We will be able to gather tuition information from the IPEDS database.
E_GRDATY through E_FSRS <i>Sources of funding for graduate education</i>	Delete	This series of items will be deleted because we have a better sample of graduate students from the base-year survey, and this question solicits more detail than is needed for the follow-up study.
E_DELAY <i>Reason for delaying entry into graduate school</i>	Revise	<p>We will add response options 12 and 13.</p> <p>1 = UNDERGRADUATE DEBT 2 = COULDN'T GET FINANCIAL AID 3 = OTHER FINANCIAL REASONS 4 = RAISING CHILDREN 5 = OTHER FAMILY RESPONSIBILITIES/CONSTRAINTS 6 = FAILED TO MEET APPLICATION DEADLINE 7 = NOT ADMITTED TO SCHOOL OF CHOICE 8 = WANT A BREAK FROM SCHOOL 9 = HAD GOOD JOB OPPORTUNITY 10 = CAREER PLANS INDEFINITE 11 = WANT/NEED WORK EXPERIENCE <u>12 = LOCATION CHANGE</u> <u>13 = MILITARY COMMITMENT</u> 14 = OTHER</p>
Post-baccalaureate employment		
F_EMPTYP <i>Employer type</i>	Revise	We will reword the response options so that the option for teaching assistants clearly refers to the institution in which the respondent is enrolled.
F_APRSAM	Add	We will add a question to determine if the current job is the same as the job held in April.
F_CURJOB <i>Current job as beginning of career</i>	Revise	<p>We will revise question wording and response options to:</p> <p>Which of the following best describes your current job?</p> <p>1 = The start of your career in your current occupation 2 = Continuing in the career you had before graduation 3 = Preparing for graduate school 4 = Preparing for another job 5 = Temporary job—deciding on future education/career 6 = Pays the bills/only job available 7 = Other</p>
F_COSIZE <i>Number of employees in current company</i>	Revise	We will collect this response as continuous rather than in categories. If respondent does not know, we will probe to find out if less than 50 or over 1000.

Table 5.1—Adjustments to field test CATI data elements for B&B:2000/01 full-scale CATI student interview—Continued

Data element	Action proposed	Recommendation
F_BENFIT <i>Employer provided benefits</i>	Revise	Respondents will be asked a yes/no question for each of the following: 1 = Health insurance 2 = Retirement benefits 3 = Education assistance/tuition reimbursement 4 = Legal services 5 = Flexible spending accounts 6 = Dental/optical insurance 7 = Prescription plans 8 = Child care facility or subsidy 9 = Fitness facility or subsidy
F_FLXNEW <i>Searching for a more flexible job schedule</i>	Delete	Rather than asking for this in the context of flexible scheduling, we will ask all respondents who are currently employed if they are actively searching for another job. The new item will come after the questions about job satisfaction.
F_TELCOM <i>Able to work away from office</i>	Revise	The revised question text will clarify that we are asking about whether or not the employer allows respondents to work regularly away from the office or telecommute. Also, it will specify that “home or other location” includes flexi-place work.
F_TELWRK and F_TELOFN <i>Frequency of working away from office</i>	Revise	Rather than asking two separate questions, we will ask how often respondents work away from the office and allow “never” as a response.
F_TRNREQ <i>Employer support of job-related training</i>	Revise	We will change the wording of the response option to: Encouraged by employer.
F_CERTTY1-3 <i>Type of certification/licensure</i>	Revise	We will separate this query into two parts: <ul style="list-style-type: none"> • up to 3 occupational licenses/certificates required by law, and • up to 3 professional licenses/certificates not required by law but required for career advancement. Follow-up for both will collect <ul style="list-style-type: none"> • amount of time required to prepare for license/certificate, • sponsor of license/certification, and • reason for obtaining license/certification.
F_JOBSRH <i>Job search activities</i>	Revise	This item is currently asked of respondents who are not working, but are looking for work. For the full-scale survey, we will ask respondents who are currently working how they found their current job as well.
F_TRAVEL <i>Amount of time spent traveling over the past year</i>	Delete	This item was asked of respondents who were not working and were not enrolled in school. We will delete this question from the full-scale survey because of the small number of responses.
Teacher experiences		
G_PSTNUM <i>Number of teaching jobs ever held</i>	Revise	We will ask about the number of teaching jobs held since graduation.
G_SUBLNG <i>Held long-term sub job</i>	Revise	Reword to: Have you ever had a long-term substitute position of 12 weeks or more?

Table 5.1—Adjustments to field test CATI data elements for B&B:2000/01 full-scale CATI student interview—Continued

Data element	Action proposed	Recommendation
G_CRTFD <i>Fields of certification</i>	Revise	<p>We currently collect up to 5 certifications. We will collect up to 3 fields of certification for the full-scale survey. We will also collect only the general field and delete the detail.</p> <p>We will collect the general fields of certification:</p> <ul style="list-style-type: none"> 1 = General Elementary/Early Childhood 2 = Art/Drama/Music 3 = Bilingual 4 = Business 5 = Economics/Political Systems 6 = English/Journalism/Reading/Language Arts 7 = ESL 8 = Foreign Languages 9 = Health/Physical Education 10 = Math 11 = Science 12 = Secondary Education 13 = Special Education 14 = Social Studies/History/Civics 15 = Vocational/Occupational 16 = Other
G_CRTTP <i>Highest certificate held</i>	Revise	<p>We will revise the response options as follows.</p> <ul style="list-style-type: none"> • Remove “advanced professional certificate” since it takes more than one year to earn it. • Do not get field detail if respondent has “emergency certification.” • If respondent has a “regular/standard state certificate, a probationary, or a temporary certificate,” then follow up with the field detail.
G_NATCRT <i>National Board Certification</i>	Delete	This question is not appropriate for the 1-year follow-up as it takes at least 5 years to earn.
G_PRVCRT <i>Certifications from private organizations</i>	Revise	This question was asked only of certified teachers. In the full-scale survey, we will ask all teachers.
G_PRPCLS <i>Prepared for classroom management</i>	Add	We will ask respondents if they feel prepared to “manage the classroom.”
G_TCHSB <i>Subjects taught at school 1 and 2</i>	Revise	We will make this series of items consistent with fields of certification.
G_NUMCLS <i>Number of sections/periods taught per day</i>	Revise	We will include an option for teachers who teach in a “self-contained” classroom.
G_NUMSTD <i>Number of students taught</i>	Add	We will ask respondents the number of students they teach per day.

Table 5.1—Adjustments to field test CATI data elements for B&B:2000/01 full-scale CATI student interview—Continued

Data element	Action proposed	Recommendation
G_LFTTCH <i>Reasons respondent left teaching</i>	Revise	Add response option 13: 1 = MOVED OR MOVING DUE TO FAMILY/PERSONAL REASONS 2 = PREGNANCY/CHILD REARING 3 = HEALTH REASONS/DISABILITY 4 = TO PURSUE ANOTHER CAREER OUTSIDE OF EDUCATION 5 = TO TAKE COURSES TO IMPROVE CAREER OPPORTUNITIES IN EDUCATION 6 = TO TAKE COURSES TO IMPROVE CAREER OPPORTUNITIES OUTSIDE EDUCATION 7 = SCHOOL STAFFING ACTION (E.G., REDUCTION-IN-FORCE, LAYOFF) 8 = NOT INTERESTED IN TEACHING 9 = DISLIKED/DISSATISFIED WITH TEACHING AS A CAREER 10 = NOT WILLING TO PURSUE TRAINING NECESSARY TO TEACH 11 = TO MOVE INTO SCHOOL ADMINISTRATION 12 = LOW PAY 13 = <u>LONG HOURS/WORKLOAD OUTSIDE THE CLASSROOM</u> 14 = TO MOVE INTO OTHER NON-TEACHING SCHOOL JOB (E.G., COUNSELOR, FULL-TIME) 15 = OTHER
G_PREP <i>Teacher preparation activities</i>	Revise	We will ask this question of current teachers who were base-year nonrespondents.
G_NOAPW <i>Reasons for not applying for a teaching position</i>	Revise	Add response options 14-18: 1 = NOT INTERESTED IN TEACHING 2 = ALREADY HAD A TEACHING JOB 3 = NEEDED MORE EDUCATION 4 = HAD COURSEWORK BUT NOT READY TO APPLY 5 = JOBS HARD TO GET 6 = DID NOT LIKE STUDENT TEACHING 7 = MORE MONEY IN OTHER JOB OFFER 8 = MORE PRESTIGE IN OTHER JOB OFFER 9 = WANTED OTHER OCCUPATION 10 = LOW PAY 11 = POOR TEACHING CONDITIONS 12 = FAMILY RESPONSIBILITIES/CARING FOR CHILDREN 13 = <u>ALREADY HAS NON-TEACHING JOB</u> 14 = <u>HAVEN'T TAKEN REQUIRED TEST(S) YET</u> 15 = <u>UNABLE TO PASS REQUIRED TEST(S)</u> 16 = <u>NOT YET CERTIFIED</u> 17 = OTHER

Student Information Leaflet

B&B:2000/2001

As a participant in B&B:2000/2001 you will have the opportunity to help researchers better understand the undergraduate experiences of bachelor degree recipients and how they relate to subsequent graduate or professional education and/or initial labor market outcomes.

We have prepared this leaflet to anticipate questions you may have regarding B&B:2000/2001. If you have additional questions or concerns about the study, please contact the B&B Project Director or Project Officer listed on the back of this leaflet.

What is B&B:2000/2001?

Who is conducting the study?

Why should I participate?

How will the data be used?

When will the study be conducted?

Will my answers be kept Confidential?

How long is the interview?

Where Can I Get More Information About B&B:2000/2001?

If you have any questions or concerns about the study, please contact the B&B Project Director or Project Officer:

RTI Project Director:
Dr. John Riccobono
1-800-334-6571

NCES Project Officer:
Dr. Andrew Mallick
Andrew_Mallick@ed.gov
202-502-7387

Kristin Perry
Kristin_Perry@ed.gov
202-502-7426

You may also contact us by:
Email: BB2001@ed.gov
Fax: 919-541-7014
TDD: 919-541-6938

Please visit the NCES website for additional information about B&B:2000/2001 and other educational research:
<http://nces.ed.gov>

If you have questions about your rights as a participant, please contact:
Dr. Wendy Wascher
Research Triangle Institute
1-800-334-6571

March 2000
7306-900-040

B&B
2000/2001
Baccalaureate and Beyond

Directed by:
National Center for Education Statistics
U.S. Department of Education

Conducted by:
Research Triangle Institute
Research Triangle Park, NC 27709-2194

Page 2 leaflet

What is B&B: 2000/2001

The Baccalaureate & Beyond 2000/2001 is designed to study the activities and experiences of recent bachelor degree recipients, who were first selected to be interviewed as part of the National Postsecondary Student Aid Study (NPSAS) and are now in their first year after graduation. B&B addresses such issues as:

- entry into the labor force and relationship of initial occupation to training
- entry and persistence of newly-qualified teachers into the teaching profession
- participation in graduate and other post-baccalaureate education and
- level of debt.

As a participant in B&B, you will provide information that will be combined with that collected from other respondents to produce national statistics used by education policy makers at the local, state, and national levels. For example, in past studies, we learned that:

- Two-thirds of bachelor's degree recipients who started college immediately after high school completed their degree within 5 years.
- About one-fifth (17%) of all bachelor's degree recipients enroll in graduate or professional programs within one year of earning their degree.
- One year after graduating, about eight out of ten bachelor's degree recipients expect to earn an advanced degree.

Who is conducting the study?

B&B:2000/2001 is conducted under contract for the U.S. Department of Education's National Center for Education Statistics (NCES) by Research Triangle Institute (RTI). RTI is a not-for-profit research organization in North Carolina. B&B is authorized by the National Education Statistics Act of 1994 (PL 103-382).

Why should I participate?

By participating, you have the opportunity to help researchers, educational practitioners, and policymakers better understand how collegiate experiences affect early life transitions of bachelor degree recipients. Your responses will also help the federal government to assess the outcomes of postsecondary education, improve access to education, and improve financial aid packages to those who need financial help.

When will the study be conducted?

The B&B field test is being conducted in the summer of 2000 and the full scale study will begin in the summer of 2001. The study will involve approximately 12,000 baccalaureate recipients randomly selected from 640 colleges and universities.

Will my answers be kept Confidential?

All information you or others provide will be used for research purposes only. Your responses are confidential and nothing you say will ever be reported in a way that allows you to be identified. Data collected will be used for statistical reports. No individual data will be reported.

Specific procedures we have implemented to ensure confidentiality include:

- All project staff with any access to study data are liable to severe fines and imprisonment for any disclosure of individual responses.
- All electronic data are maintained in secure and protected data files, and all personally identifying information is in files separate from files containing descriptive information.
- These procedures have been reviewed and approved by the federal government and by the RTI Committee for the Protection of Human Subjects.

How will the data be used?

The data you provide will be used by policy makers at federal, state, and local levels to develop and revise a broad range of education policies and programs relating to undergraduate and graduate education and to assess rates of return on the investment in higher education.

How long is the interview?

The interview will last approximately 15-25 minutes. When we call, you can immediately complete the interview or schedule an appointment for a time that is more convenient for you. Participation in this study is voluntary. However, your participation is essential in making this study a success.

Letter to NPSAS Respondents

Dear «p_fname» «p_lname»:

You were selected last year to participate in a U.S. Department of Education study of students enrolled during 1998–99 (National Postsecondary Student Aid Study). We are conducting a one-year follow-up study of recent bachelor's degree recipients (Baccalaureate and Beyond) and we need your participation to learn about your transition from college to work or to graduate school.

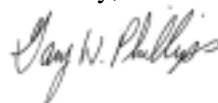

The study is being conducted for the U.S. Department of Education's National Center for Education Statistics (NCES) by the Research Triangle Institute (RTI), a nationally recognized research organization located in North Carolina. An interviewer from RTI will call to conduct a telephone interview with you in the near future. The interviewer will ask you about your early career experiences, educational achievements, community activities and level of debt. The interview will take about 15 to 25 minutes.

Please be assured that both NCES and RTI follow strict confidentiality procedures to protect the privacy of study participants and the confidentiality of the information collected. We need your help in collecting these data. Your participation is voluntary but your responses are important to make the results of this study accurate and timely.

Enclosed you will find a leaflet with a brief description of the study, how you were selected, and confidentiality procedures. We would also like your help in updating our records. ***Please take a few minutes to verify, correct, or update the enclosed Address Update Information Sheet and return it to RTI in the enclosed postage-paid envelope.*** If you have any questions about the study, please contact Dr. John Riccobono, Project Director, at RTI. The toll free number is 1-800-334-8571. Persons who are hearing or speech impaired may call us (toll free) at 1-919-541-6538 (TTY/TDD).

We sincerely appreciate your assistance and thank you for helping us conduct this important study.

Sincerely,

Gary W. Phillips
Acting Commissioner

According to the Paperwork Reduction Act of 1995, no persons are required to respond to a collection of information unless it displays a valid OMB control number. The valid OMB control number for this information collection is 1850-0666.

Letter to NPSAS Nonrespondents

<CASEID>
<NAME> <DATE>
<ADDRESS>
<ADDRESS2>
<CITY>,<STATE> <ZIP>

Dear <NAME>,

Last year, the U.S. Department of Education initiated the 2000–2001 Baccalaureate and Beyond Longitudinal Study (B&B:2000/01). The study will build upon the information collected in the National Postsecondary Student Aid Study (NPSAS), for which you were selected to participate not long ago. The follow-up to that study will begin in the coming weeks and I would like to urge your continued participation in this important study. B&B collects information about students who graduated from four-year colleges and universities in the academic year 1998–1999. The study provides data about the early career experiences and educational achievements of bachelor's degree recipients. The results of previous B&B studies have been used by policymakers to better understand how the level of undergraduate education debt affects decisions concerning graduate school, employment, and family formation.

The study is being conducted for the U.S. Department of Education's National Center for Education Statistics (NCES) by the Research Triangle Institute (RTI), a nationally recognized research organization located in North Carolina. Please be assured that both NCES and RTI follow strict confidentiality procedures to protect the privacy of study participants and the confidentiality of the information collected.

An interviewer from RTI will call to conduct a telephone interview with you in the near future. The interview will take about 25 minutes to complete, although many interviews will be shorter than that.

Your participation is completely voluntary. However, we do need your help in collecting these data. Your responses are important to make the results of this study accurate and timely.

Enclosed you will find a leaflet with a brief description of B&B, how you were selected, and confidentiality procedures. We would also like your help in updating our records. ***Please take a few minutes to verify, correct, or update the enclosed Address Update Information Sheet and return it to RTI in the enclosed postage-paid envelope.*** If you have any questions about the study, please contact Dr. John Riccobono, Project Director, at RTI. The toll free number is 1-800-334-8571. Persons who are hearing or speech impaired may call us (toll free) at 1-919-541-6538 (TTY/TDD).

We sincerely appreciate your assistance and thank you for helping us conduct this important study.

Sincerely,

Gary W. Phillips
Acting Commissioner

Thank you for your assistance and participation. This information is completely confidential.

Please return this page in the enclosed postage-paid envelope.

Spanish Letter
Carta del Gary Phillips Traducción al Español

El año pasado, usted fue seleccionado para participar en un estudio acerca de estudiantes matriculados durante 1998–1999 para el Departamento de Educación de los Estados Unidos (El Estudio Nacional sobre Asistencia Económica para Estudiantes en Escuelas Post-secundarias o en inglés the National Postsecondary Student Aid Study, NPSAS). Estamos realizando un segundo estudio (el estudio Más Allá de los Estudios Universitarios) para ampliar la información recopilada en NPSAS y necesitamos su participación para aprender sobre su transición de la universidad al trabajo o a los estudios graduados.

El estudio se realiza por Research Triangle Institute (RTI) para el Centro Nacional de Estadísticas sobre la Educación (NCES), parte del Departamento de Educación de los Estados Unidos. RTI es una organización de investigación reconocida a nivel nacional que está ubicada en Carolina del Norte. Un entrevistador de RTI lo llamará para realizar una entrevista con usted por teléfono pronto. El entrevistador le preguntará acerca de las primeras experiencias en la carrera, los logros educativos, las actividades comunitarias, y el nivel de deuda. La entrevista durará aproximadamente 15–25 minutos.

Tenga la seguridad en saber que NCES y RTI exigen el mantenimiento de confidencialidad para proteger la privacidad de los participantes en estudios de investigación y la confidencialidad de la información recopilada. Necesitamos su ayuda para recopilar estos datos. Su participación es completamente voluntaria pero sus respuestas son imprescindibles para asegurar que los resultados de este estudio son precisos.

Adjuntado encuentre un folleto que contiene una descripción breve del estudio, así como la manera en que usted fue seleccionado y el procedimiento de confidencialidad. Además, nos gustaría su ayuda para actualizar nuestros archivos. ***Favor de tomar unos minutos para verificar, corregir, o poner al día el Formulario para Actualizar la Dirección del Domicilio adjuntado y devolverlo a RTI en el sobre sellado adjuntado.*** Si tiene cualquier pregunta acerca del estudio, favor de comunicarse con el director del proyecto, Dr. John Riccobono de RTI. El número telefónico gratuito es 1-800-334-8571. Personas con un impedimento auditivo o de habla pueden llamar al número (gratuito) 1-919-541-6538 (TTY/TDD).

Le agradecemos sinceramente de antemano su asistencia y su ayuda en la realización de este estudio importante.

De acuerdo a la Ley de Reducción de Papeleo de 1995, ningunas personas están requeridas a responder a una encuesta a menos que tenga un número válido de control otorgado por el OMB. El número válido de control otorgado por el OMB para esta recolección de datos es el 1850-0666.

Appendix C

Field Test Data Elements

Field Test Data Elements

Data element
Undergraduate enrollment history
Term and year first began undergraduate education
Name of first undergraduate college attended (on-line coding)
Beginning attendance status (full-time/part-time)
Any remedial or developmental courses required first year
Any advanced placement or credits by examination accepted
Local residence first year (on campus/off campus/with parents)
Number of hours/week worked while enrolled first year
Worked on-campus or off-campus
Did parents pay some or all of the tuition for first year? (y/n)
Received grants or scholarships first year (y/n)
Terms/years enrolled at first college
Received a certificate or associate's degree at first college (y/n)
Number and names of other colleges attended
Number of transfer credits accepted at other colleges
Terms/year attended other colleges
Received a certificate or associate's degree at other colleges (y/n)
Reasons for beginning at 2-year college (financial/academic/personal/location)
Reasons for transfers (financial/academic/personal/location)
Reasons for stopout terms (financial/academic/personal/location)
Reasons for enrollment gaps of 2 or more years (financial/academic/personal/location)
Academic history
Ever withdraw from courses because of academic difficulties (y/n)
Ever receive any incomplete grade (y/n)
Ever repeat a course to obtain a higher grade (y/n)
Receive any type of honors or distinction at graduation (y/n)
Undergraduate student loan debt
Total amount owed on undergraduate student loans
Amount of monthly payments
Parents helping to repay the loans (y/n)
Amount borrowed/owed from family or friends
Current status (at time of interview) — all that apply:
<ul style="list-style-type: none"> • Working for pay at a full-time or part-time job. • Taking courses toward a graduate or professional degree. • Taking other courses. • Serving in an internship or training program. • Serving on active duty in the armed forces. • Keeping house (full-time homemaker). • Holding a job but on temporary layoff from work or waiting to report to work. • Looking for work. • Traveling. • Volunteering (Peace Corps, VISTA).
Graduate or professional school enrollment
Name of institution attending (on-line coding)
Degree program/field of study (on-line coding)
Reason for choosing this institution (reputation/faculty/location/financial aid/can go part-time)
Full-time or part-time attendance
Received or expect to receive graduate degree/certificate by July (specify)

Field Test Data Elements

Data element
Sources of funds for expenses <ul style="list-style-type: none"> • Parents • Loans • Assistantships • Fellowships • Waivers • Work • Spouse • Employer
Amount paid for annual tuition (net of fellowships and waivers)
Number of hours worked per week while enrolled
Consider yourself primarily an employee or student
Type of assistantship (teaching/research/federally funded research)
Amount of assistantship
Amount of fellowship
Source of fellowship funds (institution/federal/state/other)
Future education
Taking any courses for credit in undergraduate, vocational, or non-degree programs (y/n)
If yes, reasons for taking these courses <ul style="list-style-type: none"> • Job skills • Prepare for license or certificate • Earn second BA • Prepare for graduate school
Type of institution offering the courses
Expect to pursue a higher degree (y/n)
Type of degree/field of study expected
When expect to start (next year/2 years/5 years/more than 5)
Reasons for delay: <ul style="list-style-type: none"> • Needed money to support family or pay for other financial obligations. • Failed to obtain needed financial aid. • Family or personal reasons (other than money). • Failed to meet application deadline. • Not admitted to school of choice. • Want a break from school. • Have/had a good job opportunity, or a military commitment. • Career plans indefinite. • Want or need work experience before attending graduate school.
Reasons for not planning to pursue any higher degree: <ul style="list-style-type: none"> • Can't afford it. • Can't get financial aid. • Family or personal reasons (other than money). • Failed to meet application deadline (applicable?). • Not admitted to school of choice. • Tired of school/don't like school. • Have/had a good job opportunity, or a military commitment. • Career plans indefinite. • Want or need work experience before attending graduate school.
Lifetime Learning Tax Credit
Are you aware of the Lifelong Learning Tax Credits available (y/n)
Have you used these (y/n)
Do you plan to use them in the next tax filing (y/n)
Has their availability influenced your decision to continue education (y/n)

Field Test Data Elements

Data element
Employment at time of interview
Employed as an elementary/secondary school teacher, or teacher's aide, substitute, (y/n) (if yes, skip to teacher section)
Employed full-time or part-time
Average number of hours per week worked
Prefer to have a full-time job (y/n)
Working for a temporary agency (y/n)
Type of occupation (on-line coding)
Type of duties (specify)
Type of industry (on-line coding)
Type of firm (for-profit/non-profit/government/self-employed)
Size of the company (number of employees)
Salary (indicate per time period)
Receive health and retirement benefits (y/n)
Which of the following best describes your current job?
<ul style="list-style-type: none"> Continuing in the job I had before graduating Beginning of a career in this occupation or industry Job to prepare for graduate school Temporary job while deciding on graduate school or career direction Way to support myself while pursuing other interests Only job I could find Other, specify
Related to undergraduate major (closely/somewhat/not at all)
Does job have career potential (definite/possible/not much)
Satisfied in job with: (y/n)
<ul style="list-style-type: none"> Pay and fringe benefits Importance and challenge Opportunity for advancement Opportunity to use training and education Job security Opportunity for further training and education
Flexibility of work schedule
Employment status in April
<ul style="list-style-type: none"> Working full-time Working part-time Looking for work Enrolled as full-time student Not looking for work
Job training
Any job-related or professional development training offered (y/n)
Required, encouraged, or on your own?
During working hours (y/n)
At place of work (y/n)
Tuition reimbursement to take courses (y/n)
Purpose of training (for current job/promotion/different job)
Will training lead to certification (y/n)
Current demographics
Household composition:
<ul style="list-style-type: none"> Living alone. Living with spouse/partner. Living with parents. Living with roommate.
Marital status (never married/married/separated/divorced)
Number of dependents

Field Test Data Elements

Data element
Personal total income for this calendar year
Spouse/partner employed or full-time student
Spouse's/partner's income this calendar year
Spouse's/partner's level of education
Assets and debt
Own a house or condo (y/n)
Monthly mortgage amount
Monthly rent
Own any motor vehicles (y/n)
Monthly auto payments
Balance owed on last month's credit cards
Undergraduate student loan amount owed by spouse/partner
Spouse's/partner's monthly student loan payments
Civic and volunteer activity
Registered to vote (y/n)
Voted in last presidential election (y/n)
Ever voted in any national, state, or local election (y/n)
Perform any community service/volunteer work in last year (y/n)
Identifying prospective teacher pipeline members
(Those who taught, were trained or certified, or were considering teaching)
If ever worked as teacher, teacher's aide, substitute teacher at K-12 level
Types of position held, when first held:
Regular elementary/secondary school teacher (month/year first so employed)
<ul style="list-style-type: none"> Substitute teacher (month/year first so employed) If yes, substitute taught to get permanent K-12 job? Teacher's aide (month/year first so employed) If yes, worked as teacher's aide to get permanent K-12 job? Itinerant teacher (month/year first so employed)
Currently certified to teach in any of grades K-12 in any state?
<ul style="list-style-type: none"> Date first certified (month/year) Highest type of certification Fields in which certified Grade levels at which certified Completed or completing student teaching or teacher ed. practicum (y/n) Taken or taking courses toward certification (y/n)
Planning to take an examination for teacher certification or license? (y/n)
Are you currently considering teaching at K-12 level?
Teaching job applications
Applied for teaching jobs since completing degree (y/n)
<ul style="list-style-type: none"> How many jobs applied for? Received any offers? Accepted any offers?
Reasons for rejecting offers:
<ul style="list-style-type: none"> Received offer after another job was accepted Pay was not adequate Job offer too far from home Job offer in dangerous/difficult school Offer not in area for which I was qualified Another job offered more interesting/challenging work

Field Test Data Elements

Data element
Reasons did not apply for teaching position: <ul style="list-style-type: none"> • Already had teaching job • Not interested in teaching • Needed more education • Had coursework but not ready to apply • Jobs hard to get • Student teaching was discouraging • More money/prestige in other job • Wanted other occupation • Haven't taken/couldn't pass required test or not yet certified • Family responsibilities/caring for children
Teaching experiences
Participated in teacher internship program?
How well did your student teaching or internship experience prepare you for teaching?
How well did your education courses prepare you for teaching?
How well did your academic courses in college prepare you for teaching?
How well prepared do you feel to integrate educational technology into the grade or subjects that you teach (very well/moderately well/somewhat/not at all prepared)
How many K-12 teaching jobs (not including teacher's aide or substitute teaching jobs) have you held?
For first and last/current K-12 teaching jobs (not substitute or teacher's aide jobs): <ul style="list-style-type: none"> • Start and end date • Sector and level of school • Whether participated in formal induction program (first job only) • Grades taught • Subject areas taught • Team taught? • Number of classes/groups taught per day? • Prepared to teach subjects taught? • Comparability of workload with other teachers in school (first job only) • School's effectiveness in assisting new teachers with: (first job only) • Student discipline • Instructional methods • Curriculum • Adjusting to school environment • Taught full/part-time? • Academic year base salary
Satisfaction with aspects of teaching: <ul style="list-style-type: none"> • Student motivation to learn • School learning environment • Student discipline and behavior • Class size • Support from parents • Esteem of society for teaching profession • Support from school administration

Appendix D

Facsimile Instruments

CATI Facsimile Questionnaire.....	93
Abbreviated Facsimile Instrument	153
Reinterview Facsimile Instrument.....	163

Note: The instruments in Appendix D are included here as they were administered in the field test, without the changes suggested for the full-scale study.

- 5 = CHILDREN/DEPENDENTS

[If D_HSHLD1/2/3 is less than or equal to 0, go to D_DEPS]

[If D_HSHLD1/2/3 equals 1, go to D_DEPS]

[If D_HSHLD is less than or equal to 0, go to D_DEPS]

Appendix D
Section D: Student Background

>D_DEPS<

Do you have any children that you
[If D_MAR equals 2] and your spouse
support financially?

1 = YES
2 = NO

[If D_DEPS equals 1, go to D_DAGE]
[If D_DEPS equals 2,-1, or -2, go to
D_EMP99]

>D_DAGE<

How many of those children are...

Under 5? (0-9)
Aged 5 to 16? (0-9)
Over 16? (0-9)

[If D_DAGE1/2/3 equals 0, go to
D_DEPCHK]
[Else go to D_EMP99]

>D_DEPCHK<

Let me make sure I entered that
correctly. Do you have children that
you (and your spouse) support
financially?

1 = YES
2 = NO

[If D_DEPCHK equals 1, go to D_DAGE]

>D_EMP99<

Now I'd like to ask you a few
questions about your employment in
1999. Did you work for pay in
(calendar year) 1999?

1 = YES
2 = NO

[If D_EMP99 equals 1, go to D_INC99]
[If D_EMP99 equals 2,-1, or -2, go to
D_SPSEMP]

>D_INC99<

How much did you earn from work in
1999?

RANGE (\$1 - \$3,000,000):

[If D_INC99 is greater than 100,000,
go to D_INC99V]
[Else go to D_SPSEMP]

>D_INC99V<

Let me verify that amount. Your
income for 1999 was: \$[fill D_INC99].
Is that correct?

1 = YES
2 = NO

[If D_INC99V equals 2, go to
D_INCS99]
[If D_INC99V equals 1,-1, or -2, go
to D_SPSEMP]

>D_SPSEMP<

[If D_MAR is not equal to 2 go to
D_CAR]

Did your spouse work for pay in
(calendar year) 1999?

1 = YES
2 = NO

[If D_SPSEMP equals 1, go to
D_INCS99]
[If D_SPSEMP equals 2,-1, or -2, go
to D_SPSED]

>D_INCS99<

How much did your spouse earn from
work in 1999?

RANGE (\$1 - \$3,000,000):

[If D_INCS99 is greater than 100,000
go to D_INCS99V]
[Else go to D_SPSED]

>D_INS99V<

Let me verify that amount. Your spouse's income for 1999 was: \$[fill D_INCS99]

Is that correct?

- 1 = YES
- 2 = NO

[If D_INS99V equals 2, go to D_INCS99]
[If D_INS99V equals 1,-1, or -2, go to D_SPSSED]

>D_SPSSED<

[If D_MAR is not equal to 2 go to D_CAR]

What is the highest level of education your spouse has completed?

- 1 = DID NOT COMPLETE HIGH SCHOOL
- 2 = HIGH SCHOOL DIPLOMA OR EQUIVALENT
- 3 = VOCATIONAL/TECHNICAL TRAINING
- 4 = LESS THAN 2 YEARS OF COLLEGE
- 5 = TWO OR MORE YEARS OF COLLEGE/ASSOCIATE'S DEGREE
- 6 = BACHELOR'S DEGREE
- 7 = MASTER'S DEGREE OR EQUIVALENT
- 8 = MD, LLB, JD OR OTHER ADVANCED DEGREE
- 9 = PHD OR EQUIVALENT

>D_SPED99<

Was your spouse enrolled in college or graduate school during the 99-2000 school year?

IF YES, PROBE TO FIND OUT IF FULL-TIME OR PART-TIME

- 0 = NO
- 1 = YES, FULL-TIME
- 2 = YES, PART-TIME
- 3 = YES, MIXED ENROLLMENT

>D_SPAID<

[If D_SPSSED is less than 3 or D_MAR is not equal to 2, go to D_CAR]

Did your spouse ever receive any student loans to help pay for his/her undergraduate education?

- 1 = YES
- 2 = NO

[If D_SPAID equals 1, go to D_SPRPY]
[If D_SPAID equals 2,-1, or -2, go to D_CAR]

>D_SPRPY<

Is your spouse currently repaying his/her student loans?

About how many hours did you typically work per week while you were going to school (during your first year)?

RANGE (1-80):

>CREMP99<

[if CDEMP99 eq <> go to CRGRDENR]

Now I'd like to ask you a few questions about your employment in 1999. Did you work for pay in (calendar year) 1999?

- 1 = YES
- 2 = NO

<1> [go to CRINC99]
<2,-1,-2> [go to CRGRDENR]

>CRINC99<

[if CDINC99 eq <> go to CRGRDENR]

How much did you earn from work in 1999?

RANGE (\$1 - \$3,000,000):

>CRGRDENR<

[if CEGRDENR eq <> go to CROTHENR]

Now I'd like to ask you some questions about your activities since you graduated from [CABACHSC].

Are you currently enrolled in a graduate or professional program?

- 1 = YES
- 2 = NO

<1> [go to CRLIFLNG]

Appendix D
Reinterview Facsimile Instrument

>CROTHENR<

[if CEOTHENR eq <> go to CRLIFLNG]

Are you currently taking any
courses for credit in
undergraduate, vocational, or non-
degree programs?

- 1 = YES
- 2 = NO

>CRAPPLY<

[if CEAPPLY eq <> go to CRFUTENR]

Are you applying for or do you
expect to apply for graduate school
for the 2000-2001 school year?

- 1 = YES
- 2 = NO

<1> [go to CRLIFLNG]

>CRFUTENR<

[if CEFUTENR eq <> go to CRLIFLNG]

Do you expect to enroll in a degree
program in the next 10 years?

- 1 = YES
- 2 = NO

>CRLIFLNG<

[if CELIFLNG eq <> go to CRCURTCH]

When you filed your 1999 taxes, did
you \ [if SJAGE lt <30>] or your
parents claim the federal Lifetime
Learning Tax Credit?

- 0 = NEVER HEARD OF IT
- 1 = YES
- 2 = NO

>CRCURTCH<

[if CFCURTCH eq <> go to CRCURJOB]

Are you currently employed as a
teacher, a teacher's aide, or a
substitute teacher at the K-12
level?

- 1 = YES
- 2 = NO

[if CRCURTCH eq <1> go to CREND]
[if CFEMPCUR eq <1> or <2> go to
CRCURJOB]
[else go to CREND]

>CRCURJOB<

[if CFCURJOB eq <> go to CRRELMJ]
When we talked to you last, you
said that you were employed as a
[CFOCCENR].

Would you consider this job to be
the start of your career in this
occupation or industry?

**INTERVIEWER: PROBE IF RESPONDENT
SAYS NO.**

- 1 = YES
- 2 = CONTINUING IN THE JOB HELD
BEFORE GRADUATION
- 3 = PREPARING FOR GRADUATE SCHOOL
- 4 = TEMP JOB - DECIDING ON FUTURE
EDUCATION/CAREER
- 5 = PAYS THE BILLS
- 6 = ONLY JOB AVAILABLE
- 7 = OTHER - SPECIFY

>CRRELMAJ<

[if CFRELMAJ eq <> go to CRCOSIZE]
[if YMAJOR ne <>]

**INTERVIEWER: REPORTED UG MAJOR
=[YMAJOR]**

[endif]
[if CFOCCENR ne <-1> and CFOCCENR
ne <-2>]Would you say your job as
a/an [CFOCCENR] is [else]
Would you say your job is...

- 1 = Closely,
- 2 = Somewhat, or
- 3 = Not related to your
undergraduate major?

>CRCOSIZE<

[if CFCOSIZE eq <> go to CRBENFIT]
[if CFSCHEMP eq <3> go to CRBENFIT]
[if CFEMPTY ne <1> or <2> go to
CRBENFIT]

How many employees would you
estimate work for your company or
organization?

**INTERVIEWER: WE ARE REFERRING TO
THE ENTIRE COMPANY, INCLUDING ALL
LOCATIONS.**

- 1 = 1-99
- 2 = 100-1000
- 3 = Over 1000

>CRBENFIT<

[if CFSCHEMP@schemp eq <3> go to
CRLOTH]
[if CFBENFIT@health eq <> go to
CRLOTH]

Now I have some questions about
your benefits.

ENTER 1 = YES, 2 = NO

Does your employer provide you
with...

Health insurance?.....**CFHEALTH**

Retirement benefits (EMPLOYER
PAID)?.....**CRRETIRE**

Additional retirement benefits,
such as a 401(k) or
403(b) (EMPLOYEE
CONTRIBUTIONS)?.....**CROTHFIN**

>CRLOTH<

[if Flnext eq <1> go to CROTHBE2]
[if Flnext eq <2> go to CROTHBE1]

>CROTHBE1<

[if CFSCHEMP eq <3> go to CRFLEX]
Does your employer provide you with
any of the following types of
benefit...

ENTER 1 = YES, 2 = NO

Stock options.....**CFSTOCK**
Life insurance.....**CFLIFINS**
Employee discount.....**CFDISCNT**
Childcare facility.....**CFCCAREF**
Childcare subsidy.....**CFCCARES**
Transit subsidy.....**CFTRANSI**
Fitness facility.....**CFFITNSF**
Fitness subsidy.....**CFFITNSF**
Employee assistance
(COUNSELING).....**CFEMPAST**
If CFEMPAST eq <1-2,-1,-2> go to
CRFLEX]

Appendix D
Reinterview Facsimile Instrument

>CROTHBE2<

[if CFSCHEMP eq <3> go to CRFLEX]
Does your employer provide you with
any other type of benefits?

1 = YES
2 = NO

<1> [go to CROTHBS]
<2,-1,-2> [go to CRFLEX]

>CROTHBS<

What are the other benefits
provided by your employer?

ENTER 0 FOR NO MORE.

[CFOTHBS1/2/3/4/5/6]
[go to CRFLEX]

>CRFLEX<

[if CFFLEX eq <> go to CREND]

Sometimes personal circumstances
require that your work schedule be
flexible. Some employers are
responding to this need by allowing
their employees greater flexibility
in the hours that they work and by
allowing employees to telecommute
or work from home.

Would you say your work schedule
is...

1 = Very flexible - YOU ARE ABLE TO
SET YOUR OWN SCHEDULE AS LONG
AS YOU WORK A MINIMUM NUMBER OF
HOURS.

2 = Somewhat flexible - YOU
GENERALLY WORK A SET SCHEDULE,
BUT YOU CAN MODIFY IT IF
NECESSARY WITH SUPERVISOR
APPROVAL.

3 = Not flexible at all - YOU WORK
THE SAME SCHEDULE ALL THE TIME.

TELEPHONE INTERVIEWER TRAINING AGENDA
(March 21-25, 2000)**

<i>Tuesday</i>		<u>240 minutes</u>	6:00p-10:00p
(Michael Link)	Welcome and Introduction of TIs	15 minutes	6:00p - 6:15p
Topic 1	Overview of B&B:2000/2001 (Power Point Presentation)	20 minutes	6:15p - 6:40p
(John Riccobono)	- Background and purpose of B&B:2000/2001 - Study design - Types of questions included - Introduction of project staff		
(Kristin Perry)	Remarks from NCES Project Officer	10 minutes	6:40p - 6:50p
Topic 2	Overview of the Training Session	10 minutes	6:50p - 7:00p
(Michael Link)	- Training agenda and rules		
Topic 3	Confidentiality and Informed Consent	15 minutes	7:00p - 7:15p
(Lead Trainer)	- Review Signed forms - Review materials mailed to parents & students		
Topic 4	Demonstration Interview: Audiotaped with dataview projection of screens (Valerie Carson profile)	45 minutes	7:15p - 8:00p
(Michael Link)			
BREAK		15 minutes	8:00p - 8:15p
Topic 5	Question and Answer sheet review (round robin)	15 minutes	8:15p - 8:30p
(Michael Link)			
Topic 6	B&B Questionnaire Review of Q-by-Qs	60 minutes	8:30p - 9:30p
(Jennifer Wine)	-Sections A, B, D		
(Michael Link & TSU Assistant)	Round Robin Mock Interview #1 (Zenith Huston Profile) Sections A, B, D (as time permits)	20 minutes	9:30 - 9:50p
(TSU Assistant)	Production Sheet Discussion and Entry	10 minutes	9:50p -10:00p

Appendix E
Table of Contents of Telephone Interviewer Manual and Training Agenda

Wednesday		<u>240 minutes</u>	6:00 - 10:00p
(Michael Link)	Question and Answer sheet review (round robin)	15 minutes	6:00p - 6:15p
Topic 6 (Melissa Biber)	B&B Questionnaire Q-by-Q Review (Continued) Sections E, F, G	90 minutes	6:15p - 7:45p
BREAK		15 minutes	7:45p - 8:00p
(Michael Link & TSU Assistant)	Round Robin Mock Interview #1 (Zenith Huston Profile) Sections E, F, G (start where left off on Tuesday)	45 minutes	8:00p - 8:45p
Topic 7 (Michael Link)	Overview of User Exits in Questionnaire - For each (IPEDS; Major; Occ/Industry; Enrollment): Conceptual overview diagram Screen-by-screen review on dataview Hands-on navigation practice	65 minutes	8:45p - 9:50p
(TSU Assistant)	Production Sheet Entry	10 minutes	9:50p - 10:00p
Thursday		<u>240 minutes</u>	6:00p - 10:00p
(Michael Link)	Question and Answer sheet review (round robin)	15 minutes	6:00p - 6:15p
Topic 8 (Michael Link: trainer, Mike Brannigan: respondent, & TSU Assistant)	Round Robin Mock #2 (Jeff Powell profile)	60 minutes	6:15p - 7:15p
Topic 9 (Michael Link)	User Exits Review and Written Exercises	45 minutes	7:15p - 8:00p
BREAK		15 minutes	8:00p - 8:15p
Topic 10 (Michael Link & Mike Brannigan)	B&B Front End Module Overview of Contacting/locating procedures Intro to roster line concept (on data view) QxQ Review Examples on Dataview	30 minutes	8:15p - 8:45p
	B&B Front End Practice	65 minutes	8:45p - 9:50p
(TSU Assistant)	Production Sheet Entry	10 minutes	9:50p - 10:00p

Appendix E

Table of Contents of Telephone Interviewer Manual and Training Agenda

Friday 120 minutes 5:00p - 9:00p

(Rusty Galloway) Structured Individual Practice at 300 Park TSU Facility*

- Orientation to TSU Facility
- Structured Practice
- Listen to interview in client room

**Interviewers will be required to sign up for a 2-hour block of time between 5pm and 9pm to complete their structure practice.*

Saturday 450 minutes 9:00a - 4:30p

(Michael Link) Question and Answer sheet review (round robin) 15 minutes 9:00a - 9:15a

Topic 11 More Contacting/Locating/Front-end Practice 45 minutes 9:15a - 10:00a
(Michael Link & Mike Brannigan)

Topic 12 Round Robin Mock #3 (Raghib Suresh profile) 45 minutes 10:00a - 10:45a
(Michael Link: trainer,
Mike Brannigan: respondent,
TSU Assistant)

BREAK 15 minutes 10:45a - 11:00a

SMALL GROUP ACTIVITY SESSION 1	75 minutes	11:00a-12:15p
---------------------------------------	-------------------	----------------------

Group A: Topic 13 Refusal Avoidance
(Michael Link)
- Brief overview of reluctant respondent behavior
- Review / Critique of audiotaped refusal scenarios

Group B: Topic 14 More User Exit Practice and Coding
(Kara Kennedy & Ruth Heuer)

LUNCH 30 minutes 12:15p-12:45p

SMALL GROUP ACTIVITY SESSION 1	75 minutes	12:45a-2:00p
---------------------------------------	-------------------	---------------------

Group B: Topic 13 Refusal Avoidance
(Michael Link)
- Brief overview of reluctant respondent behavior
- Review / Critique of audiotaped refusal scenarios

Group A: Topic 14 More User Exit Practice and Coding
(Kara Kennedy & Ruth Heuer)

BREAK 10 minutes 2:00p - 2:10p

Appendix E**Table of Contents of Telephone Interviewer Manual and Training Agenda**

Topic 15 (Michael Link, & TSU Asst)	Paired Certification Interview - Paired Mock #5a/#5b (Michelle Kim Profile)	80 minutes	2:10p - 3:30p
Topic 16 (Michael Link)	B&B Quality Control Procedures - Monitoring - Reporting problems/Electronic Problem Sheets - QC Meetings	20 minutes	3:30p - 3:50p
Topic 17 (Michael Link)	Question and Answer Session	30 minutes	3:50p - 4:20p
(TSU Assistant)	<i>Production Sheet Entry</i>	10 minutes	4:20p - 4:30p

Listing of NCES Working Papers to Date

Working papers can be downloaded as pdf files from the NCES Electronic Catalog (<http://nces.ed.gov/pubsearch/>). You can also contact Sheilah Jupiter at (202) 502-7444 (sheilah_jupiter@ed.gov) if you are interested in any of the following papers.

Listing of NCES Working Papers by Program Area

No.	Title	NCES contact
Baccalaureate and Beyond (B&B)		
98-15	Development of a Prototype System for Accessing Linked NCES Data	Steven Kaufman
2001-15	Baccalaureate and Beyond Longitudinal Study: 2000/01 Follow-Up Field Test Methodology Report	Andrew G. Malizio
Beginning Postsecondary Students (BPS) Longitudinal Study		
98-11	Beginning Postsecondary Students Longitudinal Study First Follow-up (BPS:96-98) Field Test Report	Aurora D'Amico
98-15	Development of a Prototype System for Accessing Linked NCES Data	Steven Kaufman
1999-15	Projected Postsecondary Outcomes of 1992 High School Graduates	Aurora D'Amico
2001-04	Beginning Postsecondary Students Longitudinal Study: 1996-2001 (BPS:1996/2001) Field Test Methodology Report	Paula Knepper
Common Core of Data (CCD)		
95-12	Rural Education Data User's Guide	Samuel Peng
96-19	Assessment and Analysis of School-Level Expenditures	William J. Fowler, Jr.
97-15	Customer Service Survey: Common Core of Data Coordinators	Lee Hoffman
97-43	Measuring Inflation in Public School Costs	William J. Fowler, Jr.
98-15	Development of a Prototype System for Accessing Linked NCES Data	Steven Kaufman
1999-03	Evaluation of the 1996-97 Nonfiscal Common Core of Data Surveys Data Collection, Processing, and Editing Cycle	Beth Young
2000-12	Coverage Evaluation of the 1994-95 Common Core of Data: Public Elementary/Secondary School Universe Survey	Beth Young
2000-13	Non-professional Staff in the Schools and Staffing Survey (SASS) and Common Core of Data (CCD)	Kerry Gruber
2001-09	An Assessment of the Accuracy of CCD Data: A Comparison of 1988, 1989, and 1990 CCD Data with 1990-91 SASS Data	John Sietsema
2001-14	Evaluation of the Common Core of Data (CCD) Finance Data Imputations	Frank Johnson
Data Development		
2000-16a	Lifelong Learning NCES Task Force: Final Report Volume I	Lisa Hudson
2000-16b	Lifelong Learning NCES Task Force: Final Report Volume II	Lisa Hudson
Decennial Census School District Project		
95-12	Rural Education Data User's Guide	Samuel Peng
96-04	Census Mapping Project/School District Data Book	Tai Phan
98-07	Decennial Census School District Project Planning Report	Tai Phan
2001-12	Customer Feedback on the 1990 Census Mapping Project	Dan Kasprzyk
Early Childhood Longitudinal Study (ECLS)		
96-08	How Accurate are Teacher Judgments of Students' Academic Performance?	Jerry West
96-18	Assessment of Social Competence, Adaptive Behaviors, and Approaches to Learning with Young Children	Jerry West
97-24	Formulating a Design for the ECLS: A Review of Longitudinal Studies	Jerry West
97-36	Measuring the Quality of Program Environments in Head Start and Other Early Childhood Programs: A Review and Recommendations for Future Research	Jerry West
1999-01	A Birth Cohort Study: Conceptual and Design Considerations and Rationale	Jerry West

No.	Title	NCES contact
2000-04	Selected Papers on Education Surveys: Papers Presented at the 1998 and 1999 ASA and 1999 AAPOR Meetings	Dan Kasprzyk
2001-02	Measuring Father Involvement in Young Children's Lives: Recommendations for a Fatherhood Module for the ECLS-B	Jerry West
2001-03	Measures of Socio-Emotional Development in Middle Childhood	Elvira Hausken
2001-06	Papers from the Early Childhood Longitudinal Studies Program: Presented at the 2001 AERA and SRCD Meetings	Jerry West
Education Finance Statistics Center (EDFIN)		
94-05	Cost-of-Education Differentials Across the States	William J. Fowler, Jr.
96-19	Assessment and Analysis of School-Level Expenditures	William J. Fowler, Jr.
97-43	Measuring Inflation in Public School Costs	William J. Fowler, Jr.
98-04	Geographic Variations in Public Schools' Costs	William J. Fowler, Jr.
1999-16	Measuring Resources in Education: From Accounting to the Resource Cost Model Approach	William J. Fowler, Jr.
High School and Beyond (HS&B)		
95-12	Rural Education Data User's Guide	Samuel Peng
1999-05	Procedures Guide for Transcript Studies	Dawn Nelson
1999-06	1998 Revision of the Secondary School Taxonomy	Dawn Nelson
HS Transcript Studies		
1999-05	Procedures Guide for Transcript Studies	Dawn Nelson
1999-06	1998 Revision of the Secondary School Taxonomy	Dawn Nelson
International Adult Literacy Survey (IALS)		
97-33	Adult Literacy: An International Perspective	Marilyn Binkley
Integrated Postsecondary Education Data System (IPEDS)		
97-27	Pilot Test of IPEDS Finance Survey	Peter Stowe
98-15	Development of a Prototype System for Accessing Linked NCES Data	Steven Kaufman
2000-14	IPEDS Finance Data Comparisons Under the 1997 Financial Accounting Standards for Private, Not-for-Profit Institutes: A Concept Paper	Peter Stowe
National Assessment of Adult Literacy (NAAL)		
98-17	Developing the National Assessment of Adult Literacy: Recommendations from Stakeholders	Sheida White
1999-09a	1992 National Adult Literacy Survey: An Overview	Alex Sedlacek
1999-09b	1992 National Adult Literacy Survey: Sample Design	Alex Sedlacek
1999-09c	1992 National Adult Literacy Survey: Weighting and Population Estimates	Alex Sedlacek
1999-09d	1992 National Adult Literacy Survey: Development of the Survey Instruments	Alex Sedlacek
1999-09e	1992 National Adult Literacy Survey: Scaling and Proficiency Estimates	Alex Sedlacek
1999-09f	1992 National Adult Literacy Survey: Interpreting the Adult Literacy Scales and Literacy Levels	Alex Sedlacek
1999-09g	1992 National Adult Literacy Survey: Literacy Levels and the Response Probability Convention	Alex Sedlacek
2000-05	Secondary Statistical Modeling With the National Assessment of Adult Literacy: Implications for the Design of the Background Questionnaire	Sheida White
2000-06	Using Telephone and Mail Surveys as a Supplement or Alternative to Door-to-Door Surveys in the Assessment of Adult Literacy	Sheida White
2000-07	"How Much Literacy is Enough?" Issues in Defining and Reporting Performance Standards for the National Assessment of Adult Literacy	Sheida White
2000-08	Evaluation of the 1992 NALS Background Survey Questionnaire: An Analysis of Uses with Recommendations for Revisions	Sheida White
2000-09	Demographic Changes and Literacy Development in a Decade	Sheida White
2001-08	Assessing the Lexile Framework: Results of a Panel Meeting	Sheida White

No.	Title	NCES contact
National Assessment of Educational Progress (NAEP)		
95-12	Rural Education Data User's Guide	Samuel Peng
97-29	Can State Assessment Data be Used to Reduce State NAEP Sample Sizes?	Steven Gorman
97-30	ACT's NAEP Redesign Project: Assessment Design is the Key to Useful and Stable Assessment Results	Steven Gorman
97-31	NAEP Reconfigured: An Integrated Redesign of the National Assessment of Educational Progress	Steven Gorman
97-32	Innovative Solutions to Intractable Large Scale Assessment (Problem 2: Background Questionnaires)	Steven Gorman
97-37	Optimal Rating Procedures and Methodology for NAEP Open-ended Items	Steven Gorman
97-44	Development of a SASS 1993-94 School-Level Student Achievement Subfile: Using State Assessments and State NAEP, Feasibility Study	Michael Ross
98-15	Development of a Prototype System for Accessing Linked NCES Data	Steven Kaufman
1999-05	Procedures Guide for Transcript Studies	Dawn Nelson
1999-06	1998 Revision of the Secondary School Taxonomy	Dawn Nelson
2001-07	A Comparison of the National Assessment of Educational Progress (NAEP), the Third International Mathematics and Science Study Repeat (TIMSS-R), and the Programme for International Student Assessment (PISA)	Arnold Goldstein
2001-08	Assessing the Lexile Framework: Results of a Panel Meeting	Sheida White
2001-11	Impact of Selected Background Variables on Students' NAEP Math Performance	Arnold Goldstein
2001-13	The Effects of Accommodations on the Assessment of LEP Students in NAEP	Arnold Goldstein
National Education Longitudinal Study of 1988 (NELS:88)		
95-04	National Education Longitudinal Study of 1988: Second Follow-up Questionnaire Content Areas and Research Issues	Jeffrey Owings
95-05	National Education Longitudinal Study of 1988: Conducting Trend Analyses of NLS-72, HS&B, and NELS:88 Seniors	Jeffrey Owings

No.	Title	NCES contact
Achievement (student) - mathematics		
2001–05	Using TIMSS to Analyze Correlates of Performance Variation in Mathematics	Patrick Gonzales
Adult education		
96–14	The 1995 National Household Education Survey: Reinterview Results for the Adult Education Component	Steven Kaufman
96–20	1991 National Household Education Survey (NHES:91) Questionnaires: Screener, Early Childhood Education, and Adult Education	Kathryn Chandler
96–22	1995 National Household Education Survey (NHES:95) Questionnaires: Screener, Early Childhood Program Participation, and Adult Education	Kathryn Chandler
98–03	Adult Education in the 1990s: A Report on the 1991 National Household Education Survey	Peter Stowe
98–10	Adult Education Participation Decisions and Barriers: Review of Conceptual Frameworks and Empirical Studies	Peter Stowe
1999–11	Data Sources on Lifelong Learning Available from the National Center for Education Statistics	Lisa Hudson
2000–16a	Lifelong Learning NCES Task Force: Final Report Volume I	Lisa Hudson
2000–16b	Lifelong Learning NCES Task Force: Final Report Volume II	Lisa Hudson
Adult literacy—see Literacy of adults		
American Indian – education		
1999–13	1993–94 Schools and Staffing Survey: Data File User’s Manual, Volume IV: Bureau of Indian Affairs (BIA) Restricted-Use Codebook	Kerry Gruber
Assessment/achievement		
95–12	Rural Education Data User’s Guide	Samuel Peng
95–13	Assessing Students with Disabilities and Limited English Proficiency	James Houser
97–29	Can State Assessment Data be Used to Reduce State NAEP Sample Sizes?	Larry Ogle
97–30	ACT’s NAEP Redesign Project: Assessment Design is the Key to Useful and Stable Assessment Results	Larry Ogle
97–31	NAEP Reconfigured: An Integrated Redesign of the National Assessment of Educational Progress	Larry Ogle
97–32	Innovative Solutions to Intractable Large Scale Assessment (Problem 2: Background Questions)	Larry Ogle
97–37	Optimal Rating Procedures and Methodology for NAEP Open-ended Items	Larry Ogle
97–44	Development of a SASS 1993–94 School-Level Student Achievement Subfile: Using State Assessments and State NAEP, Feasibility Study	Michael Ross
98–09	High School Curriculum Structure: Effects on Coursetaking and Achievement in Mathematics for High School Graduates—An Examination of Data from the National Education Longitudinal Study of 1988	Jeffrey Owings
2001–07	A Comparison of the National Assessment of Educational Progress (NAEP), the Third International Mathematics and Science Study Repeat (TIMSS-R), and the Programme for International Student Assessment (PISA)	Arnold Goldstein
2001–11	Impact of Selected Background Variables on Students’ NAEP Math Performance	Arnold Goldstein
2001–13	The Effects of Accommodations on the Assessment of LEP Students in NAEP	Arnold Goldstein
Beginning students in postsecondary education		
98–11	Beginning Postsecondary Students Longitudinal Study First Follow-up (BPS:96–98) Field Test Report	Aurora D’Amico
2001–04	Beginning Postsecondary Students Longitudinal Study: 1996–2001 (BPS:1996/2001) Field Test Methodology Report	Paula Knepper

No.	Title	NCES contact
Civic participation		
97–25	1996 National Household Education Survey (NHES:96) Questionnaires: Screener/Household and Library, Parent and Family Involvement in Education and Civic Involvement, Youth Civic Involvement, and Adult Civic Involvement	Kathryn Chandler
Climate of schools		
95–14	Empirical Evaluation of Social, Psychological, & Educational Construct Variables Used in NCES Surveys	Samuel Peng
Cost of education indices		
94–05	Cost-of-Education Differentials Across the States	William J. Fowler, Jr.
Course-taking		
95–12	Rural Education Data User's Guide	Samuel Peng
98–09	High School Curriculum Structure: Effects on Coursetaking and Achievement in Mathematics for High School Graduates—An Examination of Data from the National Education Longitudinal Study of 1988	Jeffrey Owings
1999–05	Procedures Guide for Transcript Studies	Dawn Nelson
1999–06	1998 Revision of the Secondary School Taxonomy	Dawn Nelson
Crime		
97–09	Status of Data on Crime and Violence in Schools: Final Report	Lee Hoffman
Curriculum		
95–11	Measuring Instruction, Curriculum Content, and Instructional Resources: The Status of Recent Work	Sharon Bobbitt & John Ralph
98–09	High School Curriculum Structure: Effects on Coursetaking and Achievement in Mathematics for High School Graduates—An Examination of Data from the National Education Longitudinal Study of 1988	Jeffrey Owings
Customer service		
1999–10	What Users Say About Schools and Staffing Survey Publications	Dan Kasprzyk
2000–02	Coordinating NCES Surveys: Options, Issues, Challenges, and Next Steps	Valena Plisko
2000–04	Selected Papers on Education Surveys: Papers Presented at the 1998 and 1999 ASA and 1999 AAPOR Meetings	Dan Kasprzyk
2001–12	Customer Feedback on the 1990 Census Mapping Project	Dan Kasprzyk
Data quality		
97–13	Improving Data Quality in NCES: Database-to-Report Process	Susan Ahmed
2001–11	Impact of Selected Background Variables on Students' NAEP Math Performance	Arnold Goldstein
2001–13	The Effects of Accommodations on the Assessment of LEP Students in NAEP	Arnold Goldstein
Data warehouse		
2000–04	Selected Papers on Education Surveys: Papers Presented at the 1998 and 1999 ASA and 1999 AAPOR Meetings	Dan Kasprzyk
Design effects		
2000–03	Strengths and Limitations of Using SUDAAN, Stata, and WesVarPC for Computing Variances from NCES Data Sets	Ralph Lee
Dropout rates, high school		
95–07	National Education Longitudinal Study of 1988: Conducting Trend Analyses HS&B and NELS:88 Sophomore Cohort Dropouts	Jeffrey Owings
Early childhood education		
96–20	1991 National Household Education Survey (NHES:91) Questionnaires: Screener, Early Childhood Education, and Adult Education	Kathryn Chandler

No.	Title	NCES contact
96–22	1995 National Household Education Survey (NHES:95) Questionnaires: Screener, Early Childhood Program Participation, and Adult Education	Kathryn Chandler
97–24	Formulating a Design for the ECLS: A Review of Longitudinal Studies	Jerry West
97–36	Measuring the Quality of Program Environments in Head Start and Other Early Childhood Programs: A Review and Recommendations for Future Research	Jerry West
1999–01	A Birth Cohort Study: Conceptual and Design Considerations and Rationale	Jerry West
2001–02	Measuring Father Involvement in Young Children's Lives: Recommendations for a Fatherhood Module for the ECLS-B	Jerry West
2001–03	Measures of Socio-Emotional Development in Middle School	Elvira Hausken
2001–06	Papers from the Early Childhood Longitudinal Studies Program: Presented at the 2001 AERA and SRCD Meetings	Jerry West
Educational attainment		
98–11	Beginning Postsecondary Students Longitudinal Study First Follow-up (BPS:96–98) Field Test Report	Aurora D'Amico
2001–15	Baccalaureate and Beyond Longitudinal Study: 2000/01 Follow-Up Field Test Methodology Report	Andrew G. Malizio
Educational research		
2000–02	Coordinating NCES Surveys: Options, Issues, Challenges, and Next Steps	Valena Plisko
Eighth-graders		
2001–05	Using TIMSS to Analyze Correlates of Performance Variation in Mathematics	Patrick Gonzales
Employment		
96–03	National Education Longitudinal Study of 1988 (NELS:88) Research Framework and Issues	Jeffrey Owings
98–11	Beginning Postsecondary Students Longitudinal Study First Follow-up (BPS:96–98) Field Test Report	Aurora D'Amico
2000–16a	Lifelong Learning NCES Task Force: Final Report Volume I	Lisa Hudson
2000–16b	Lifelong Learning NCES Task Force: Final Report Volume II	Lisa Hudson
2001–01	Cross-National Variation in Educational Preparation for Adulthood: From Early Adolescence to Young Adulthood	Elvira Hausken
Employment – after college		
2001–15	Baccalaureate and Beyond Longitudinal Study: 2000/01 Follow-Up Field Test Methodology Report	Andrew G. Malizio
Engineering		
2000–11	Financial Aid Profile of Graduate Students in Science and Engineering	Aurora D'Amico
Enrollment – after college		
2001–15	Baccalaureate and Beyond Longitudinal Study: 2000/01 Follow-Up Field Test Methodology Report	Andrew G. Malizio

Finance – elementary and secondary schools		
94–05	Cost-of-Education Differentials Across the States	William J. Fowler, Jr.
96–19	Assessment and Analysis of School-Level Expenditures	William J. Fowler, Jr.
98–01	Collection of Public School Expenditure Data: Development of a Questionnaire	Stephen Broughman
1999–07	Collection of Resource and Expenditure Data on the Schools and Staffing Survey	Stephen Broughman

No.	Title	NCES contact
1999–16	Measuring Resources in Education: From Accounting to the Resource Cost Model Approach	William J. Fowler, Jr.
2000–18	Feasibility Report: School-Level Finance Pretest, Public School District Questionnaire	Stephen Broughman
2001–14	Evaluation of the Common Core of Data (CCD) Finance Data Imputations	Frank Johnson
Finance – postsecondary		
97–27	Pilot Test of IPEDS Finance Survey	Peter Stowe
2000–14	IPEDS Finance Data Comparisons Under the 1997 Financial Accounting Standards for Private, Not-for-Profit Institutes: A Concept Paper	Peter Stowe
Finance – private schools		
95–17	Estimates of Expenditures for Private K–12 Schools	Stephen Broughman
96–16	Strategies for Collecting Finance Data from Private Schools	Stephen Broughman
97–07	The Determinants of Per-Pupil Expenditures in Private Elementary and Secondary Schools: An Exploratory Analysis	Stephen Broughman
97–22	Collection of Private School Finance Data: Development of a Questionnaire	Stephen Broughman
1999–07	Collection of Resource and Expenditure Data on the Schools and Staffing Survey	Stephen Broughman
2000–15	Feasibility Report: School-Level Finance Pretest, Private School Questionnaire	Stephen Broughman
Geography		
98–04	Geographic Variations in Public Schools' Costs	William J. Fowler, Jr.
Graduate students		
2000–11	Financial Aid Profile of Graduate Students in Science and Engineering	Aurora D'Amico
Graduates of postsecondary education		
2001–15	Baccalaureate and Beyond Longitudinal Study: 2000/01 Follow-Up Field Test Methodology Report	Andrew G. Malizio
Imputation		
2000–04	Selected Papers on Education Surveys: Papers Presented at the 1998 and 1999 ASA and 1999 AAPOR Meeting	Dan Kasprzyk
2001–10	Comparison of Proc Impute and Schafer's Multiple Imputation Software	Sam Peng
2001–14	Evaluation of the Common Core of Data (CCD) Finance Data Imputations	Frank Johnson
Inflation		
97–43	Measuring Inflation in Public School Costs	William J. Fowler, Jr.
Institution data		
2000–01	1999 National Study of Postsecondary Faculty (NSOPF:99) Field Test Report	Linda Zimble
Instructional resources and practices		
95–11	Measuring Instruction, Curriculum Content, and Instructional Resources: The Status of Recent Work	Sharon Bobbitt & John Ralph
1999–08	Measuring Classroom Instructional Processes: Using Survey and Case Study Field Test Results to Improve Item Construction	Dan Kasprzyk
International comparisons		
97–11	International Comparisons of Inservice Professional Development	Dan Kasprzyk
97–16	International Education Expenditure Comparability Study: Final Report, Volume I	Shelley Burns
97–17	International Education Expenditure Comparability Study: Final Report, Volume II, Quantitative Analysis of Expenditure Comparability	Shelley Burns
2001–01	Cross-National Variation in Educational Preparation for Adulthood: From Early Adolescence to Young Adulthood	Elvira Hausken
2001–07	A Comparison of the National Assessment of Educational Progress (NAEP), the Third International Mathematics and Science Study Repeat (TIMSS-R), and the Programme for International Student Assessment (PISA)	Arnold Goldstein

No.	Title	NCES contact
International comparisons – math and science achievement		
2001–05	Using TIMSS to Analyze Correlates of Performance Variation in Mathematics	Patrick Gonzales
Libraries		
94–07	Data Comparability and Public Policy: New Interest in Public Library Data Papers Presented at Meetings of the American Statistical Association	Carrol Kindel
97–25	1996 National Household Education Survey (NHES:96) Questionnaires: Screener/Household and Library, Parent and Family Involvement in Education and Civic Involvement, Youth Civic Involvement, and Adult Civic Involvement	Kathryn Chandler
Limited English Proficiency		
95–13	Assessing Students with Disabilities and Limited English Proficiency	James Houser
2001–11	Impact of Selected Background Variables on Students' NAEP Math Performance	Arnold Goldstein
2001–13	The Effects of Accommodations on the Assessment of LEP Students in NAEP	Arnold Goldstein
Literacy of adults		
98–17	Developing the National Assessment of Adult Literacy: Recommendations from Stakeholders	Sheida White
1999–09a	1992 National Adult Literacy Survey: An Overview	Alex Sedlacek
1999–09b	1992 National Adult Literacy Survey: Sample Design	Alex Sedlacek
1999–09c	1992 National Adult Literacy Survey: Weighting and Population Estimates	Alex Sedlacek
1999–09d	1992 National Adult Literacy Survey: Development of the Survey Instruments	Alex Sedlacek
1999–09e	1992 National Adult Literacy Survey: Scaling and Proficiency Estimates	Alex Sedlacek
1999–09f	1992 National Adult Literacy Survey: Interpreting the Adult Literacy Scales and Literacy Levels	Alex Sedlacek
1999–09g	1992 National Adult Literacy Survey: Literacy Levels and the Response Probability Convention	Alex Sedlacek
1999–11	Data Sources on Lifelong Learning Available from the National Center for Education Statistics	Lisa Hudson
2000–05	Secondary Statistical Modeling With the National Assessment of Adult Literacy: Implications for the Design of the Background Questionnaire	Sheida White
2000–06	Using Telephone and Mail Surveys as a Supplement or Alternative to Door-to-Door Surveys in the Assessment of Adult Literacy	Sheida White
2000–07	“How Much Literacy is Enough?” Issues in Defining and Reporting Performance Standards for the National Assessment of Adult Literacy	Sheida White
2000–08	Evaluation of the 1992 NALS Background Survey Questionnaire: An Analysis of Uses with Recommendations for Revisions	Sheida White
2000–09	Demographic Changes and Literacy Development in a Decade	Sheida White
2001–08	Assessing the Lexile Framework: Results of a Panel Meeting	Sheida White
Literacy of adults – international		
97–33	Adult Literacy: An International Perspective	Marilyn Binkley
Mathematics		
98–09	High School Curriculum Structure: Effects on Coursetaking and Achievement in Mathematics for High School Graduates—An Examination of Data from the National Education Longitudinal Study of 1988	Jeffrey Owings
1999–08	Measuring Classroom Instructional Processes: Using Survey and Case Study Field Test Results to Improve Item Construction	Dan Kasprzyk
2001–05	Using TIMSS to Analyze Correlates of Performance Variation in Mathematics	Patrick Gonzales
2001–07	A Comparison of the National Assessment of Educational Progress (NAEP), the Third International Mathematics and Science Study Repeat (TIMSS-R), and the Programme for International Student Assessment (PISA)	Arnold Goldstein
2001–11	Impact of Selected Background Variables on Students' NAEP Math Performance	Arnold Goldstein
Parental involvement in education		
96–03	National Education Longitudinal Study of 1988 (NELS:88) Research Framework and Issues	Jeffrey Owings

No.	Title	NCES contact
97–25	1996 National Household Education Survey (NHES:96) Questionnaires: Screener/Household and Library, Parent and Family Involvement in Education and Civic Involvement, Youth Civic Involvement, and Adult Civic Involvement	Kathryn Chandler
1999–01	A Birth Cohort Study: Conceptual and Design Considerations and Rationale	Jerry West
2001–06	Papers from the Early Childhood Longitudinal Studies Program: Presented at the 2001 AERA and SRCD Meetings	Jerry West
Participation rates		
98–10	Adult Education Participation Decisions and Barriers: Review of Conceptual Frameworks and Empirical Studies	Peter Stowe
Postsecondary education		
1999–11	Data Sources on Lifelong Learning Available from the National Center for Education Statistics	Lisa Hudson
2000–16a	Lifelong Learning NCES Task Force: Final Report Volume I	Lisa Hudson
2000–16b	Lifelong Learning NCES Task Force: Final Report Volume II	Lisa Hudson
Postsecondary education – persistence and attainment		
98–11	Beginning Postsecondary Students Longitudinal Study First Follow-up (BPS:96–98) Field Test Report	Aurora D’Amico
1999–15	Projected Postsecondary Outcomes of 1992 High School Graduates	Aurora D’Amico
Postsecondary education – staff		
97–26	Strategies for Improving Accuracy of Postsecondary Faculty Lists	Linda Zimbler
2000–01	1999 National Study of Postsecondary Faculty (NSOPF:99) Field Test Report	Linda Zimbler
Principals		
2000–10	A Research Agenda for the 1999–2000 Schools and Staffing Survey	Dan Kasprzyk
