The National Center for Education Statistics (NCES) is the primary federal entity for collecting, analyzing, and reporting data related to education in the United States and other nations. It fulfills a congressional mandate to collect, collate, analyze, and report full and complete statistics on the condition of education in the United States; conduct and publish reports and specialized analyses of the meaning and significance of such statistics; assist state and local education agencies in improving their statistical systems; and review and report on education activities in foreign countries.

NCES activities are designed to address high-priority education data needs; provide consistent, reliable, complete, and accurate indicators of education status and trends; and report timely, useful, and high-quality data to the U.S. Department of Education, the Congress, the states, and other education policymakers, practitioners, data users, and the general public. Unless specifically noted all information contained herein is in the public domain.

We strive to make our products available in a variety of formats and in language that is appropriate to a variety of audiences. You, as our customer, are the best judge of our success in communicating information effectively. If you have any comments or suggestions about this or any other NCES product or report, we would like to hear from you. Please direct your comments to

NCES, Institute of Education Sciences

Appendix A.

Glossary of Terms

This page left intentionally blank.

Accommodations (testing): In the Education Longitudinal Study of 2002 (ELS:2002), certain accommodations were offered to students with barriers to participation, such as students with disabilities or English-language learners with limited English proficiency. An accommodation is a change in how a test is presented, in how a test is administered, or in how the test taker is allowed to respond. This term generally refers to changes that do not substantially alter what the test measures. The proper use of accommodations does not substantially change academic level or performance criteria. Appropriate accommodations are made to provide equal opportunity to demonstrate knowledge. Examples of test accommodations include allowing extra time, use of a large-print version of a test, or conveying instructions in sign language. Cases in which accommodations were implemented in ELS:2002 are specially flagged (the indicators are BYTXACC and FITXACC).

Adaptive testing: Beyond being “grade-level” adaptive, procedures were followed in ELS:2002 to make the assessments further adaptive by matching test items to student ability. In the ELS:2002 base year, multiple test forms of varying levels of difficulty were assigned based on the examinee’s score on a routing test. Thus, the specific sequence of questions that each student answered was tailored to that student’s ability level. An advantage of adaptive tests is that reliability per unit of testing time is greater than in a nonadaptive test. Adaptive procedures help to minimize floor and ceiling effects (see *Ceiling effect* and *Floor effect*). ELS:2002 adaptive testing relies on Item Response Theory (see *IRT*) assumptions to place students who have taken different test forms on the same vertical score scale. In the first follow-up, each student’s test form was assigned on the basis of base-year test performance.

American Indian or Alaska Native: An American Indian or Alaska Native is a person who has origins in any of the original peoples of North and South America (including Central America) and who maintains tribal affiliation or community attachment.

Asian: An Asian is a person having origins in any of the original peoples of the Far East, Southeast Asia, or the Indian subcontinent, including, for example, Cambodia, China, India, Japan, Korea, Malaysia, Pakistan, the Philippine Islands, Thailand, and Vietnam.

Base weights: See *Design weights*.

Bias: Bias is the difference between the reported value and the true value. Thus, the bias of an estimate is the difference between the expected value of a sample estimate and the corresponding true value for the population. Response bias is the difference between respondent reports and their behavior or characteristics. Nonresponse bias is the difference that occurs when respondents differ as a group from nonrespondents on a characteristic being studied. Sample bias is the unequal selection or the omission of members of the population, without appropriate weighting. Relatedly, undercoverage bias arises because some portion of the potential sampling frame is missed or excluded, or there are duplicate units. For example, if the school list from which a school sample is drawn is incomplete or inaccurate (owing, for example, to the opening

of new schools subsequent to the time the list was drawn up), school undercoverage may occur. (See also *Nonresponse bias* and *Bias analysis*.)

Bias analysis: Nonresponse bias analysis compares the characteristics of respondents and nonrespondents. Both unit nonresponse (school, student) and item nonresponse on questionnaires were subject to bias analyses in ELS:2002. For example, certain key data items were obtained for both responding and nonresponding schools, so that a school nonresponse analysis could be conducted and bias in school-level estimates quantified.

Black or African American: A person having origins in any of the Black racial groups of Africa.

Burden: Formally, burden is the aggregate hours realistically required for data providers to participate in a data collection. Burden also has a subjective or psychological dimension: the degree to which providing information is regarded as onerous may depend on the salience to the respondent of the questions that are being posed and on other factors, such as competing time demands.

Carnegie unit: A factor used to standardize credits in secondary education. This standard measurement represents the completion of a course that meets one period per day (45 to 60 minutes) for 1 academic year.

CAPI: Computer-assisted personal interviewing, in which the questionnaire is loaded into a field interviewer's laptop computer.

CATI: Computer-assisted telephone interviewing.

CCD: Common Core of Data. Data annually collected from all public schools in the United States by *NCES*. Data from the CCD supplied the public school sampling frame for the ELS:2002 base year.

CD-ROM: Compact Disc Read-Only Memory. ELS:2002 data are distributed primarily in an optical laser disc medium, specifically, CD-ROM. A CD-ROM is a computer storage disc in the same physical form as an audio CD; it can store approximately 650 megabytes of digital data.

Ceiling effect: The result of a test having insufficient numbers of the more difficult items. In a longitudinal study, ceiling effects in the follow-up can cause change scores to be artificially constrained for high-ability examinees. The measurement problems related to floor and ceiling effects in combination with regression effects found at the extreme score ranges seriously hamper the accuracy of change measures in longitudinal studies. More information (i.e., smaller error of measurement) is obtained with respect to ability level if high-ability individuals receive relatively harder items (and if low-ability individuals receive proportionately easier items). The matching of item difficulty to a person's ability level yields increased reliability at the extremes of the score distribution, where it is most needed for studies of

longitudinal change. A strategy employed in ELS:2002 to minimize ceiling (and floor) effects is to employ test forms that are “adaptive” to the ability level of the examinee. Multilevel tests—with second stage test assignment that is based on the first stage (routing test) performance work—minimize the possibility that ceiling effects might bias the estimates of the score gains. (See also *Adaptive testing* and *Floor effect*.)

Classical test theory: Classical test theory postulates that a test score can be decomposed into two parts—a true score and an error component; that the error component is random with a mean of zero and is uncorrelated with true scores; and that true scores, observed scores, and error components are linearly related.

Closed-ended: A type of question in which the data provider’s responses are limited to given alternatives (as opposed to an open-ended question). (See also *Open-ended*.)

Clustering: A sample selection method in which small geographical areas such as schools (as is the case in ELS:2002), school districts, counties, or residential blocks are selected as an initial stage, with individuals selected in a subsequent step. (See also *PSU*.)

Cluster size: The number of ELS:2002 sample members attending a particular high school.

Codebook: Documentation of each variable being measured, including variable name, columns occupied by each variable in the data matrix, values used to define each variable, unweighted frequencies, unweighted percents, and weighted valid percents. (See *ECB*.)

Coefficient of variation: The ratio of the *standard deviation* of an estimate to the value of the estimate.

Cognitive test battery: One of the two parts of the student survey (the second part being the student questionnaire). Two achievement areas (mathematics and reading) were measured in the base year. Mathematics achievement was measured again in the first follow-up.

Cohort: A group of individuals who have a statistical factor in common—for example, year of birth, grade in school, or year of high school graduation. ELS:2002 is a sophomore-grade cohort based on the spring term of the 2001–02 school year. It also contains, however, a nationally representative sample of high school seniors in the spring term of the 2003–04 school year (see *Freshening*). In contrast, the Program for International Student Assessment (*PISA*) is an age cohort, based on students who were 15.25 years of age.

Composite variable: A composite variable is one that is either constructed through the combination of two or more variables (socioeconomic status, for example, combines mother’s education, father’s education, mother’s occupation, father’s occupation, and family income) or calculated through the application of a mathematical function or transformation to a variable (e.g., conversion of raw test scores to percentile ranks). Also called a derived variable, created variable, or constructed variable.

Concordance: Concordance is a weaker form of test linkage than *equating* in that the link is based on population distributions rather than the equivalence of interchangeable scores. Implementation in ELS:2002 of PISA scale scores in reading and math and of *NAEP* math scores was through a concordance using (primarily) an equipercentile transformation or linkage. (See also *Equating* and *Equated test score*.)

Confidence interval: A sample-based estimate expressed as an interval or range of values within which the true population value is expected to be located (with a specified degree of confidence).

Confidentiality protections: *NCES* is required by law to protect individually identifiable data from unauthorized disclosure. To this end, the ELS:2002 data have been subject to a disclosure risk analysis to determine which records require masking to produce the public-use data file from the restricted-use data file. Disclosure coarsening techniques (such as recoding of continuous variables into categorical, top and bottom coding, and so on) and data perturbation techniques (e.g., data swapping) have been used to provide disclosure protection to the ELS:2002 data. (See also *Data swapping* and *Disclosure risk analysis*.)

Consent, active (explicit): One variety of informed consent is called active or explicit consent. Typically, in active consent, a signed agreement to participate in a study must be obtained. In ELS:2002, permission of parents was required before students could be surveyed. Some schools required active parental consent (i.e., that a signed permission form be obtained).

Consent, passive (implied): Another variety of informed consent is called passive or implied consent. In passive consent, a permission form is sent to the relevant party (in ELS:2002, normally the parent or guardian of the sampled student), who has the opportunity to return the form to indicate denial of permission. If the form is not returned, it is assumed that the individual has no objection to survey participation. In ELS:2002, most schools allowed passive parental consent for their child's participation in the study.

Constructed response item: In the ELS:2002 assessment battery in the base year, a non-multiple-choice item that required some type of written response.

Contextual data: In ELS:2002, the primary unit of analysis is the student, and information from the other study components, referred to as contextual data, should be viewed as extensions of the student data. For example, observations made in school administrator, teacher, librarian, and parent reports on the student's school learning environment or home situation would be considered contextual data.

Course offerings file: An ELS:2002 restricted-use data file providing a comprehensive list of the courses offered by schools participating in the base year of the study. A *CSSC* (Classification of Secondary School Courses) code is associated with each course title.

Criterion-referenced: A criterion-referenced test allows its user to measure how well a student or groups of students have learned a specific body of knowledge and skills—it tests what

they can do and what they know, and at least in theory, all examinees could obtain a perfect score. The ELS:2002 IRT-estimated number-correct scores are examples of criterion-referenced measures of status at a point in time. The criterion is the knowledge and set of skills defined by the assessment framework and represented by the assessment item pool. In contrast, the purpose of norm-referenced tests is to rank or compare students. (See *Norm-referenced*.)

Cross-cohort (or intercohort) analysis: The ELS:2002 base-year and first follow-up surveys contained many data elements that were comparable to items from prior studies. There are also some comparison points between ELS:2002 second follow-up and the prior secondary longitudinal studies, and comparison is possible between the ELS:2002 third follow-up in 2012 and the *NELS:88* fourth follow-up in 2000.

Essentially, three kinds of intercohort comparison are possible. First, cohorts can be compared on an *intergenerational or cross-cohort time-lag basis*. Both cross-sectional and longitudinal time-lag comparisons may be made. An example of a cross-sectional time-lag comparison would be looking at the status of *HS&B* (1980), *NELS:88* (1990), and ELS:2002 (2002) sophomores to see how the situation of sophomores has changed over time. An example of longitudinal time-lag comparison would be an examination of the magnitude and correlates of achievement gain of *HS&B*, *NELS:88*, and ELS:2002 sophomores over the last 2 years of high school. Second, *fixed-time comparisons* are also possible, in which groups within each study are compared at different ages but the same point in time (e.g., *NLS:72*, *HS&B* senior, and *HS&B* sophomore cohorts all could be looked at in 1986, some 14, 6, and 4 years after each respective cohort graduated from high school). Such a perspective would permit one to compare, for example, employment rates for 22-, 24-, and 32-year-old high school graduates. Finally, longitudinal comparative analysis of the cohorts can be performed by modeling the history of the grade cohorts.

Cross-sectional analysis: A cross-sectional design represents events and statuses at a single point in time. For example, a cross-sectional survey may measure the cumulative educational attainment (achievements, attitudes, statuses) of students at a particular stage of schooling, such as 10th or 12th grade. In contrast, a longitudinal survey (or repeated measurement of the same sample units) measures the change or growth in educational attainment that occurs over a particular period of schooling. The longitudinal design of ELS:2002 generates two representative cross-sections (high school sophomores in 2002 and, through sample freshening, seniors in 2004). It also permits analysis of individual-level change over time through longitudinal analysis and of group-level and intercohort change through the cross-sectional comparisons to past studies of similarly defined grade cohorts. (See also *Cross-cohort analysis* and *Longitudinal or panel survey*.)

CSSC: Classification of Secondary School Courses. A coding system, used since *HS&B* and updated many times, employed for the purpose of standardizing transcripts. The CSSC is a modification of the Classification of Instructional Program (CIP) used for classifying college

courses. Each CSSC course code contains six digits. The first two digits identify the main program area; the second two digits represent a subcategory of courses within the main program area; and the final two digits define the specific course. For example, for CSSC code 400522, the first two digits (40) define physical sciences, the middle two digits (05) define the chemistry subcategory, and the final two digits (22) define the course Advanced Chemistry.

Data element: The most basic unit of information. In data processing, it is the fundamental data structure. It is defined by its size (in characters) and data type (e.g., alphanumeric, numeric only, true/false, date) and may include a specific set of values or range of values.

Data swapping: Data swapping is defined in the *NCES Statistical Standards* (Seastrom 2003) as a perturbation disclosure limitation technique that results in a confidentiality edit. An example of data swapping would be to assume a data file has two potential individual identifying variables, for example, sex and age. If a sample case needs disclosure protection, it is paired with another sampled case so that each element of the pair has the same age, but different sexes. The data on these two records are then swapped. After the swapping, anyone thinking they have identified either one of the paired cases gets the data of the other case, so they have not made an accurate match and the data have been protected. (See also *Confidentiality protections*.)

Design effect: A measure of sample efficiency. The design effect (DEFF) is the variance of an estimate divided by the variance of the estimate that would have occurred if a sample of the same size had been selected using simple random sampling. Sometimes it is more useful to work with standard errors than with variances. The root design effect (DEFT) expresses the relation between the actual standard error of an estimate and the standard error of the corresponding estimates from a simple random sample. (See also *Effective sample size*.)

Design weights: Design weights compensate for unequal probabilities of selection. More specifically, the design weight is the inverse of the probability of selection. Design weights are also called raw weights, base weights, unadjusted weights, or sampling weights. Design weights may be contrasted to adjusted weights (adjusted to compensate for nonresponse, and also called final weights or analysis weights). Roughly, the design weight is calculated as the inverse of the probability of selection, taking into account all stages of the sample selection process. More precisely, design weights are the inverses of the expected frequencies with which population units appear in conceptually repeated samples selected using the sampling design developed for the study. Unlike the final weights, design weights are generated for all sample members, respondents and nonrespondents alike. Design weights do not appear on the ELS:2002 public-use files. (See also *Final weights* and *Sampling weights*.)

DIF: Differential Item Functioning. DIF exists when examinees of equal ability differ on an item solely because of their membership in a particular group (e.g., if an item favors males over females, or one racial or ethnic group over another, and cannot be explained by relevant

factors such as differential coursetaking). DIF for ELS:2002 items was examined in the base-year and first follow-up field tests. Items with DIF problems were revised or deleted.

Disability: A disability is a physical or mental impairment that substantially limits one or more of the major life activities (Title 42 U.S.C. Section 12102).

Disclosure risk analysis: Investigation of study data to evaluate and minimize the risk of identification of individual sample units to preserve the confidentiality of the data. ELS:2002 data have been subjected to a disclosure risk analysis to protect confidential information about individual respondents (see *Public-use data file*). For a more detailed account of disclosure risk analysis, and of means of altering data (including masking, data perturbation, and data swapping) to prevent disclosure, see the *NCES Statistical Standards* (Seastrom 2003).

Domain: In assessment a domain refers to a defined universe of knowledge, skills, abilities, attitudes, interests, or other human characteristics, or the full array of manifestations of the particular subject matter being measured. A domain in the context of sample design refers to an analysis group within the target population, such as (in ELS:2002) sophomore cohort dropouts, graduating seniors, males, females, Asians, and so on, for which certain precision requirements must be met to support analysis.

Dropouts: In the ELS:2002 first follow-up, following the precedent of *HS&B* and *NELS:88*, a dropout was defined as a sophomore cohort member who, during spring term 2004, had not been in school for 4 consecutive weeks or more and was not absent because of accident or illness. However, additional dropout episodes were also collected (out-of-school students were asked about earlier dropout episodes, and provided dates (month, year) for dropout episodes. High school attainment has been monitored across survey waves, including the third follow-up interview, and additional information about dropping out can be found on the transcript file. (See also *NCSQ*.)

ECB: Electronic codebook. Electronic codebooks are menu-driven systems that allow users to perform functions such as the following: (a) search a list of database variables based on key words or variable names/labels, (b) display unweighted percentages for each variable in the database, (c) display question text for each variable in the database, (d) select or tag variables for subsequent analysis, (e) generate program code/command statements for subsequently constructing a system file of the selected variables, and (f) generate a codebook of the selected variables.

Effective sample size: Effective sample size may be defined as the ratio of the raw sample size divided by the design effect. (For example, the sampling variance of a mean standard score is equal to the reciprocal of the effective sample size, not the reciprocal of the raw sample size.) In essence, then, effective sample size is the sample size under a simple random sample design that is equivalent to the actual sample under the complex sample design, wherein the actual sample size is determined by multiplying the effective sample size by the anticipated design effect. (See also *Design effect*.)

EGQ: Early graduate questionnaire. This first follow-up questionnaire was administered to individuals who had graduated or received high school equivalency certification (e.g., the *GED test*) prior to March 15, 2004.

Equated test score: Test equating takes place in two distinct contexts in ELS:2002. One context is vertical equating of forms for use in successive grades, such that the achievement growth of individual ELS:2002 sample members over time can be accurately measured. Another context is cross-sectional equating and linking, as to other tests (e.g., placing ELS:2002 sophomores and *HS&B* or *NELS:88* sophomores on an equivalent scale).

Equating: Equating of two tests is established when examinees of every ability level and from every population group can be indifferent about which of two tests they take. Not only should they have the same expected mean score on each test, but they should also have the same errors of measurement. In contrast, test linkage results from placing two or more tests on the same scale, so that scores can be used interchangeably. In ELS:2002, there is both vertical equating (the scale spans grades 10 and 12) and lateral equating to the tests of *NELS:88* (and in sophomore math, *HS&B*). This equating was achieved through *IRT* methods such as anchor (common item) equating. (See also *Concordance* and *Equated test score*.)

Expanded sample: Although no sophomores were excluded from ELS:2002, those who could not validly be assessed or could not validly complete the student questionnaire (e.g., students with a severe disability or limitation in their knowledge of the English language) were not eligible for these components. Contextual data (parent, teacher, school administrator) reports were collected for this group. In 2004–05, their transcripts were collected. The base-year expanded sample comprises all ELS:2002 sophomores, that is, both those who were eligible to complete the student questionnaire and test and those who were not. The first follow-up expanded sample also includes freshened cases. Some students who were eligible for questionnaire completion in 2002 suffered an impairment that led to their reclassification as ineligible in 2004. With greater frequency, some 2002 sophomores who were not capable of questionnaire completion became eligible in 2004, as their status changed. The expanded sample comprises all sample members regardless of eligibility for questionnaire completion. (See also *Questionnaire-incapable students*.)

Facilities checklist: Completed by the RTI survey administrator in the base year of the study, the facilities checklist is designed to extend the information available about the school by providing data on the school buildings and grounds that will help researchers understand the adequacy and appearance of the school's physical plant, its safety and security features, and its role as a constituent of the school's general environment.

FAFSA: Free Application for Federal Student Aid. Generally students interested in financial aid for postsecondary education must complete this form, data from which (collected in the second, and third, follow-ups) has been included on the ELS:2002 second and third follow-up restricted-use *ECB*.

File: Refers to a data file containing a set of related computerized records.

Final weights: Final weights are sometimes called nonresponse-adjusted weights, adjusted weights, or analysis weights. Building on the design (raw) weight, they compensate for nonresponse. (See *Design weights*.)

Floor effect: The result of a cognitive test being too difficult for a large number of the examinees, causing the low-ability examinees to receive chance scores on the first testing, and on subsequent testings if the test remains too difficult. Floor effects result in an inability to discriminate among low-ability individuals at time one or time two and, thus, no reliable discrimination among examinees with respect to amounts of change. A possible solution, used in ELS:2002, is to develop test forms that are “adaptive” to the ability level of the examinee, which tends to minimize the possibility of floor effects biasing the estimates of the score gains. (See also *Adaptive testing* and *Ceiling effect*.)

Form: a questionnaire “form” is a screen (as in a web survey). A form may contain one question with one item/variable or it may contain one question with multiple items/variables. Some forms are text only so they contain no items/variables (e.g., section introductions). In rare instances, a form may have more than one question on it (e.g., occupation title and duties).

Frame: A list of all the sampling units that represent the population. The Common Core of Data (CCD) and Private School Survey (PSS) were drawn upon for the ELS:2002 school frame. For an implicit list of the nation’s high school sophomores as of spring term 2002, school rosters from participating schools listing their sophomore class were relied on.

Frame population: The set of elements (e.g., schools) that can be enumerated prior to the selection of a survey sample.

Freshening: A freshened sample includes cases from the longitudinal sample of a dataset, plus new cases added to produce cross-sectional estimates of the population at the time of a subsequent wave of a longitudinal data collection. In the ELS:2002 first follow-up, freshening was the means by which high school seniors were added who had not been in the 10th grade in the United States 2 years before. A similar freshening procedure was implemented in NELS:88. (See also *Half-open interval*.)

GED recipient: A person who has obtained certification of high school equivalency by meeting state requirements and passing an approved exam, which is intended to provide an appraisal of the person’s achievement or performance in the broad subject matter areas usually required for high school graduation. (See also *GED test*.)

GED test: General Educational Development test. A test administered by the American Council on Education as the basis for awarding a high school equivalent certification. GED test results are part of the administrative records component of ELS:2002.

Half-open interval: A technique used to increase coverage. It is usually applied to a new list that includes cases that were covered in a previous frame, as well as new in-scope units not

included in the previous frame. In this technique, new in-scope units between unit A on the previous frame up to, but not including, unit B (the next unit on the previous frame) are associated with unit A. These new units have the same selection probability as do unit As. This process is repeated for every unit on the previous frame. The new units associated with the actual sample cases are now included in the sample with their respective selection probabilities (freshening). Student sample freshening in the *NELS:88* first and second follow-ups, and the freshening conducted in the *ELS:2002* first follow-up, relied on such a procedure. The half-open interval procedure was also used for *ELS:2002* base-year sample updating prior to survey day. (See also *Freshening* and *Sample updating or refreshing*.)

Hispanic or Latino: A person of Cuban, Mexican, Puerto Rican, South or Central American, or other Spanish culture or origin, regardless of race. The term “Spanish origin” can be used in addition to “Hispanic or Latino.”

HS&B: High School and Beyond. The second in the series of longitudinal high school cohort studies sponsored by *NCES*. The HS&B base-year study surveyed sophomore and senior students in 1980. The sophomore cohort was last interviewed in 1992 and their postsecondary transcripts collected in 1993. The senior cohort was last interviewed in 1986.

HSLs:09: High School Longitudinal Study of 2009. The fifth in the series of longitudinal high school cohort studies sponsored by *NCES*. The HSLs:09 base-year study surveyed fall-term ninth-graders in 2009. A first follow-up was conducted spring term 2012, with a 2013 update and a high school transcript study. The next interview is scheduled for 2016. There was no freshening in HSLs:09, so there is only a ninth-grade cohort. Because data collection points do not align with those of the prior studies, specific cross-cohort comparisons cannot be made to the prior studies.

HSQ: Homeschool student questionnaire. In the first follow-up, this questionnaire was administered to sophomore cohort members who were in a homeschool situation as of the spring term of the 2003–04 school year.

IEP: Individualized Education Program. A written statement or plan for each individual with a disability that is developed, reviewed, and revised in accordance with Title 42 U.S.C. Section 1414(d).

Imputation: Imputation involves substituting values for missing or inconsistent data in a dataset. Prediction of a missing value is typically based on a procedure that uses a mathematical model in combination with available information. Imputation is used to reduce nonresponse bias in survey estimates, simplify analyses, and improve the consistency of results across analyses. Imputations should also preserve multivariate distributions. Missing data for key items in *ELS:2002* have been imputed.

Individually identifiable data: Data from any record, response form, completed survey, or aggregation about an individual or individuals from which information about particular individuals may be revealed.

Instrument: An evaluative device that includes tests, scales, and inventories to measure a domain using standardized procedures.

IRT: Item Response Theory. A method of estimating achievement level by considering the pattern of right, wrong, and omitted responses on all items administered to an individual student. IRT postulates that the probability of correct responses to a set of test questions is a function of true proficiency and of one or more parameters specific to each test question. Rather than merely counting right and wrong responses, the IRT procedure also considers characteristics of each of the test items, such as their difficulty and the likelihood that they could be guessed correctly by low-ability individuals. IRT scores are less likely than simple number-correct or formula scores to be distorted by correct guesses on difficult items if a student's response vector also contains incorrect answers to easier questions. Another attribute of IRT that makes it useful for ELS:2002 is the calibration of item parameters for all items administered to all students. This makes it possible to obtain scores on the same scale for students who took harder or easier forms of the test. IRT also was used to vertically scale across ELS:2002 rounds, that is, between the two grade levels (10th grade in 2002, 12th grade in 2004). (See, in contrast, *Classical test theory*.)

Item nonresponse: The amount of missing information when a valid response to an item or variable was expected. (See also *Bias analysis* and *Unit nonresponse*.)

LEP: Limited English proficient. Increasingly, the term "English Language Learners" (ELLs) is in use for this population. This concept was developed to assist in identifying those language-minority students (individuals from non-English-language backgrounds) who need language assistance services, in their own language or in English, in the schools. (See also *NEP* and *LM*.) An LEP student is one who meets one or more of the following conditions:

- a. the student was born outside of the United States or the student's native language is not English;
- b. the student comes from an environment in which a language other than English is dominant; or
- c. the student is an American Indian or Alaska Native and comes from an environment in which a language other than English has had a significant impact on his or her level of English language proficiency,

and who has such difficulty speaking, reading, writing, or understanding the English language as to deny him or her the opportunity to learn successfully in English-only classrooms.

Library media center questionnaire: This base-year instrument supplies information about library/media center organization and staffing, technology resources, extent of library and

media holdings, student access to and use of the library/media center, and its role in supporting the school's curriculum.

LM: Language Minority. A non-, limited-, or fully English-proficient student in whose home a non-English language is typically spoken.

Longitudinal or panel survey: In a longitudinal design, similar measurements—of the same sample of individuals, institutions, households, or of some other defined unit—are taken at multiple time points. ELS:2002 employs a longitudinal design that follows the same individuals over time and permits the analysis of individual-level change. (See also *Cross-sectional analysis*.)

Machine editing: Also called forced data cleaning or logical editing. Uses computerized instructions (including logical or deductive imputation) in the data cleaning program that ensure common sense consistency within and across the responses from a data provider.

Mahalanobis distance: The distance between a case and some group mean where the mean is defined by a set of independent variables. In the case of ELS:2002, the Mahalanobis distance was used to identify nonresponding cases “furthest” from the set of respondents at certain points during the data collection period.

Microdata (microrecords): Observations of individual sample members, such as those contained on the ELS:2002 data files.

Mode effects: Mode of administration effects can sometimes be a problem for surveys. The ELS:2002 second and third follow-up surveys, for example, were administered in three modes: self-administration via the web, interviewer administration by telephone, and in-person interviewer administration. The concern is that sometimes (and in particular when social desirability of questionnaire responses is a salient consideration) respondents may respond differently to the different stimuli provided by differing administration modes. Every effort was made in ELS:2002 to adapt questions so that differences between modes would be minimized; nor were there highly sensitive questions of the sort most likely to be affected by mode.

NAEP: The National Assessment of Educational Progress. NAEP is a cross-sectional assessment program that measures achievement at the group level for students in 4th, 8th, and 12th grades and provides a time series for measuring trends in academic progress of 9-, 13-, and 17-year-olds. ELS:2002 tests differ from but complement those of NAEP by providing a basis for measuring individual-level achievement growth between 10th and 12th grades in mathematics and relating cognitive gains in this subject to the individual, school, and family factors and processes that are measured in the various ELS:2002 questionnaires and school records (transcript) studies. The ELS:2002 scale score (IRT-estimated number correct) for mathematics in 2004 has been put on the NAEP scale (based on the 2005 12th-grade NAEP mathematics assessment); this concordant score has now been added to the database.

Native Hawaiian or Other Pacific Islander: Any person having origins in any of the original peoples of Hawaii, Guam, Samoa, or other Pacific Islands.

NCES: The National Center for Education Statistics, Institute of Education Sciences, U.S. Department of Education. This governmental agency is the sponsor of ELS:2002 and is also the sponsoring agency for (among other studies) the National Assessment of Educational Progress (*NAEP*), the U.S. component of the Program for International Student Assessment (*PISA*), the High School Longitudinal Study of 2009 (*HSLs:09*), the National Education Longitudinal Study of 1988 (*NELS:88*), the High School and Beyond (*HS&B*) longitudinal study, and the National Longitudinal Study of the High School Class of 1972 (*NLS:72*).

NCOA: National Change of Address directory. NCOA was used for batch tracing and locating in ELS:2002.

NCSQ: Not currently in school questionnaire. This first follow-up questionnaire was administered to sophomore cohort dropouts. It includes questions both on present circumstances and retrospective items on schooling experience and school disengagement behaviors. (See also *Dropouts*.)

NELS:88: The National Education Longitudinal Study of 1988. Third in the series of longitudinal high school cohort studies sponsored by *NCES*. The study represents three cohorts: the eighth-grade class of 1988, the sophomore class of 1990, and the senior class of 1992. The study collected questionnaire and test data in 1988, 1990, and 1992 on students' school experiences, as well as background information from school administrators, teachers, parents (in the base year and second follow-up only), and school records. Data on postsecondary and out-of-school experiences were collected in interviews conducted in 1994 and 2000 and through a postsecondary education transcripts study in 2000–01.

NEP: No English proficiency. A student who does not speak English. (See also *LEP*.)

New participant supplement (NPS): Base-year nonrespondents who responded in the first follow-up but were not enrolled in the base-year schools (e.g., transfers, dropouts, early graduates) completed this supplement in addition to an appropriate questionnaire. The supplement consists wholly of items from the base year, so that the standard classification variables could be captured for all sample members.

NLS:72: The National Longitudinal Study of the High School Class of 1972. This project was the first in the series of longitudinal high school cohort studies sponsored by *NCES*. The final round of data collection took place in 1986.

Noncoverage: Units of the target population that are missing from the frame population. Includes the problems of incomplete frames and missing units.

Nonresponse: See *Bias analysis*, *Item nonresponse*, *Nonresponse bias*, and *Unit nonresponse*.

Nonresponse bias: Nonresponse bias may occur as a result of not obtaining 100 percent response from the selected cases. More specifically, nonresponse bias occurs when the expected observed value deviates from the population parameter. The potential magnitude of nonresponse bias is estimated as the product of the nonresponse rate and the difference in values of a characteristic between respondents and nonrespondents. (See also *Bias* and *Bias analysis*.)

Nonsampling error: An error in sample estimates that cannot be attributed to sampling fluctuations. Such errors may arise from many sources, including imperfect implementation of sampling procedures, differential unit or item nonresponse across subgroups, bias in estimation, or errors in observation and recording.

Norm-referenced: A norm-referenced test is used to rank or compare students or groups of students relative to each other. It is interpreted based on comparison of an examinee's performance relative to the performance of others in a specified reference population, or by a comparison of a group to other groups. ELS:2002 provides both norm-referenced (normative) and criterion-referenced scores. (See also *Criterion-referenced*.)

NPSQ: New participant student questionnaire. This first follow-up questionnaire was administered to students in the base-year schools 2 years later. The NPSQ elicited responses from two distinct groups: sophomore cohort members who had been base-year nonparticipants, and students brought in through sample freshening. (A small number of students whose eligibility status had changed between rounds completed an NPSQ.) The questionnaire comprised both base-year items (the standard classification variables) and first follow-up items pertaining to students' current school experience.

NSLDS: The National Student Loan Data System. Data from the NSLDS have been included on the ELS:2002 second follow-up and third follow-up restricted use file.

OMB: The Office of Management and Budget, U.S. Executive Branch. OMB is a federal agency with the responsibility for reviewing all studies funded by executive branch agencies. OMB reviewed, commented on, and approved the ELS:2002 questionnaires, as indicated by their approval number and expiration date in the top right corner of the questionnaire covers.

O*NET: Occupational Information Network. One of the industry and occupation coding schemes used on ELS:2002. The O*NET database was developed for the U.S. Department of Labor and represents an extensive set of worker attributes and job characteristics. O*NET provides a nested coding scheme; 23 general-level categories expand to 96 midlevel categories, which expand to 883 specific-level categories.

Open-ended: A type of question in which the data provider's responses are not limited to given alternatives.

Optical scanning: A system of recording responses that transfers responses into machine-readable data through optical mark reading. Data from base-year and first follow-up in-

school survey sessions (and indeed all non-CATI operations across components) were optically scanned.

Out-of-scope: Permanently out-of-scope individuals are no longer associated with the target population. Permanently out-of-scope cases include a sample member determined to be a sampling error (not truly eligible, e.g., not a spring 2002 sophomore or not a freshening-eligible spring 2004 senior), a sample member who has died, or sample members who have been subsampled out of the study by probabilistic methods and their weights redistributed. However, some cases are only temporarily out of scope: these individuals continue to be associated with the target population, but were excluded for a given round. If a sample member was unavailable for the field period (for example, incarcerated, or on a military assignment outside the country and unreachable, or hospitalized), that individual would be classified as out of scope for the current round only; the sample member's status would be investigated again in the next round and an interview pursued at that time if at all possible. Cases that are temporarily or permanently out of scope do not count against the ELS:2002 response rate but may be considered in weighting. Study withdrawals are not re-fielded though they remain eligible.

Oversampling: Deliberately sampling a portion of the population at a higher rate than the remainder of the population. For example, in ELS:2002, private schools have been oversampled. Within schools, Asians have been oversampled.

Panel maintenance: Panel maintenance is an address follow-up with sample members between data collection rounds (thus maximizing the number of sample members who can be readily located).

Paradata: Data which describe the process of survey data collection. Numerous elements of paradata have been identified and include measures like contact history and interviewer interactions. Paradata are often used in responsive design (See also *Responsive design*); in ELS:2002, various paradata, survey and sampling frame variables were incorporated into a distance function calculation (See *Mahalanobis distance*) thus providing an opportunity to target the cases most unlike respondents and therefore, if completed, most likely to reduce nonresponse bias.

Parent/guardian questionnaire: The ELS:2002 base-year parent component sought to collect information from parents of all base-year student sample members. The parent or guardian who knew most about his or her child's educational experience was asked to complete the questionnaire.

PETS: Postsecondary education transcript study. ELS:2002 will collect postsecondary education transcripts for all sample members who reported any postsecondary educational enrollment. The ELS:2002 PETS takes place in a 2013–14 time frame. PETS collections have been conducted for all NCES secondary longitudinal studies cohorts, starting with NLS:72, and offer a point of cross-cohort comparison to ELS:2002. Data files created for the PETS include detailed information about the types of degree programs, periods of enrollment, majors or fields

of study for instructional programs, specific courses taken, grades and credits attained, and credentials earned.

PISA: The Program for International Student Assessment. PISA assesses an age cohort (15-year-olds) in reading, mathematics, and science and was last conducted in 2012. In 2000, the primary focus of the assessment was reading, and in 2003 mathematics. The United States and 31 other nations participated, under the aegis of the Organization for Economic Cooperation and Development. A crosswalk (or *concordance*) has been developed between the ELS:2002 reading test and the PISA reading test, so that the PISA scale can be implemented in ELS:2002. A similar scale linkage (again a concordance) was effected between the ELS:2002 mathematics test (2002) and the PISA math test (2003).

Population: All individuals in the group to which conclusions from a data collection activity are to be applied. Weighted results of ELS:2002 data provide estimates for populations and subgroups.

Population variance: A measure of dispersion defined as the average of the squared deviations between the observed values of the elements of a population or sample and the population mean of those values.

Postsecondary education: The provision of formal instructional programs with a curriculum designed primarily for students who have completed the requirements for a high school diploma or equivalent. This includes programs of an academic, vocational, and continuing professional education purpose and excludes vocational and adult basic education programs.

Poststratification adjustment: A weight adjustment that forces survey estimates to match independent population totals within selected poststrata (adjustment cells). More specifically, poststratification is an estimation method that adjusts the sampling weights after the sample has been selected so that certain sample totals (for example, the proportion of Asians) match counterpart population totals.

Precision: The difference between a sample-based estimate and its expected value. Precision is measured in terms of the sampling error (or standard error) of an estimate.

Probability sample: A sample selected by a method such that each unit has a fixed and determined probability of selection—that is, each population unit has a known, nonzero chance of being included.

Proficiency score: Proficiency scores (or *criterion-referenced* mastery scores) are based on clusters of items within each test that are of similar content and difficulty. The probability of proficiency is a continuous score that can be reported as a mean or a population percentage. Although the IRT-estimated number-correct scores report gains in the aggregate, the proficiency scores report gain disaggregated, by distinct levels of proficiency related to specific knowledge and skills.

PSS: Private School Survey. An *NCES* universe survey encompassing the nation's private schools. PSS was the private school sampling frame for the ELS:2002 base year.

PSU: Primary sampling unit. Unit chosen at the first stage of a multistage (cluster) sample. In ELS:2002, the PSU is the school; in other studies, geographical units such as a county or metropolitan statistical area (MSA) may serve as the PSU.

Public-use data file: A public-use file that includes a subset of data that have been coded, aggregated, or otherwise altered to mask individually identifiable information; it thus is available to all external users. Unique identifiers, geographic detail, and other variables that cannot be suitably altered are not included in public-use data files. Public-use edits are based on an assumption that external users have access to both individual respondent records and secondary data sources that include data that could be used to identify respondents. For this reason, the editing process is relatively extensive. When determining an appropriate masking process, the public-use edit takes into account and guards against matches on common variables from all known files that could be matched to the public-use file. The analysis used to determine which records require masking is called a *disclosure risk analysis*.

Questionnaire-incapable students: It was determined that some ELS:2002 students could not be validly assessed or surveyed, owing to severe physical or mental disabilities or to language barriers. These students were classified as “questionnaire-incapable” but they were not deemed ineligible for the study. They were included in the study; their status was reviewed in the subsequent round or rounds (at which time a few classifications changed); and while assessment and questionnaire data could not be collected from them, school, teacher, and parent contextual data were gathered for this group, and high school transcripts collected for them as well. In some ELS:2002 documentation, this group is called “questionnaire ineligible.” (See also *Expanded Sample*.)

Range check: A determination of whether responses fall within a predetermined set of acceptable values.

Record format: The layout of the information contained in a data record (includes the name, type, and size of each field in the record).

Records: A logical grouping of data elements within a file upon which a computer program acts.

Refreshed student: See *Sample updating or refreshing*.

Relative bias: Relative bias is the bias of the estimate divided by the estimate. It provides an indication of the order of magnitude of the bias with respect to the estimate.

Reliability: The consistency in results of a test or measurement including the tendency of the test or measurement to produce the same results when applied twice to some entity or attribute believed not to have changed in the interval between measurements.

Response rate: unconditional *unit response* rates are calculated as the ratio of the weighted number of completed instruments to the weighted number of eligible cases, using the sample base weight (the inverse of the probability of selection). In multistage samples, such as the base year of ELS:2002, overall response is the product of both stages (although for many purposes, the stages [school and student] are reported separately, especially, as in ELS:2002, if the first-stage analysis reveals little bias). The subsequent follow-up response rates that are reported in this document are conditional response rates, that is, they are conditioned on the case having been fielded. The response rate is weighted, using the base weight. A conditional response rate is appropriate for methodological reporting in that the fielded cases supply the best basis for evaluating survey effort and success. Thus, response rates for the follow-ups do not include unfielded eligible (e.g., study withdrawals, hospitalized or incarcerated for the duration of the field period) or unfielded ineligible (deceased, sampling error) cases in the denominator of the rate. The unfielded eligible cases also include double (base-year and first follow-up) nonrespondents, and freshened nonrespondents (who also lack data for both prior rounds).

Item response rates are calculated as the ratio of the number of respondents for whom an in-scope response was obtained to the number of respondents who are asked to answer a given item. Calculation of unit and item response rates can be a complex matter, and additional considerations arise in reporting in follow-up waves of longitudinal studies, for composite (constructed) variables, and for other cases. More detailed information can be found by consulting NCES Standard 1-3 in the NCES 2002 Statistical Standards document (available at <http://nces.ed.gov/statprog/2002/stdtoc.asp>). Bias analyses conducted when response rates are below targets help to assess any possible limitations to the generalizability of survey estimates. (See *Bias analysis*. (See also *Out-of-scope*.)

Responsive design: A concept introduced by Groves and Heeringa (2006) where survey design features that can impact cost and survey statistics are pre-identified prior to data collection. Indicators of these design features are developed and monitored at two or more points during data collection. Ideally, these indicators demonstrate potential error risks and the survey design is adapted to mitigate those emerging risks.

Restricted-use data file: A restricted-use file includes individually identifiable information that is confidential and protected by law. The restricted file is a superset of all variables: The file contains all public-use variables as well as additional data (for example, it may include a categorical version of a variable from the public file, as well as a continuous version of the variable that is not found on the public file). Use of the restricted data requires the researcher to obtain a special license from NCES.

Round: A round of data collection in a longitudinal survey (e.g., the base year and each successive follow-up are rounds of data collection).

RTI International (RTI): A nonprofit university-affiliated research organization with headquarters at Research Triangle Park, North Carolina, that conducted the base-year through

third follow-up studies for *NCES* and is currently gathering data for the ELS:2002 Postsecondary Education Transcript Study. RTI International is a trade name of Research Triangle Institute.

Sample: Subgroup selected, by a probability method, from the entire population, to represent it.

Sample updating or *refreshing*: Because students can transfer into or out of a school after sampling, the base-year student sample in ELS:2002 (as in *HS&B* and *NELS:88*) was updated to remove students who had transferred out and to give sophomores who had transferred in since sampling a chance of selection. The half-open interval procedure was employed for sample updating prior to survey day, using the school 10th-grade enrollment lists.

Sampling error: The part of the difference between a value for an entire population and an estimate of that value derived from a probability sample that results from observing only a sample of values.

Sampling frame: See *Frame* or *Frame population*.

Sampling variance: A measure of dispersion of values of a statistic that would occur if the survey were repeated a large number of times using the same sample design, instrument, and data collection methodology. The square root of the sampling variance is the *standard error*.

Sampling weights: A multiplicative factor equal to the reciprocal of the probability of a respondent being selected for the study, with adjustment for nonresponse. The sum of the weights provides an estimate of the number of persons in the population represented by a respondent in the sample.

SAT: The Scholastic Achievement Test (formerly called the Scholastic Aptitude Test), an examination administered by Educational Testing Service for the College Board and used to predict the facility with which an individual will progress in learning college-level academic subjects. ELS:2002 collected student SAT scores whenever possible.

Scaling: Scaling refers to the process of assigning a scale score based on the pattern of responses. (See also *Equated test score* and *IRT*.)

School administrator questionnaire: This questionnaire was administered in both the base year and, with changes, the first follow-up. The questionnaire sought basic information about school policies, curriculum and program offerings, and student and teacher characteristics.

School climate: The social system and ethos or culture of the school, including the organizational structure of the school and values and expectations within it.

School coordinator: A person designated in each school to act as a contact person between the school and RTI. This person assisted with establishing a survey day in the school and preparing for the survey.

Selection probability: The chance that a particular sampling unit has of being selected in the sample.

SRS: Simple random sampling. SRS uses equal probability sampling with no strata or clusters. The ELS:2002 sample is stratified and clustered. Most statistical analysis software assumes SRS and independently distributed errors. For studies such as ELS:2002, special variance estimation software (such as SUDAAN, WesVar, AM, or Stata) is required to compute the standard error of estimates.

Standard deviation: The most widely used measure of dispersion of a frequency distribution. It is equal to the positive square root of the population variance.

Standard error: The positive square root of the sampling variance. It is a measure of the dispersion of the sampling distribution of a statistic. Standard errors are used to establish confidence intervals for the statistics being analyzed.

Statistical significance: The finding (based on a derived probability, rather than a certitude) that two or more estimates are truly different from one another and not a merely apparent difference reflecting chance variation.

Stratification: The division of a population into parts, or strata. In a stratified sample, the total population is divided into strata or subgroups. Strata are created by partitioning the frame and are generally defined to include relatively homogeneous units within strata. Stratification is used to reduce sampling error. In ELS:2002, the sampling frame was sorted to create strata or subgroups of schools, and schools were selected independently within each stratum. Schools were stratified by superstrata (combinations of school type or sector and geographic region) and substrata (urban, suburban, rural). Further, in the ELS:2002 ECBs, to properly reflect the original design for variance estimation based on Taylor Series linearization, the *sampling strata* were used as the basis for *analysis strata*. The base-year sampling design employed 96 sampling strata and 752 primary sampling units; 361 analysis strata (normally containing two PSUs per stratum) were formed by grouping together the 752 sampling PSUs. The responding schools (PSUs) were sorted within sampling strata in the same order as was originally used for sampling, and then adjacent analysis PSUs were paired to form analysis strata.

Survey administrator: A member of RTI's field staff in charge of conducting in-school data collection sessions (see *Survey day*). The individual in this role was called a team leader in *NELS:88* and a survey representative in *HS&B*.

Survey day: A day chosen by the school during the data collection period when an RTI survey administrator and assistant administered the survey to the school's sample of students. The survey day session lasted about 2 hours in the base year and 90 minutes in the first follow-up. Two make-up days were normally offered for students who missed the survey day.

Target population: The finite set of observable or measurable elements that will be studied, or the conceptual population of analytic units for which data are collected and estimates

are made. In the ELS:2002 base year, the target population was spring-term 2002 sophomores in all regular public and private schools with 10th grades in the 50 states and the District of Columbia.

Teacher questionnaire: In the base year, mathematics and English teachers of ELS:2002 sophomore participants were asked to complete a teacher questionnaire, which collected data on school and teacher characteristics (including teacher qualifications and experience) and evaluations of student performance.

Teacher sample: In the ELS:2002 base year, two teacher reports were sought for each student: one from the student's mathematics teacher and one from the student's English teacher.

Transcript: A student's high school or postsecondary school record. For high school transcripts, such archival data as courses taken, grades, and graduation status are part of the academic transcript record, as well as assessment results such as PSAT, SAT, and ACT scores. Postsecondary transcripts are also collected by ELS:2002.

Transfer student questionnaire (TSQ): This first follow-up questionnaire was administered to students who moved from their base-year school to a new school between spring 2002 and spring 2004. It collected data both on students' school experience and their reason for transferring to a new school.

Trimming: A process by which extreme weights are reduced (trimmed) to diminish the effect of extreme values on estimates and estimated variances.

TRP: Technical Review Panel. A TRP is a specially appointed, independent group of substantive, methodological, and technical experts who offer advice to the study's contractor on issues of study design and content. TRP members are nominated by the contractor and approved by *NCES*. Typically, TRPs are convened several times within the life of a contract.

Unit nonresponse: Failure of a survey unit (e.g., at the institutional level, a school, or at the individual level, a respondent, such as a student or a teacher) to cooperate or complete a survey instrument. *Overall unit nonresponse* reflects a combination of unit nonresponse across two or more levels of data collection, where participation at the second stage of data collection is conditional upon participation in the first stage of data collection. In ELS:2002, overall nonresponse is the product of school-level nonresponse times student nonresponse. *Total nonresponse* reflects a combination of the overall unit nonresponse and item nonresponse. (See also *Item nonresponse* and *Nonresponse bias*.)

Urbanicity (or metropolitan status): The ELS:2002 school sample was stratified by metropolitan status or urbanicity, in accordance with the following three locale codes: (1) Urban: the school is in a large or mid-size central city; (2) Suburban: the school is in a large or small town or is on the urban fringe of a large or mid-size city; and (3) Rural: the school is in a rural area. Locale indicators were taken from the Common Core of Data (*CCD*) for public schools and the Private School Survey (*PSS*) for private schools. More recently (2006) *NCES* changed its

locale code system. The new codes draw on a four-part classification: city, suburban, town, and rural. Cities and suburbs are further divided into small, mid-size and large, and towns and rural areas can be related (via measures of proximity) to urbanized areas (urban fringe, distant, remote). While the older tripartite classification was used in ELS:2002 sampling, analysts who wants to employ the new locale codes with the ELS:2002 base-year and transfer schools can use the ELS:2002 linkages to the CCD and PSS databases to do so.

Validity: The capacity of an item or instrument to measure what it was designed to measure, stated most often in terms of the correlation between scores in the instrument and measures of performance on some external criterion. It is the extent to which a test or set of operations measures what it is supposed to measure. Reliability, on the other hand, refers to consistency of measurement over time. (See *Reliability*.)

Variance: The average of the squared deviations of a random variable from the expected value of the variable. The variance of an estimate is the squared standard error of the estimate. (See also *Population variance* and *Sampling variance*.)

Vocational course: A school course that provides students with the academic and technical knowledge and skills needed for further education or careers requiring less than a bachelor's degree. At the high school level, vocational courses include courses in consumer and homemaking education, general labor market preparation, and specific labor market preparation.

Weighted estimates: Weighted estimates (as in the ELS:2002 codebook) are survey estimates in which the sample data are statistically weighted (multiplied) by factors reflecting the sample design. The general purpose of weighting is to compensate for unequal probabilities of selection into the sample and to adjust for the fact that not all schools or individuals selected into the sample actually participated. The design weights (also known as base weights, and typically equal to the reciprocals of the overall selection probabilities) are multiplied by a nonresponse or poststratification adjustment for a final weight. For example, in ELS:2002, the 752 participating schools in the base year represent a national population of 24,795 schools. Individual schools may "represent" anywhere from a minimum of 1 school to a maximum of 96 schools. To take an ELS:2002 base-year student-level example, 7,613 base-year questionnaire respondents reported themselves to be male, and 7,688 reported themselves to be female. When these cases are multiplied by the nonresponse-adjusted student weights to yield a weighted percentage that reflects the national population of high school sophomores, the estimate for males is 50.5 percent of the 2002 10th-grade cohort, while females are estimated to comprise 49.5 percent of the nation's 2002 10th-graders.

Weighted response rates: Unit response rates are calculated as the ratio of the weighted number of completed interviews to the weighted number of in-scope sample cases. Unit response rates are calculated using the sample base weights (inverse of the probability of selection).

White: A person having origins in any of the original peoples of Europe, the Middle East, or North Africa.

Cross-Cohort Comparisons

This page left intentionally blank.

B.1 Cross-Cohort Comparison Crosswalks

The Education Longitudinal Study of 2002 (ELS:2002) dataset can be used in cross-cohort (intercohort) comparisons with earlier National Center for Education Statistics (NCES) high school cohorts at a comparable point in their educational and labor market experiences.

Because many of the comparability issues have been highlighted or constructively addressed in prior NCES analysis reports (especially in the material that appears in the technical appendixes), citations and supporting full references have been provided for relevant publications. Using ELS:2002 data, the following time series comparisons may be made, employing questionnaire, transcript, or assessment data, separately or in combination:

1. High school seniors as of 12th grade: National Longitudinal Study of the High School Class of 1972 (NLS-72) (1972), High School and Beyond (HS&B) (1980, 1982), National Education Longitudinal Study of 1988 (NELS:88) (1992), and ELS:2002 (2004) (Green, Dugoni, and Ingels 1995, NCES 1995-380; Ingels and Dalton 2008, NCES 2008-320; Dalton et al. 2007, NCES 2007-312).
2. High school sophomores as of 10th grade: HS&B (1980), NELS:88 (1990), and ELS:2002 (2002) (Cahalan et al. 2006, NCES 2006-327; Rasinski et al. 2003, NCES 93-087).
3. High school seniors 2 years out of high school: NLS-72 (1974), HS&B senior cohort (1982), HS&B sophomore cohort (1984), NELS:88 (1994), and ELS:2002 (2006). (For an example of this kind of analysis, see Ingels et al. 2012, NCES 2012-345.)
4. High school sophomores 2 years later: HS&B (1982), NELS:88 (1992), and ELS:2002 (2004). Such comparisons may encompass dropouts (Kaufman, McMillen, and Sweet 1996, NCES 96-893; Dalton, Glennie, and Ingels 2009, NCES 2009-307), or students.
5. High school sophomores 4 years later: HS&B (1984), NELS:88 (1994), and ELS:2002 (2006).

With the delivery of the ELS:2002 third follow-up data, two additional comparisons become possible:

6. High school sophomores 10 years later: NELS:88 (2000) and ELS:2002 (2012).
7. High school seniors 8 years later: NELS:88 (2000) and ELS:2002 (2012).

Instead of the approach outlined above—cohorts compared on an intergenerational or cross-cohort time lag basis—longitudinal comparative analysis of the cohorts can also be performed by modeling the history of the age/grade cohorts. NELS:88/2000 and ELS:2002/12 data, used in conjunction with prior round data, are suitable for this purpose.

Intercohort comparisons will also be possible using the forthcoming ELS:2002 Postsecondary Education Transcript (PETS) with PETS data collected in NLS-72, the HS&B sophomore cohort, and NELS:88. For example, the postsecondary coursetaking of 1980 high school sophomores can be compared with the postsecondary coursetaking of ELS:2002

sophomores. Although the HS&B sophomore postsecondary transcript data involve a greater time span, the analyst can simply abridge the data of the longer series. (Although ELS:2002 postsecondary transcript will be gathered in 2013 and span the period 2004–13, NLS-72 seniors data were collected in 1984 for 1972–84; HS&B sophomore in 1993 for 1982–93, and for NELS:88 sophomore and senior data were collected in 2000 for the span 1992–2000.)

From the point of view of the ELS:2002 third follow-up, with the exception of the postsecondary education transcripts that are currently being collected and processed, there is only a single strictly comparable predecessor study for which cross-cohort time-lag comparison can be implemented: the NELS:88 fourth follow-up in 2000 can be compared with the ELS:2002 third follow-up in 2012. Within this framework, there is potential to compare NELS:88 and ELS:2002 for two distinct cohorts: high school sophomores (1990, 2002) and high school seniors (1992, 2004).

To facilitate choice of suitable variables for intercohort analysis of the 2000 round of NELS:88 and the 2012 round of ELS:2002, a crosswalk of comparable variables is provided in Table H-1. However, data in addition to questionnaire items may also figure in comparisons—administrative records data (such as were collected in the transcript studies), and assessment scores—these sources are separately discussed, in text below. The discussion also enters specific caveats about other factors affecting comparability (for example, changing race definitions, differences in construction of SES). The crosswalk tables treat only questionnaire variables, not derived (“composite”) variables, although analysts may find many of the latter also of value for cross-cohort comparisons.

B.1.1 Comparability of Test Scores

The NELS:88 and ELS:2002 mathematics assessments were equated and are available on the same scale, for grades 10 and 12. However, the ELS:2002 reading test was administered only in the base year (grade 10) and supplies a baseline covariate, not a gain measure, nor did ELS:2002 test in the two other areas of the NELS:88 cognitive test battery, science and social studies.

B.1.2 Comparability of Questionnaire Content

Despite the intention to preserve a core of comparable items, for many reasons, some questions have changed and others have been added or dropped. Across the cohorts, questions may be identical in content and format or may differ in one or more ways: the question, item, or response wording; the order in which response options were presented; the manner in which the data were collected (e.g., categorical response option versus open-ended response fields, instructions to mark one versus mark all that apply); and the population to which the question applies. Table A-1 below will be helpful to analysts, not just in suggesting potential comparison variables, but in making note of differences and evaluating the suitability of various variables for their research plan.

B.1.3 Comparability of Administrative Data (Including Transcripts)

In design and coding, NELS:88 and ELS:2002 are quite similar, and will support comparisons across studies. Analysts interested in comparing high school coursetaking patterns should examine the CSSC codes available in each study. The CSSC codes are the same across studies, thus facilitating direct comparisons. However, the list has evolved and certain subject areas (for example, computer science) have changed accordingly. For some analyses, users may wish to construct measures in a variety of ways to ensure that their findings are robust with respect to different variable specifications. In addition, analysts should consider changes in subject areas over time when conducting time trend analyses and interpreting findings. Although high school transcripts (and in time postsecondary transcripts) should be viewed as readily usable across the two studies, NELS:88 lacks much of the postsecondary records information concerning federal grants and loans that was collected for ELS:2002.

B.1.4 Comparability: Eligibility and Exclusion

One obstacle to precise comparison is that some students were excluded from NELS:88, owing to severe disabilities or language barriers. No students were excluded from the ELS:2002 high school transcript component and exclusion rates for the ELS:2002 questionnaires and assessments conducted in 2002 and 2004 are quite low in comparison to predecessor studies. Ingels (1996, NCES 96-723) provides information about NELS:88 and the earlier studies, and the exclusion rates and policies of ELS:2002 can be found in the base-year Data File User's Manual (NCES 2004-405).

B.1.5 Other Factors Affecting Comparability

Although the studies were designed to be as comparable as possible, caution must nonetheless be exercised in comparing NLS-72, HS&B, NELS:88, and ELS:2002 data. School and student response rates differed somewhat, as did item response rates. Missing item data have been statistically imputed for selected variables in ELS:2002, although not in the prior studies. Likewise, missing test scores have been imputed in ELS:2002. There were differences in mode and precise timing of survey administration. NELS:88 in 2000, for example, was administered starting in the spring, but ELS:2002 started in the summer of 2012. The technology of data collection has changed considerably over the years, especially for out-of-school cohorts, for which paper-and-pencil questionnaires were replaced, first with computerized telephone and personal interviews, and in the ELS:2002 second and third follow-ups, in substantial measure by web self-administrations. The extent of the impact of mode effects has not been measured in field test experiments or by other devices. Standard classification variables, such as race classifications, have subtly changed over time, and in ELS:2002, household possessions were dropped from the SES index used in the prior studies. Comparison items appear below in Table B-1, following the References section.

*** Indicates forms¹ which were included in both the full-length and abbreviated questionnaire (forms not marked with asterisks were included in the full-length questionnaire only)

Form: Consent to Participate***

Question wording: In years past you responded to one or more surveys for the Education Longitudinal Study of 2002 (ELS:2002). This study is sponsored by the U.S. Department of Education and includes about 16,000 other participants who were selected from high schools across the country in 2002 and 2004. The purpose of ELS:2002 is to understand young people's transition from high school to adulthood, including the different pathways people take towards further education and the world of work. Today, we are asking you to complete a follow-up interview which will ask questions about your education, your most recent work experiences, your family, and your community. On average, it takes about 35 minutes to complete, depending on your responses.

Participation is voluntary. Your answers may be used only for statistical purposes and may not be disclosed, or used, in identifiable form for any other purpose except as required by law [Education Sciences Reform Act of 2002 (ESRA 2002) Public Law 107-279, Section 183]. You may withdraw from the study at any point. However, your answers are very important because they represent many others who were not selected to take part. You may skip any question that you don't want to answer.

+++++

Section A: Current Activities and Education

Form: Introduction to Section A***

Question wording: First we would like to ask you about your current activities and your educational background.

+++++

Routing: Go to F3A01.

Form: F3A01***

Question wording: Are you currently...

(Please answer 'Yes' or 'No' for each row below.)

¹ The term "form" refers to a questionnaire screen, as in a web survey. For more information, see the Glossary, Appendix A.

+++++

Variable: F3A01A

Item wording: working for pay at one or more full-time jobs? (please answer 'yes' if you have at least one job at which you work 35 hours/week or more)

1=Yes

0=No

Variable: F3A01B

Item wording: working for pay at one or more part-time jobs? (please answer 'yes' if you have at least one job at which you work less than 35 hours/week)

1=Yes

0=No

Variable: F3A01C

Item wording: serving in another work experience, such as an apprenticeship, training program, or internship?

1=Yes

0=No

Variable: F3A01D

Item wording: taking courses at a two- or four-year college, including graduate or professional schools?

1=Yes

0=No

Variable: F3A01E

Item wording: taking courses at a vocational, technical, or trade school?

1=Yes

0=No

Variable: F3A01F

Item wording: keeping house full-time (homemaker)?

1=Yes

0=No

Variable: F3A01G

Item wording: caring for dependent children or adults?

1=Yes

0=No

Variable: F3A01H

Item wording: serving in the armed forces or military, whether active duty, reserves, or National Guard?

1=Yes

0=No

Routing: if respondent answers at least one item then go to F3A02;
else go to F3A03.

~~~~~  
Form: F3A02

Question wording: Are the work, school, and home activities you just told us about the same now as they were during the last week in June 2012?

+++++

Variable: F3A02

1=Yes

0=No

Routing: if F3A02=yes and respondent is already known to have a high school credential, then go to F3A11;

else if F3A02=yes then go to F3A04;

else go to F3A03.

~~~~~  
Form: F3A03

Question wording: During the last week in June 2012, were you...

(Please answer 'Yes' or 'No' for each row below.)

+++++

Variable: F3A03A

Item wording: working for pay at one or more full-time jobs? (please answer 'yes' if you had at least one job at which you worked 35 hours/week or more)

1=Yes

0=No

Variable: F3A03B

Item wording: working for pay at one or more part-time jobs? (please answer 'yes' if you had at least one job at which you worked less than 35 hours/week)

1=Yes

0=No

Variable: F3A03C

Item wording: serving in another work experience, such as an apprenticeship, training program, or internship?

1=Yes

0=No

Variable: F3A03D

Item wording: taking courses at a two- or four-year college, including graduate or professional schools?

1=Yes

0=No

Variable: F3A03E

Item wording: taking courses at a vocational, technical, or trade school?

1=Yes

0=No

Variable: F3A03F

Item wording: keeping house full-time (homemaker)?

1=Yes

0=No

Variable: F3A03G

Item wording: caring for dependent children or adults?

1=Yes

0=No

Variable: F3A03H

Item wording: serving in the armed forces or military, whether active duty, reserves, or National Guard?

1=Yes

0=No

Routing: if already known that respondent has a high school credential, then go to F3A11; else go to F3A04.

~~~~~  
Form: F3A04\*\*\*

Question wording:

[When we spoke with you in 2006, you indicated that you had not received a high school credential. Since that time, have you received a high school diploma, certificate of attendance, or a GED or other equivalency certificate? / Have you received a high school diploma, certificate of attendance, or a GED or other equivalency certificate?]

+++++

Variable: F3A04

1=Yes

0=No

Routing: if F3A04=yes then go to F3A05;  
else go to F3A10;

~~~~~  
Form: F3A05***

Question wording: What type of high school diploma or certificate did you complete? Did you receive a...

+++++

Variable: F3A05

1=diploma

2=certificate of attendance, or

3=GED or other equivalency certificate?

Routing: Go to F3A06.

~~~~~  
Form: F3A06\*\*\*

Question wording: In what month and year did you receive your [diploma/certificate of attendance/GED or other equivalency/high school credential]?

+++++

Variable: F3A06

Routing: if respondent has earned a GED then go to F3A07;  
else go to F3A11.

~~~~~  
Form: F3A07

Question wording: How did you earn your GED or equivalency, or in other words, what program or school were you enrolled in, if any?

+++++

Variable: F3A07

1=No program, you just took the exam

2=Part of a job training program

3=Enrolled through adult education

4=Part of a child care program or early childhood program

5=Some other program

Routing: Go to F3A08.

~~~~~  
Form: F3A08

Question wording: From what state did you receive your GED or equivalency?

+++++

Variable: F3A08

Routing: Go to F3A09.

~~~~~  
Form: F3A09

Question wording: Why did you decide to complete your GED or equivalency? Was it...

(Please answer 'yes' or 'no' for each row below.)

+++++

Variable: F3A09A

Item wording: to improve, advance, or keep up to date on your current job?

1=Yes

0=No

Variable: F3A09B

Item wording: to train for a new job/career?

1=Yes

0=No

Variable: F3A09C

Item wording: to improve basic reading, writing or math skills?

1=Yes

0=No

Variable: F3A09D

Item wording: to meet requirements for additional study?

1=Yes

0=No

Variable: F3A09E

Item wording: required or encouraged by your employer?

1=Yes

0=No

Variable: F3A09F

Item wording: for personal, family or social reasons?

1=Yes

0=No

Routing: Go to F3A11.

~~~~~  
Form: F3A10

Question wording: Are you currently working towards a GED or equivalent?

+++++

Variable: F3A10

1=Yes

0=No

Routing: Go to F3A11.

~~~~~  
Form: F3A11***

Question wording:

[Since leaving high school, have you attended any college, university, or a vocational, technical, or trade school for college credit?]

-or-

[When we spoke with you in 2006, you indicated that after high school you had attended: PS school #1, PS school #2, etc.

Since that time, have you attended any other college, university, or a vocational, technical, or trade school for college credit?]

+++++

Variable: F3A11

1=Yes

0=No

Routing: if F3A11=yes then go to F3IIPEDS;

else if there is one or more PS school pre-loaded from F2 then go to F3ILASTINST;

else go to F3A17.

~~~~~  
Form: F3IIPEDS\*\*\*

Question wording: [You have already told us about: PS school #1, PS school #2, etc.]

What [other] college, university, or vocational, technical, or trade school have you attended since leaving high school?

+++++

Variable(s): this form allows for collection of an IPEDS code (F3IIPEDS) for each attended school, which is then used to populate many other variables on the ELS F3 student-institution file (F3ILEVEL, F3ICNTRL, F3ISECTR, etc.) based on IPEDS data.

Routing: go to F3ISTDATE.

~~~~~  
Form: F3ISTDATE***

Question wording: In what month and year did you first attend [this school]?

+++++

Variable: F3ISTDATE

Routing: go to PS Other.

~~~~~  
Form: PS Other\*\*\*

Question wording: You have already told us about: PS school #1, PS school #2, etc.

Have you attended any other college, university, or vocational, technical, or trade school for college credit?

+++++

Variable: N/A (this item does not directly feed into any particular variable on the final datafile; it is instead used for survey routing purposes, i.e. it is used to determine whether or not the respondent should be asked for the name(s) of any other attended postsecondary institutions).

1=Yes

0=No

Routing: if yes then loop back to F3IIPEDS;  
else go to F3ILASTINST.

~~~~~  
Form: F3ILASTINST***

Question wording:

[Earlier you mentioned that you are currently taking courses at a college, university, or a vocational, technical, or trade school. Which institution are you currently attending?]

-or-

[Which institution did you last attend?]

Response options: all attended institutions collected thus far – in either F2 and/or F3 – are displayed as response options, along with an option for “another institution”.

+++++

Variable: F3ILASTINST

Routing: if respondent indicates "another institution" then go to PS Last (Alternate);
else if currently attending a postsecondary institution then go to F3A13;
else go to F3A12.

~~~~~  
Form: PS Last (Alternate)\*\*\*

Question wording: What institution [are you currently attending/did you last attend]?

+++++

Variable(s): this form allows for collection of an IPEDS code (F3IIPEDS) for the last attended school, which is then used to populate many other variables on the ELS F3 student-institution file (F3ILEVEL, F3ICNTRL, F3ISECTR, etc.) based on IPEDS data.

Routing: if currently attending a postsecondary institution then go to F3A13;  
else go to F3A12.

~~~~~  
Form: F3A12

Question wording: In what month and year did you last attend [name of last-attended postsecondary institution]?

+++++

Variable: F3A12

Routing: go to F3PSLCRED.

~~~~~  
Form: F3PSLCRED\*\*\*

Question wording: Have you earned a degree or certificate from [name of last-attended postsecondary institution]?

+++++

Variable: F3PSLCRED

1=Yes

0=No

Routing: if F3PSLCRED = yes then go to F3ICREDTYPE (Last Attended Institution);  
else go to F3A13.

~~~~~  
Form: F3A13***

Question wording:

[What type of degree or certificate are you currently pursuing at [name of currently attended postsecondary institution]? / What type of degree or certificate are you currently pursuing? /

What type of degree or certificate were you pursuing when you were last attending [name of last-attended postsecondary institution]? / What type of degree or certificate were you pursuing when you were last attending a college, university, vocational, technical or trade school?]

+++++

Variable: F3A13

- 1=Undergraduate certificate or diploma (usually less than 2 years), including those leading to a license (for example, cosmetology)
- 2=Associate's Degree (usually a 2-year degree)
- 3=Bachelor's Degree (usually a 4-year degree)
- 4=Post-baccalaureate certificate
- 5=Master's Degree
- 6=Post-Master's certificate
- 7=Doctoral Degree – research/scholarship (for example, PhD., EdD., etc.)
- 8=Doctoral Degree – professional practice (including: chiropractic, dentistry, law, medicine, optometry, pharmacy, podiatry, or veterinary medicine)
- 9=Doctoral Degree – other
- 10=You [are/were] not seeking a degree or certificate

Routing: go to Other Credential.

~~~~~  
Form: F3ICREDTYPE (Last Attended Institution)\*\*\*

Question wording: What type of degree or certificate did you receive from [name of last-attended postsecondary institution]?

(Please select one option below; if you received more than one degree or certificate, we will ask you later about the other credentials you have received.)

+++++

Variable: F3ICREDTYPE\_1, F3ICREDTYPE\_2

- 1=Undergraduate certificate or diploma (usually less than 2 years), including those leading to a license (for example, cosmetology)
- 2=Associate's Degree (usually a 2-year degree)
- 3=Bachelor's Degree (usually a 4-year degree)
- 4=Post-baccalaureate certificate
- 5=Master's Degree
- 6=Post-Master's certificate
- 7=Doctoral Degree – research/scholarship (for example, PhD., EdD., etc.)
- 8=Doctoral Degree – professional practice (including: chiropractic, dentistry, law, medicine, optometry, pharmacy, podiatry, or veterinary medicine)
- 9=Doctoral Degree – other

Routing: Go to F3ICREDDATE (Last Attended Institution).  
~~~~~

Form: F3ICREDDATE (Last Attended Institution)***

Question wording: In what month and year did you receive your [credential type] from [name of last-attended postsecondary institution]?

+++++

Variable: F3ICREDDATE_1, F3ICREDDATE_2

Routing: go to F3ICREDFIELD (Last Attended Institution).

~~~~~  
Form: F3ICREDFIELD (Last Attended Institution)\*\*\*

Question wording: What was your primary major or program of study for your [credential type] from [name of last-attended postsecondary institution]?

+++++

Variable(s): F3ICREDFIELD\_1, F3ICREDGEN\_1, F3ICREDSPEC\_1,  
F3ICREDFIELD\_2, F3ICREDGEN\_2, F3ICREDSPEC\_2

Routing: If credential type is an Associate's degree or higher, then go to F3ICREDDBLMAJ (Last Attended Institution);  
else go to Other Credential.

~~~~~  
Form: F3ICREDDBLMAJ (Last Attended Institution)

Question wording: Did you have a secondary major or program of study for your [credential type] from [name of last-attended postsecondary institution]?

+++++

Variable: F3ICREDDBLMAJ_1, F3ICREDDBLMAJ_2
1=Yes
0=No

Routing: If yes then go to F3ICREDFIELD2;
else go to Other Credential.

~~~~~  
Form: F3ICREDFIELD2

Question wording: What was your secondary major or program of study for your [credential type] from [name of last-attended postsecondary institution]?

+++++

Variable(s): F3ICREDFIELD2\_1, F3ICREDGEN2\_1, F3ICREDSPEC2\_1,  
F3ICREDFIELD2\_2, F3ICREDGEN2\_2, F3ICREDSPEC2\_2

Routing: go to Other Credential.  
~~~~~

Form: Other Credential***

Question wording:

[Have you received any degrees or certificates from any [other] college, university, or vocational, technical, or trade school?]

-or-

[You have already told us about:

Your [credential type] from [name of last-attended postsecondary school]

Have you received any other degrees or certificates from a college, university, or vocational, technical, or trade school?]

+++++

Variable: N/A (this item does not directly feed into any particular variable on the final datafile; it is instead used for survey routing purposes, i.e. it is used to determine whether or not the respondent should be asked additional follow-up questions re: any other postsecondary credentials earned)

1=Yes

0=No

Routing: if yes then go to F3ICREDTYPE;
else go to F3A14.

~~~~~  
Form: F3ICREDTYPE\*\*\*

Question wording:

[You have already told us about: Your [credential] from [PS school]]

What other degrees or certificates do you have?

(Please select one option below; if you have multiple degrees/certificates, we will ask you later about the other credentials you may have received.)

+++++

Variable: F3ICREDTYPE\_1, F3ICREDTYPE\_2

1=Undergraduate certificate or diploma (usually less than 2 years), including those leading to a license (for example, cosmetology)

2=Associate's Degree (usually a 2-year degree)

3=Bachelor's Degree (usually a 4-year degree)

4=Post-baccalaureate certificate

5=Master's Degree

6=Post-Master's certificate

7=Doctoral Degree – research/scholarship (for example, PhD., EdD., etc.)

8=Doctoral Degree – professional practice (including: chiropractic, dentistry, law, medicine, optometry, pharmacy, podiatry, or veterinary medicine)

9=Doctoral Degree – other

Routing: Go to Credential School

~~~~~  
Form: Credential School***

Question wording: From what institution did you earn this [credential type]?

Response options: all attended institutions collected thus far – in either F2 and/or F3 – are displayed as response options, along with an option for “another institution”.

+++++

Variable: N/A (this item does not directly feed into any particular variable on the final datafile; it is instead used to determine with which record on the ELS F3 student-institution file the credential in question should be associated).

Routing: If respondent indicates "another school", or respondent provides no response, then go to Credential School (Alternate);
else go to F3ICREDDATE.

~~~~~  
Form: Credential School (Alternate)\*\*\*

Question wording: From what institution did you earn this [credential type]?

+++++

Variable(s): this form allows for collection of an IPEDS code (F3IIPEDS) for the credential-awarding school, which is then used to populate many other variables on the ELS F3 student-institution file (F3ILEVEL, F3ICNTRL, F3ISECTR, etc.) based on IPEDS data.

Routing: go to F3ICREDDATE.

~~~~~  
Form: F3ICREDDATE***

Question wording: In what month and year did you receive your [credential type] from [name of credential-awarding postsecondary institution]?

+++++

Variable: F3ICREDDATE_1, F3ICREDDATE_2

Routing: Go to F3OTHMAJOR.

~~~~~  
Form: F3ICREDFIELD\*\*\*

Question wording: What was your primary major or program of study for your [credential type] from [name of credential-awarding postsecondary institution]?

+++++

Variable(s): F3ICREDFIELD\_1, F3ICREDGEN\_1, F3ICREDSPEC\_1,  
F3ICREDFIELD\_2, F3ICREDGEN\_2, F3ICREDSPEC\_2

Routing: if credential type is Associate's degree or higher then go to F3ICREDDBLMAJ;  
else go to Additional Credentials.

~~~~~  
Form: F3ICREDDBLMAJ

Question wording: Did you have a secondary major or program of study for your [credential type] from [name of credential-awarding postsecondary institution]?

+++++

Variable: F3ICREDDBLMAJ_1, F3ICREDDBLMAJ_2
1=Yes
0=No

Routing: if yes then go to F3ICREDFIELD2;
else go to Additional Credentials.

~~~~~  
Form: F3ICREDFIELD2

Question wording: What was your secondary major or program of study for your [credential type] from [name of credential-awarding postsecondary institution]?

+++++

Variable(s): F3ICREDFIELD2\_1, F3ICREDGEN2\_1, F3ICREDSPEC2\_1,  
F3ICREDFIELD2\_2, F3ICREDGEN2\_2, F3ICREDSPEC2\_2

Routing: go to Additional Credentials.

~~~~~  
Form: Additional Credentials***

Question wording:

You have already told us about:

Your [credential] from [name of credential-awarding postsecondary institution]

Have you received any other degrees or certificates from a college, university, or vocational, technical, or trade school?

+++++

Variable: F3MORECRED
1=Yes
0=No

Routing: if yes then loop back to F3ICREDTYPE;
else go to F3A14.

~~~~~  
Form: F3A14

Question wording: [Have you participated/Did you participate] in any of the following as a part of your [undergraduate/college] education?

(Please answer 'Yes' or 'No' for each row below.)

+++++

Variable: F3A14A

Item wording: Internship, co-op, field experience, student teaching, or clinical assignment

1=Yes

0=No

Variable: F3A14B

Item wording: Research project with a faculty member outside of course or program requirements

1=Yes

0=No

Variable: F3A14C

Item wording: Study abroad

1=Yes

0=No

Variable: F3A14D

Item wording: Community-based project (for example, service learning) as part of a regular course

1=Yes

0=No

Variable: F3A14E

Item wording: Culminating senior experience, such as a capstone course, senior project or thesis, or comprehensive exam

1=Yes

0=No

Variable: F3A14F

Item wording: Program in which you were mentored

1=Yes

0=No

Routing: go to F3A15.

~~~~~  
Form: F3A15

Question wording: How important would you say your [undergraduate education was in/college education was in/college attendance has been in] preparing you for the following aspects of your life?

+++++

Variable: F3A15A

Item wording: Work and career

1=Very important

2=Somewhat important

3=Not at all important

Variable: F3A15B

Item wording: Further education

1=Very important

2=Somewhat important

3=Not at all important

Variable: F3A15C

Item wording: Establishing your financial security

1=Very important

2=Somewhat important

3=Not at all important

Variable: F3A15D

Item wording: Civic participation (for example, your involvement in the community, or voting)

1=Very important

2=Somewhat important

3=Not at all important

Routing: if respondent has a PhD or professional doctorate then go to F3A18;
else if respondent is not currently enrolled and has not received a postsecondary credential then go to F3A16;
else if respondent has previous attendance at a 4-year school, is no longer attending a 4-year school, and has no degree from a 4-year school, then go to F3A16;
else go to F3A17.

~~~~~  
Form: F3A16

Question wording:

[Earlier you indicated that you are no longer enrolled in any school and that you did not obtain a college degree or a certificate. Which of the following are reasons you left school?]

-or-

[Earlier you indicated that you had once attended a 4-year college, but did not obtain a credential from a 4-year college. Which of the following are reasons you left a 4-year college without completing a credential?]

(Please answer 'Yes' or 'No' for each row below.)

+++++

Variable: F3A16A

Item wording: Done taking your desired classes

1=Yes

0=No

Variable: F3A16B

Item wording: You couldn't afford to continue going to school

1=Yes

0=No

Variable: F3A16C

Item wording: You'd rather work and make money than continue going to school

1=Yes

0=No

Variable: F3A16D

Item wording: Change in family status (for example, marriage, baby, or death in your family)

1=Yes

0=No

~~~~~

Form: F3A17***

Question wording: What is the highest level of education you ever expect to complete ?

+++++

Variable: F3A17

1=Less than high school graduation

2=GED or other high school equivalency only

3=High school diploma only

4=Undergraduate certificate or diploma (usually less than 2 years), including those leading to a license (for example, cosmetology)

5=Associate's Degree (usually a 2-year degree)

6=Bachelor's Degree (usually a 4-year degree)

7=Master's Degree

8=Doctoral Degree – research/scholarship (for example, PhD., EdD., etc.)

9=Doctoral Degree – professional practice (including: chiropractic, dentistry, law, medicine, optometry, pharmacy, podiatry, or veterinary medicine)

10=Doctoral Degree – other

11=Don't know

Routing: if respondent has any postsecondary attendance then go to F3A18;
else go to F3A27.

~~~~~  
Form: F3A18

Question wording: Other than money you may have borrowed from family or friends, did you take out any type of education loans to help pay for your education since high school?

+++++

Variable: F3A18

1=Yes

0=No

Routing: if F3A18=yes then go to F3A19;  
else go to F3A23.

~~~~~  
Form: F3A19

Question wording: What is the total amount of money you borrowed in student loans since high school? Do not include in your answer any money you borrowed from family or friends, or money your parents borrowed.

(Please round to a whole number. If you are unsure of the amount, please provide your best guess.)

+++++

Variable: F3A19

Routing: go to F3A20.

~~~~~  
Form: F3A20

Question wording: Are you currently making any monthly payments on any of your education loans?

+++++

Variable: F3A20

1=Yes

0=No

Routing: if F3A20=yes then go to F3A21;  
else go to F3A22.

~~~~~  
Form: F3A21

Question wording: How much do you pay each month for these loans?

(Please round to a whole number.)

+++++

Variable: F3A21

Routing: go to F3A22.

~~~~~  
Form: F3A22

Question wording: Please indicate whether your student loan debt has influenced your employment plans and decisions in any of the following ways.

Did you...

+++++

Variable: F3A22A

Item wording: take a job outside your field of study or training because of your student loan debt?

1=Yes

0=No

Variable: F3A22B

Item wording: take a less desirable job because of your student loan debt?

1=Yes

0=No

1=Yes

0=No

Variable: F3A28B

Item wording: a professional organization?

1=Yes

0=No

Variable: F3A28C

Item wording: an industry, company, or some other organization?

1=Yes

0=No

Routing: Go to F3A29.

---

Form: F3A29

Question wording: The following questions are about your most recent certification or license.

Did you have to do any of the following to get this certification or license?

+++++

Variable: F3A29A

Item wording: Demonstrate skills while on the job

1=Yes

0=No

Variable: F3A29B

Item wording: Pass a test or exam

1=Yes

0=No

Variable: F3A29C

Item wording: Submit a portfolio of your work

1=Yes

0=No

Routing: go to F3A30.

---

Form: F3A30

Question wording: To maintain this certification or license, do you have to...

+++++

Variable: F3A30A

Item wording: take continuing education classes or earn continuing education units (CEUs)?

1=Yes

0=No

Variable: F3A30B

Item wording: take periodic tests?

1=Yes

0=No

Routing: go to F3A31.

---

Form: F3A31

Question wording: Can this certification or license be...

+++++

Variable: F3A31A

Item wording: revoked or suspended for any reason?

1=Yes

2=No

3=Don't know

Variable: F3A31B

Item wording: used if you wanted to get a job with any employer in that field? (Answer "yes" for credentials that are recognized state-wide or regionally.)

1=Yes

2=No

3=Don't know

Routing: go to F3A32.

~~~~~  
Form: F3A32

Question wording: Was a professional certification or a state or industry license required for your current or most recent job?

+++++

Variable: F3A32

1=Yes

0=No

Routing: go to Introduction to Section B.

Section B: Current / Most Recent Employment

~~~~~

Form: Introduction to Section B

Question wording: In this next section we'll ask [further] questions about your current or most recent employment, including any military experience.

+++++

Routing: if respondent previously indicated their current or June 2011 activities included military service, then go to F3B02;  
else go to F3B01.

~~~~~  
Form: F3B01

Question wording: Have you ever been in the military?

+++++

Variable: F3B01

1=Yes

0=No

Routing: If F3B01=yes then go to F3B02;
else if respondent did not indicate (in Section A) having a job either currently or in June 2011
then go to F3B09;
else if respondent is not currently working full-time then go to F3B10;
else go to F3B12.

~~~~~  
Form: F3B02

Question wording: In which branches of the military have you served?

Item wording: Chance to balance work and family responsibilities

1=1 = Definitely not an aspect of the job

2=2

3=3

4=4

5=5 = Very much an aspect of the job

Routing: go to F3B26.

~~~~~  
Form: F3B26\*\*\*

Question wording: Now we would like to ask you a few questions concerning your earnings at your job as a [job name]. For your job as a [job name], what is the easiest way for you to report your total earnings before taxes or other deductions?

(We use this information to compare the amount that people earn in different types of jobs.)

+++++

Variable: F3B26

1=per hour

2=per day

3=per week

4=every 2 weeks

5=twice per month

6=per month

7=per year

Routing: if respondent does not answer "per hour" go to F3B27;  
else go to F3B28.

~~~~~  
Form: F3B27***

Question wording: Even though you told me it is easier to report your earnings [F3B26], [are/were] you paid at an hourly rate on your job as a [job name]?

+++++

Variable: F3B27

1=Yes

0=No

Routing: Go to F3B28.

~~~~~  
Form: F3B28\*\*\*

Question wording: For your job as a [job name], about how much [do/did] you earn [per hour/F3B26] before taxes and other deductions?

+++++

Variable: F3B28

Routing: go to F3B29.

~~~~~  
Form: F3B29

Question wording: Which of the following best describes your job as a [job name]?

+++++

Variable: F3B29

1=It fulfills your long-term career goals.

2=It is a step on the path to your long-term career goals.

3=It is not related to your long-term career goals.

4=You do not have long-term career goals.

Routing: go to F3B30.

~~~~~  
Form: F3B30

Question wording: [Are/Were] any of the following required for your job as a [job name]?

+++++

Variable: F3B30A

Item wording: A post-baccalaureate graduate degree

1=Yes

0=No

Variable: F3B30B

Item wording: A bachelor's degree (usually a 4-year degree)

1=Yes

0=No

Variable: F3B30C

Item wording: An associate's degree (usually a 2-year degree)

1=Yes

0=No

Variable: F3B30D

Item wording: An undergraduate certificate or diploma (usually less than 2 years), including those leading to a license (for example, cosmetology)

1=Yes

0=No

Routing: if respondent has any postsecondary attendance then go to F3B31;  
else if currently working or currently serving in the military then go to F3B34;  
else go to F3B35;

~~~~~  
Form: F3B31

Question wording: How closely related [is/was] your job as a [job name] to the major or field of study you had when you were last enrolled in college? Would you say...

+++++

Variable: F3B31

- 1=closely related,
- 2=somewhat related, or
- 3=not related?

Routing: if respondent provides any answer other than "closely related" (or does not respond), then go to F3B32;
else go to F3B33.

~~~~~  
Form: F3B32

Question wording: Have you ever had a job that was closely related to the major or field of study you had when you were last enrolled in college?

+++++

Variable: F3B32

- 1=Yes
- 0=No

Routing: Go to F3B33.

~~~~~  
Form: F3B33

Question wording: [Would it be/Was it] difficult for you to do your job as a [job name] without the courses you took in college?

+++++

Variable: F3B33

- 1=Yes
- 0=No

Routing: if respondent is currently employed or currently serving in the armed forces then go to F3B34;
else go to F3B35.

~~~~~  
Form: F3B34

Question wording: Please indicate the extent to which you agree or disagree with each of the following statements about your job as a [job name]:

+++++

Variable: F3B34A

Item wording: Most people at work are pretty supportive of you.

- 1=Strongly agree
- 2=Agree
- 3=Neither agree nor disagree
- 4=Disagree
- 5=Strongly disagree

Variable: F3B34B

Item wording: There are people you can learn from at work.

- 1=Strongly agree
- 2=Agree
- 3=Neither agree nor disagree
- 4=Disagree
- 5=Strongly disagree

Item wording: There are people you can turn to for help in solving a work problem.

- 1=Strongly agree
- 2=Agree
- 3=Neither agree nor disagree
- 4=Disagree
- 5=Strongly disagree

Variable: F3B34D

Item wording: You feel fairly well satisfied with your present job.

- 1=Strongly agree
- 2=Agree
- 3=Neither agree nor disagree
- 4=Disagree
- 5=Strongly disagree

Variable: F3B34E

Item wording: Most days you are enthusiastic about your work.

- 1=Strongly agree
- 2=Agree
- 3=Neither agree nor disagree
- 4=Disagree
- 5=Strongly disagree

Variable: F3B34F

Item wording: You find real enjoyment in your work.

- 1=Strongly agree
- 2=Agree
- 3=Neither agree nor disagree
- 4=Disagree
- 5=Strongly disagree

Variable: F3B34G

Item wording: You plan to remain in your current job over the next year.

- 1=Strongly agree
- 2=Agree
- 3=Neither agree nor disagree
- 4=Disagree
- 5=Strongly disagree

Variable: F3B34H

Item wording: You don't usually think about leaving this job.

1=Strongly agree

2=Agree

3=Neither agree nor disagree

4=Disagree

5=Strongly disagree

Variable: F3B34I

Item wording: You feel pretty strongly committed to keeping your current job.

1=Strongly agree

2=Agree

3=Neither agree nor disagree

4=Disagree

5=Strongly disagree

Routing: Go to F3B35.

~~~~~  
Form: F3B35

Pre-Logic: if R last worked >1 year ago then do not administer F3B35 and instead skip to Introduction to Section C;
else administer F3F35.

Question wording:

Now we would like to ask you about any formal job training you have received from an employer. Think about the skills that are needed for doing your job as a [job name].

In the last 12 months, have you participated in a formal training program offered by an employer or a union that helped you learn or improve the skills needed to do your job?

(Include training from past as well as current employers if received in the last 12 months.)

+++++

Variable: F3B35

1=Yes

0=No

Routing: go to Introduction to Section C.

Section C: Employment History / Future Employment Plans

~~~~~

Form: Introduction to Section C

Question wording: Next we'd like to collect a short employment history, and ask about your future employment plans.

+++++

Routing: if last employment/military service was prior to 2009 (or, if respondent has no employment/military service), then go to F3C07;  
else if last employment/military service was during 2009, then go to F3C05;  
else if last employment/military service was during 2010, then go to F3C03;  
else go to F3C01.

~~~~~  
Form: F3C01

Question wording: Across all of your jobs during the 2011 calendar year,[including any military or civilian employment,] how many weeks did you work for pay? Please include all paid time off such as vacations, sick leave, and family leave in your weeks spent working; do not include time spent out of work, between jobs, or without pay.

(Please provide an answer between 0 and 52 weeks.)

+++++

Variable: F3C01

Routing: if respondent reports working for pay for 0 weeks during 2011, then skip to F3C03;
else go to F3C02.

~~~~~  
Form: F3C02

Question wording: [Earlier you told us how many hours you are currently working per week. Now, how / How] many hours did you work for pay at all jobs during a typical working week in 2011?

+++++

Variable: F3C02

Routing: go to F3C03.

~~~~~  
Form: F3C03

Question wording: [Now, I would like you to think back to 2010.][Including any military or civilian employment during/During] the 2010 calendar year, were you...

+++++

Variable: F3C03

1=employed for six months or more

2=employed, but for less than six months, or

3=not employed at all?

Routing: if respondent reports being employed at all during 2010, then go to F3C04;
else go to F3C05.

~~~~~

Form: F3C04

Question wording: For your employment in 2010, were you primarily working...

+++++

Variable: F3C04

1=35 hours or more per week, or

2=less than 35 hours per week?

Routing: go to F3C05.

Form: F3C05

Question wording: [Now, I would like you to go back a year further to 2009. ][Including any military or civilian employment during/During] the 2009 calendar year, were you...

+++++

Variable: F3C05

1=employed for 6 months or more

2=employed, but for less than 6 months, or

3=not employed at all?

Routing: if respondent reports being employed at all during 2009, then go to F3C06;  
else go to F3C07.

Form: F3C06

Question wording: For your employment in 2009, were you primarily working...

+++++

Variable: F3C06

1=35 hours or more per week, or

2=less than 35 hours per week?

Routing: Go to F3C07.

Form: F3C07\*\*\*

Question wording: Since January 2009, have you ever been unemployed for a period of one month or more, that is, not employed but seeking employment ?

+++++

Variable: F3C07

1=Yes

0=No

Routing: if F3C07=yes then go to F3C08;  
else go to F3C11.

Form: F3C08\*\*\*

Question wording: Since January 2009, approximately how many months in total have you been unemployed (not employed but seeking employment)?

+++++

Variable: F3C08

Routing: go to F3C09.

~~~~~  
Form: F3C09

Question wording: Since January 2009, approximately how many times have you been unemployed for a period of one month or more (not employed but seeking employment)?

+++++

Variable: F3C09

Routing: if respondent reports multiple unemployment spells since 1/2009 then go to F3C10; else go to F3C11.

~~~~~  
Form: F3C10

Question wording: [Of the [F3C09] times you mentioned being unemployed since January 2009 / Since January 2009], what was the longest period of time you were unemployed (not employed but seeking employment)?

(Please indicate your longest period of unemployment in terms of number of months.)

+++++

Variable: F3C10

Routing: go to F3C11.

~~~~~  
Form: F3C11

Question wording: Since January 2009, have you ever received unemployment compensation, applied for unemployment compensation, or been eligible to receive unemployment compensation?

+++++

Variable: F3C11

1=Yes

0=No

Routing: go to F3C12.

~~~~~  
Form: F3C12

Question wording: Since January 2009, have any of the following interfered with your career plans?

(Please answer 'Yes' or 'No' for each row below.)

+++++

Variable: F3C12A

Item wording: Not having the required degree, license, or credential

1=Yes

0=No

Variable: F3C12B

Item wording: Not having high enough grades

1=Yes

0=No

Variable: F3C12C

Item wording: Being considered “overqualified”

1=Yes

0=No

Variable: F3C12D

Item wording: Illness, accident, or disability

1=Yes

0=No

Variable: F3C12E

Item wording: Lack of openings in your field

1=Yes

0=No

Variable: F3C12F

Item wording: Inability to relocate

1=Yes

0=No

Variable: F3C12G

Item wording: Lack of affordable child care

1=Yes

0=No

Variable: F3C12H

Item wording: Discrimination against persons of your race or ethnic background

1=Yes

0=No

Variable: F3C12I

Item wording: Discrimination against persons of your gender

1=Yes

0=No

Variable: F3C12J

Item wording: Lack of social connections or contacts

1=Yes

0=No

Variable: F3C12K

Item wording: Difficulty getting to or from work; for example, an inability to afford transportation

1=Yes

0=No

Routing: go to F3C13.

~~~~~  
Form: F3C13***

Question wording: What job for pay or occupation do you plan to have when you are age 30?

+++++

Variable(s): F3C13A and F3C13B

Routing: If respondent indicates they don't know what job they plan to have at age 30, or indicates they don't plan on working at age 30, or otherwise does not provide a job they plan to work at age 30, then skip to Introduction to Section D;
else go to F3C14.

~~~~~  
Form: F3C14

Question wording: How much education do you think you need to get the job you expect or plan to have when you are 30 years old?

+++++

Variable: F3C14

- 1=Less than high school completion
- 2=GED or other high school equivalency
- 3=High school diploma
- 4=Undergraduate certificate or diploma (usually less than 2 years), including those leading to a license (for example, cosmetology)
- 5=Associate's Degree (usually a 2-year degree)
- 6=Bachelor's Degree (usually a 4-year degree)
- 7=Master's Degree
- 8=Doctoral Degree – research/scholarship (for example, PhD., EdD., etc.)
- 9=Doctoral Degree – professional practice (including: chiropractic, dentistry, law, medicine, optometry, pharmacy, podiatry, or veterinary medicine)
- 10=Doctoral Degree – other
- 11=Don't know

Routing: go to Introduction to Section D.

## **Section D: Family Life, Finances, and Community**

~~~~~  
Form: Introduction to Section D

Question wording: In this last section we'd like to ask you some questions about your family life, your finances, and your community.

Routing: go to F3D01.

~~~~~

Form: F3D01\*\*\*

Question wording: What is your current marital status?

+++++

Variable: F3D01

1=Single, never married

2=Married

3=Divorced

4=Separated

5=Widowed

Routing: if respondent is married, divorced, separated, or widowed then go to F3D02;  
else go to F3D04.

~~~~~  
Form: F3D02

Question wording: [Including your current marriage, how/How] many times have you been married?

+++++

Variable: F3D02

Routing: go to F3D03.

~~~~~  
Form: F3D03

Question wording: [In what month and year were you married? / In what month and year did your [first/second/third/fourth/etc.] marriage begin?]

+++++

Variable(s): F3D03\_x

Routing: if start date has not yet been collected for all marriages then re-administer F3D03;  
else if respondent is currently married then go to F3D05;  
else go to F3D04;

~~~~~  
Form: F3D04***

Question wording: Are you currently living with a significant other in a marriage-like relationship?

+++++

Variable: F3D04

1=Yes

0=No

Routing: If F3D04=yes then go to F3D05;
else go to F3D06.
~~~~~

Form: F3D05

Question wording: What is the highest level of education your [current ][spouse/partner] has completed?

+++++

Variable: F3D05

- 1=Less than high school completion
- 2=GED or other high school equivalency
- 3=High school diploma
- 4=Undergraduate certificate or diploma (usually less than 2 years), including those leading to a license (for example, cosmetology)
- 5=Associate's Degree (usually a 2-year degree)
- 6=Bachelor's Degree (usually a 4-year degree)
- 7=Master's Degree
- 8=Doctoral Degree – research/scholarship (for example, PhD., EdD., etc.)
- 9=Doctoral Degree – professional practice (including: chiropractic, dentistry, law, medicine, optometry, pharmacy, podiatry, or veterinary medicine)
- 10=Doctoral Degree – other

Routing: go to F3D06.

~~~~~  
Form: F3D06***

Question wording: Have you had any biological children, that is, children [for whom you are the natural father/for whom you are the natural mother/born to you]?

+++++

Variable: F3D06

- 1=Yes
- 0=No

Routing: if respondent has had a biological child then go to F3D07;
else go to F3D10.

~~~~~  
Form: F3D07\*\*\*

Question wording: How many biological children have you had?

+++++

Variable: F3D07

Routing: Go to F3D08.

~~~~~  
Form: F3D08

Question wording: In what month and year was your [first/second/third/fourth/etc.] biological child born?

+++++

Variable(s): F3FD08_x

Routing: go to F3D09.

~~~~~  
Form: F3D09

Pre-Logic: if respondent's current marital status is "single, never married", and birthdates have not yet been asked about for all of respondent's children, then do not administer F3D09 but go back to F3D08;

else if respondent's current marital status is "single, never married" then do not administer F3D09 but skip to F3D10;  
else administer F3D09.

Question wording: At the time of your [first/second/third/etc.] biological child's birth, were you married to your [first/second/third/etc.] child's [father/mother/other parent]?

+++++

Variable(s): F3D09\_x

1=Yes

0=No

Routing: if birthdates have not yet been asked about for all of respondent's children then go to F3D08;  
else go to F3D10.

~~~~~  
Form: F3D10

Question wording: Have you ever adopted a child?

+++++

Variable: F3D10

1=Yes

0=No

Routing: If F3D10=yes then go to F3D11;
else go to F3D13.

~~~~~  
Form: F3D11

Question wording: How many children have you adopted?

+++++

Variable: F3D11

Routing: go to F3D12.

Form: F3D12

Question wording: In what month and year did you [first/next] adopt a child?

+++++

Variable(s): F3D12\_x

Routing: if adoption dates have not yet been asked about for all adopted children, then repeat F3D12;  
else go to F3D13.

~~~~~  
Form: F3D13***

Question wording: Now we'd like to collect some information about your current living arrangements.

What is the 5-digit ZIP code for your current residence?

+++++

Routing: go to Consent for Future Participation.

~~~~~  
Form: Consent for Future Participation\*\*\*

Question wording: We are almost done with this survey. But first, we want to let you know that some survey participants may be invited to participate in future follow-up studies to learn more about their education and employment experiences. These future follow-up studies will be led by external researchers not affiliated with the Department of Education. We would like to seek your permission to allow RTI to re-contact you on behalf of one of the external researchers. Your participation in any future study is completely voluntary, but there is no substitute for your response.

Are you willing to be contacted about these future studies?

Variable: N/A (not available on final datafile)

Routing: if the respondent's correct SSN has already been collected, then go to Incentive Mailing Information;  
else go to SSN.

~~~~~  
Form: SSN

Question wording: What is your Social Security number? ***

(This information will be kept in secure and protected data files, and will be separate from the responses you've already provided in your interview. All individually identifiable information supplied by individuals or institutions to a federal agency may be used only for statistical purposes and may not be disclosed or used in identifiable form for any other purpose, except as required by law (20 U.S.C. § 9573). However, giving us your Social Security number is completely voluntary and there is no penalty for not disclosing it.)

## **Appendix E. Occupational Crosswalk: O\*NET and ELS:2002 Classifications**

---

*This page left intentionally blank.*

## E.1 Overview

The coding system employed in the ELS:2002 second and third follow-up survey instruments was O\*NET. The O\*NET classification system was developed by the U.S. Department of Labor. O\*NET provides three levels of classification: general, midlevel, and specific. Twenty-three categories comprise the general level, which expands to 96 categories at midlevel and 883 specific-level categories. Specific-level categories subsequently roll up to mid- and general-level categories. However, the ELS:2002 base-year and first follow-up occupation coding reflected a different scheme, that had been used in the prior secondary longitudinal studies, and thus has special utility for purposes of intercohort comparisons of ELS:2002 high school seniors or sophomores with senior and sophomore cohorts in the earlier studies

Given that occupation was coded differently in the present interview than in the base-year and first follow-up rounds of ELS:2002, an occupational crosswalk was constructed to map the new coding scheme to the original taxonomy. The crosswalk maps all 883 specific-level O\*NET categories to the 16 occupational categories used in the base year and first follow-up. Such a crosswalk enables users to examine either set of coded data, depending on their analysis needs. The mapping between the two occupation schemes is presented in the appendix crosswalk table.

Further details regarding the general O\*NET level, the ELS:2002 scheme, and how to use the occupational crosswalk are provided below.

### E.1.1 General O\*NET Level

The general level of coding provides the foundation for further, more detailed classification within the O\*NET structure. Given the more manageable number of occupational categories, it may also be a preferred analysis level. The 23 general-level O\*NET classifications are provided below, in numerical order. For each category, the coded value is given first, followed by the category name, which is followed by select occupational examples as classified by O\*NET.

- 11 – Management (such as sales manager, education administrator, legislator)
- 13 – Business and Financial Operations (such as accountant, financial analyst, loan officer)
- 15 – Computer and Mathematical (such as computer programmer, computer support specialist, statistician)
- 17 – Architecture and Engineering (such as architect, engineer other than software, surveying technician, drafter)
- 19 – Life, Physical, and Social Science (such as biologist, psychologist, survey researcher, research assistant)
- 21 – Community and Social Services (such as social worker, marriage counselor, clergy)
- 23 – Legal (such as lawyer, judge, law clerk)

- 25 – Education, Training, and Library (such as college professor, elementary school teacher, librarian, teacher assistant)
- 27 – Arts, Design, Entertainment, Sports, and Media (such as artist, interior designer, actor, athlete, photographer, writer)
- 29 – Healthcare Practitioners and Technical (such as physician, surgeon, registered nurse, pharmacy technician)
- 31 – Healthcare Support (such as nursing aide, medical assistant)
- 33 – Protective Service (such as police officer, fire fighter, security guard)
- 35 – Food Preparation and Serving Related (such as cook, waiter, dishwasher)
- 37 – Building and Grounds Cleaning and Maintenance (such as janitor, housekeeper, landscaper)
- 39 – Personal Care and Service (such as hair stylist, child care worker, flight attendant)
- 41 – Sales and Related (such as cashier, retail salesperson, real estate agent, insurance agent)
- 43 – Office and Administrative Support (such as bank teller, receptionist, mail carrier, office clerk)
- 45 – Farming, Fishing, and Forestry (such as farm worker, trapper, logging worker)
- 47 – Construction and Extraction (such as carpet installer, electrician, construction laborer, oil drill operator)
- 49 – Installation, Maintenance, and Repair (such as auto mechanic, heating/air conditioning installer, machinery maintenance worker)
- 51 – Production (such as assembler, meat cutter, machine operator, welder)
- 53 – Transportation and Material Moving (such as pilot, truck driver, service station attendant, stocker)
- 55 – Military Specific (any occupation performed in the military)

### **E.1.2 ELS:2002 Coding Scheme**

The hierarchy of occupational categories used in the base year and first follow-up of ELS:2002 is provided below, from lowest to highest rank. For each category, the coded value is given first, followed by the category name, which is followed by occupational examples as they originally appeared on the questionnaires. Two categories are not shown below because they are unranked: these are homemaker (4) and military (7).

- 5 – Laborer (such as construction worker, car washer, sanitary worker, farm laborer)
- 8 – Operative (such as meat cutter, assembly worker, machine operator, welder, taxicab, bus or truck driver)
- 15 – Service (such as barber, beautician, practical nurse, private household worker, janitor, waiter)

- 2 – Craftsperson (such as baker, automobile mechanic, machinist, painter, plumber, telephone installer, carpenter)
- 3 – Farmer (such as farmer, farm manager)
- 12 – Protective Services (such as detective, police officer or guard, sheriff, fire fighter)
- 11 – Proprietor, Owner (such as owner of small business, contractor, restaurant owner)
- 12 – Sales (such as salesperson, advertising or insurance agent, real estate broker)
- 1 – Clerical (such as bank teller, bookkeeper, secretary, typist, mail carrier, ticket agent)
- 6 – Manager, Administrator (such as sales manager, office manager, school administrator, buyer, restaurant manager, government official)
- 16 – Technical (such as draftsman, medical or dental technician, computer programmer)
- 14 – School Teacher (such as elementary or high school teacher)
- 9 – Professional 1 (such as accountant, artist, registered nurse, engineer, librarian, writer, social worker, actor, actress, athlete, politician, but not including school teacher) (note that Professional 1 does not require an advanced degree)
- 10 – Professional 2 (such as clergyman, dentist, physician, lawyer, scientist, college professor) (note that Professional 2 requires an advanced degree)

### E.1.3 Using the Occupational Crosswalk

O\*NET codes constitute a total of six digits at the specific level, and were recorded as such in the ELS:2002 Third Follow-up instrument. The first two digits represent the nested general level code, while the first three digits represent the nested midlevel code. As mentioned, specific level codes can roll up to the broader categorizations by simply dropping the last three digits (if midlevel desired) or last four digits (if general level desired).

The O\*NET to ELS:2002 occupational crosswalk maps every level of O\*NET classification to its appropriate ELS:2002 counterpart. Each row represents a single mapped occupation, giving a total of 883 possible mappings. All O\*NET category names, or occupational descriptors, come directly from O\*NET. The crosswalk contains eight columns, which provide the following information:

- General O\*NET Code, which gives the 2-digit O\*NET code;
- General O\*NET Category, which gives the general-level O\*NET category name;
- Midlevel O\*NET Code, which gives the 3-digit O\*NET code;
- Midlevel O\*NET Category, which gives the midlevel O\*NET category name;
- Specific O\*NET Code, which gives the 6-digit O\*NET code (instrument-recorded);
- Specific O\*NET Category, which gives the specific-level O\*NET category name;
- ELS Code, which gives the mapped ELS:2002 code (1 through 16); and
- ELS Category, which gives the mapped ELS:2002 category name.

Some O\*NET categories, in particular those that encapsulate “All Other,” correspond to more than one ELS:2002 category. In these instances, the most applicable code is presented first in the ELS Code column, followed by other possible codes in parentheses. The ELS Category column, however, reflects the most applicable category name only.

**Table E-1. Occupational Crosswalk: O\*NET and ELS:2002 Classifications**

| General O*NET code | General O*NET category | Midlevel O*NET code | Midlevel O*NET category                                                  | Specific O*NET code | Specific O*NET category                            | ELS Code | ELS category           |

# Rounds to zero.

<sup>1</sup> Bias is significant at the 0.05 level.<sup>2</sup> Bias in the sample mean is estimated as the difference between the mean of respondent cases (using base weight) and the mean of all sample cases (using the base weight).<sup>3</sup> Relative bias is defined as the ratio of estimated bias to the weighted mean of the respondent cases.<sup>4</sup> Bias in the sample mean is estimated as the product of the base-weighted nonresponse rate and the difference between the mean of respondent cases (using base weight) and the mean of nonrespondent cases (using the base weight)<sup>5</sup> Bias in the sample mean is estimated as the difference between the mean of respondent cases (using the specified weight) and the mean of all sample cases (using the specified weight).

# Rounds to zero.

<sup>1</sup> Bias is significant at the 0.05 level.<sup>2</sup> Bias in the sample mean is estimated as the difference between the mean of respondent cases (using base weight) and the mean of all sample cases (using the base weight).<sup>3</sup> Relative bias is defined as the ratio of estimated bias to the weighted mean of the respondent cases.<sup>4</sup> Bias in the sample mean is estimated as the product of the base-weighted nonresponse rate and the difference between the mean of respondent cases (using base weight) and the mean of nonrespondent cases (using the base weight)<sup>5</sup> Bias in the sample mean is estimated as the difference between the mean of respondent cases (using the specified weight) and the mean of all sample cases (using the specified weight).

† Not applicable.

# Rounds to zero.

<sup>1</sup> Bias is significant at the 0.05 level.<sup>2</sup> Bias in the sample mean is estimated as the difference between the mean of respondent cases (using base weight) and the mean of all sample cases (using the base weight).<sup>3</sup> Relative bias is defined as the ratio of estimated bias to the weighted mean of the respondent cases.<sup>4</sup> Bias in the sample mean is estimated as the product of the base-weighted nonresponse rate and the difference between the mean of respondent cases (using base weight) and the mean of nonrespondent cases (using the base weight)<sup>5</sup> Bias in the sample mean is estimated as the difference between the mean of respondent cases (using the specified weight) and the mean of all sample cases (using the specified weight).
