

CHAPTER 5

Outcomes of Education

This chapter contains tables comparing educational attainment and workforce characteristics. The data show labor force participation and income levels of high school dropouts and high school and college graduates. Population characteristics are provided for many of the measures to allow for comparisons among various demographic groups. Tables 388 through 390 contain data from the U.S. Bureau of Labor Statistics on labor force participation, employment, unemployment, and type of occupation by highest level of educational attainment, sex, age, and race/ethnicity. Tables 391 and 392 provide comparisons of earnings by education level and sex from the U.S. Census Bureau. Table 393 provides literacy scores for adults by education level, employment status, and demographic characteristics. The percentages of high school seniors with various characteristics who work different numbers of hours per week are shown in table 394.

Tables 395 and 396, compiled from U.S. Census Bureau data on high school completers and dropouts, show the labor force participation and college enrollment of high school students within the year after they leave school. The tabulations also provide comparative labor force participation and unemployment rates for high school completers and dropouts. Additional information on college enrollment rates by race/ethnicity and sex has been included to help form a more complete picture of high school outcomes. Table 397 provides data on college enrollment and employment among special education students who have left secondary school. Tables 398 and 399 provide data on the employment outcomes and salaries of college graduates 1 year after graduation. Tables 400 and 401 provide data on drug use of young adults from the Substance Abuse and Mental Health Services Administration. Table 402 provides information on life values of high school seniors and young adults.

Statistics related to outcomes of education appear in other sections of the *Digest*. For example, statistics on educational attainment of the entire population are in chapter 1. More detailed data on the numbers of high school and college graduates can be found in chapters 2 and 3. Chapter 3 contains trend data on the percentage of high school completers going to college. Additional data on earnings by educational attainment may be obtained from the U.S. Census Bureau's Current Population Reports, Series P-60. The U.S. Bureau of Labor Statistics has a series of publications dealing with the educational characteristics of the labor force. Further information

on survey methodologies is in Appendix A: Guide to Sources and in the publications cited in the table source notes.

Labor Force

Adults with higher levels of education generally had higher labor force participation rates than adults with less education (table 388 and figure 21). (People participating in the labor force are those employed or actively seeking employment.) Among people 25 to 64 years old, 86 percent of those with a bachelor's or higher degree participated in the labor force in 2009, compared with 76 percent of those who had completed only high school. In comparison, 63 percent of those ages 25 to 64 who had not completed high school were in the labor force. The 2009 labor force participation rates for those ages 25 to 64 who had completed only high school were higher for Hispanics (78 percent) and Whites (76 percent) than for Asians (74 percent) and Blacks (72 percent) (table 388). Among people ages 25 to 64 with a bachelor's or higher degree, the labor force participation rates for Blacks (87 percent), Whites (86 percent), and Hispanics (86 percent) were higher than the rate for Asians (83 percent).

Unemployment rates were generally higher for people with lower levels of educational attainment than for those with higher levels of educational attainment (table 389 and figure 22). (The unemployment rate is the percentage of people in the labor force who are not employed and who have made specific efforts to find employment sometime during the prior 4 weeks.) The 2009 unemployment rate for adults (25 years old and over) who had not completed high school was 15 percent, compared with 10 percent for those who had completed high school and 5 percent for those with a bachelor's or higher degree. Younger people tended to have higher unemployment rates than did people 25 years old and over (table 389).

The relative difficulties that dropouts encounter in entering the job market are highlighted by comparing their labor force participation rates to those of other youth. Of the 2008–09 high school completers who were not in college in October 2009, 70 percent were in the civilian labor force (employed or looking for work), and 35 percent of those in the labor force were looking for work (table 395). In comparison, 2008–09 high school dropouts participated in the labor force at a lower rate (48 percent) in October 2009, and 55 percent of those in the labor force were looking for work (table 396).

Earnings

For both males and females, full-time year-round workers 25 years old and over who had higher levels of educational attainment generally had higher median annual earnings than did those with lower levels of educational attainment (table E, table 391, and figure 24). In 2009, for example, male bachelor's degree holders working full-time year-round earned 58 percent more than male high school completers, and female bachelor's degree holders working full-time year-round earned 61 percent more than female high school completers.

Among full-time year-round workers 25 years old and over, the earnings of females remained lower than the earnings of males overall, as well as by education level. For example, median 2009 earnings for full-time year-round workers with a bachelor's degree were 33 percent higher for males than for females. Among those whose highest level of educational attainment was high school completion, median 2009 earnings were 35 percent higher for males than for females.

For full-time year-round workers 25 years old and over, changes in median annual earnings in constant 2009 dollars from 1995 to 2009 varied according to highest level of educational attainment and sex. Among workers with the same level of educational attainment, net percentage changes in earnings tended to be more positive for females than for males. For both male and female full-time year-round workers, net percentage changes in earnings were generally more positive for those with higher levels of educational attainment than for those with lower levels of attainment. The median annual earnings in constant 2009 dollars of male workers with a bachelor's degree were not significantly different in 1995

(\$63,720) than in 2009 (\$62,440), the median earnings of male workers who had completed high school decreased 5 percent from 1995 (\$41,540) to 2009 (\$39,480), and the median earnings of male workers who had not completed high school decreased 10 percent from 1995 (\$31,230) to 2009 (\$28,020). Among female full-time year-round workers, the median annual earnings of those with a bachelor's degree increased 4 percent from 1995 (\$45,120) to 2009 (\$46,830), the median earnings of those who had completed high school were not significantly different in 1995 (\$28,810) than in 2009 (\$29,150), and the median earnings of those who had not completed high school decreased 5 percent from 1995 (\$22,280) to 2009 (\$21,230).

Table E. Median annual earnings of full-time year-round workers 25 years old and over, by selected levels of educational attainment and sex: Selected years, 1995 through 2009
[In constant 2009 dollars]

Sex and year	Some high school, no completion	High school completion	Bachelor's degree
Males			
1995.....	\$31,230	\$41,540	\$63,720
2000.....	31,260	42,740	70,180
2005.....	29,870	39,880	65,930
2009.....	28,020	39,480	62,440
Females			
1995.....	22,280	28,810	45,120
2000.....	22,320	31,110	50,350
2005.....	22,110	28,880	46,330
2009.....	21,230	29,150	46,830

‡Reporting standards not met.

¹Excludes persons enrolled in school.

NOTE: The unemployment rate is the percentage of individuals in the civilian labor force who are not working and who made specific efforts to find employment sometime during the prior 4 weeks. The labor force includes both employed and unemployed per-

sons. Race categories exclude persons of Hispanic ethnicity. Totals include racial/ethnic groups not separately shown. Standard errors appear in parentheses.

SOURCE: U.S. Department of Labor, Bureau of Labor Statistics, Office of Employment and Unemployment Statistics, unpublished 2007, 2008, and 2009 annual average data from the Current Population Survey (CPS). (This table was prepared September 2010.)

¹Prose literacy refers to the knowledge and skills needed to search, comprehend, and use information from continuous texts. Adults at the Below Basic level, rated 0 to 209, range from being nonliterate in English to being able to locate easily identifiable information in short, commonplace prose texts. At the Basic level, rated 210 to 264, adults are able to read and understand information in short, commonplace prose texts. At the Intermediate level, rated 265 to 339, adults are able to read and understand moderately dense, less commonplace prose texts as well as summarize, make simple inferences, determine cause and effect, and recognize the author's purpose. At the Proficient level, rated 340 to 500, adults are able to read lengthy, complex, abstract prose texts as well as synthesize information and make complex inferences.

²Document literacy refers to the knowledge and skills needed to search, comprehend, and use information from noncontinuous texts in various formats. Adults at the Below Basic level, rated 0 to 204, range from being nonliterate in English to being able to locate easily identifiable information and follow instructions in simple documents (e.g., charts or forms). At the Basic level, rated 205 to 249, adults are able to read and understand information in simple documents. At the Intermediate level, rated 250 to 334, adults are able to locate information in dense, complex documents and make simple inferences about the information. At the Proficient level, rated 335 to 500, adults are able to integrate, synthesize, and analyze multiple pieces of information located in complex documents.

³Quantitative literacy refers to the knowledge and skills required to identify and perform computations, either alone or sequentially, using numbers embedded in printed materials. Adults at the Below Basic level, rated 0 to 234, range from being nonliterate in English to being able to locate numbers and use them to perform simple quantitative operations (primarily addition) when the mathematical information is very concrete and familiar. At the Basic level, rated 235 to 289, adults are able to locate easily identifiable quantitative information and use it to solve simple, one-step problems when the arithmetic operation is specified or easily inferred. At the Intermediate level, rated 290 to 349, adults are able to locate less familiar quantitative information and use it to solve problems when the arithmetic operation is not specified or easily inferred. At the Proficient level, rated 350 to 500, adults are able to locate more abstract quantitative information and use it to solve multistep problems when the arithmetic operations are not easily inferred and the problems are more complex.

NOTE: Adults are defined as people age 16 and older living in households or prisons. Adults who could not be interviewed due to language spoken or cognitive or mental disabilities (3 percent in 2003 and 4 percent in 1992) are excluded from this table. Race categories exclude persons of Hispanic ethnicity. Totals include racial/ethnic groups not separately shown. Detail may not sum to totals because of rounding. Standard errors appear in parentheses.

†Not applicable.

!Interpret data with caution.

¹The labor force participation rate is the percentage of persons who are either employed or seeking employment.

²The labor force includes all employed persons plus those seeking employment. The unemployment rate is the percentage of persons in the labor force who are not working and who made specific efforts to find employment sometime during the prior 4 weeks.

³Includes 16- to 24-year-olds who completed high school between October of the previous year and October of the given year. Includes recipients of equivalency credentials as well as diploma recipients.

NOTE: Enrollment data are for October of given year. Data are based on sample surveys of the civilian noninstitutional population. Percentages are only shown when the base is 75,000 or greater. Totals include race categories not separately shown. Race categories exclude persons of Hispanic ethnicity. Detail may not sum to totals because of rounding. Standard errors appear in parentheses. SOURCE: U.S. Department of Commerce, Census Bureau, Current Population Survey (CPS), October 2007, 2008, and 2009. (This table was prepared August 2010.)

†Not applicable.

!Interpret data with caution.

‡Reporting standards not met.

¹Includes disability categories not shown separately.

²Other health impairments include having limited strength, vitality, or alertness that is due to chronic or acute health problems (such as a heart condition, rheumatic fever, asthma, hemophilia, and leukemia) and that adversely affects educational performance.

³Among students who had ever attended the type of institution specified, the percentage who received a diploma, certificate, or license.

⁴Living independently includes living alone, with a spouse or roommate, in a college dormitory, in Job Corps housing, or in military housing as a service member.

⁵Competitively employed refers to those receiving more than minimum wage and working in an environment where the majority of workers are not disabled.

NOTE: Data based on students who had been out of high school up to 6 years in 2007 and up to 8 years in 2009 and had attended special or regular schools in the 1999-2000 or 2000-01 school year. Apparent discrepancies in attendance and graduation percentages between 2007 and 2009 may be due to inconsistent reporting by respondents and smaller numbers of respondents for the 2009 survey wave. Some data have been revised from previously published figures. Standard errors appear in parentheses.

SOURCE: U.S. Department of Education, Institute of Education Sciences, National Center for Special Education Research, National Longitudinal Transition Study-2 (NLTS2), Waves 4 and 5, 2007 and 2009, unpublished tabulations. (This table was prepared July 2010.)

†Not applicable.

¹Includes those who have not finished all requirements for teaching certification or were previously qualified to teach.

²Most educators work 9- to 10-month contracts.

³Includes computer sciences.

⁴Included in social sciences.

⁵Reported salaries of full-time workers under \$2,600 in 1976, \$4,200 in 1981, and \$1,000 in 2001 were excluded from the tabulations. Also, those with salaries over \$500,000 in 2001 were excluded.

NOTE: Data are from sample surveys of recent college graduates. Data exclude bachelor's degree recipients from U.S. Service Academies, deceased graduates, and graduates living at foreign addresses at the time of the survey. Total includes fields not separately shown. Constant dollars based on the Consumer Price Index, prepared by the Bureau of Labor Statistics, U.S. Department of Labor. Notes on methodology are included in Appendix A: Guide to Sources. Standard errors appear in parentheses.
