

Variable name: STU_ID

Record #1, Position:1 - 5, Format: A5

Variable label: Student ID

Variable description:

- Student identifier assigned for all base year eligible students (including respondents, nonrespondents, and questionnaire incapable students). IDs randomly assigned from 10001 to 35206 across all students.

Code	Value Label	Frequency	Percentage
Alph	Alpha	23503	100.00
TOTALS		23503	100.00

Variable name: SCH_ID

Record #1, Position:6 - 9, Format: A4

Variable label: School ID

Variable description:

- School identifier assigned for the base year sample high school. IDs randomly assigned from 1001 to 1944 across all high schools.

Comment: Variable suppressed with -5 values on the public use file.

Code	Value Label	Frequency	Percentage
-5	Data suppressed	23503	100.00
TOTALS		23503	100.00

Variable name: X1NCESID

Record #1, Position:10 - 21, Format: A12

Variable label: X1 School identification number from CCD or PSS

Variable description:

- X1NCESID stores the 12-character NCES ID of the sample member's base year school (2009-2010 school year). The NCES ID is school identifier used to link to the Common Core of Data (CCD) file and the Private School Survey (PSS) file. The source of the NCES ID was the 2005-2006 CCD and 2005-2006 PSS.

Please note: CCD/PSS variables from the version used to draw the sample are provided, and not a version consistent with the base year data collection timeframe. Analysts can use X1NCESID to merge to any version of CCD or PSS to obtain information for a particular timeframe.

Comment: Variable suppressed with -5 values on the public use file.

Code	Value Label	Frequency	Percentage
-5	Data suppressed	23503	100.00
TOTALS		23503	100.00

Variable name: X2NCESID

Record #1, Position:22 - 33, Format: A12

Variable label: X2 School identification number from CCD or PSS

Variable description:

- X2NCESID stores the 12-character NCES ID of the sample member's current or last attended school (2011-2012 school year). Responding students with an enrollment status of transfer, early graduate, or dropout (X2ENROLSTAT=2,4,5) we are able to determine the school name for students that indicate their most recent school is not the base year school. Nonresponding students with an enrollment status of transfer (X2ENROLSTAT=2) could not be linked to their transfer school and are coded as -6. Nonresponding early graduates, dropouts, both unknown and out of scope (X2ENROLSTAT=4,5,6,7,8) default to the base year school. All students with an enrollment status of home school (X2ENROLSTAT=3) are not linked to a school and are coded as -6. The NCES ID is the school identifier used to link to the Common Core of Data (CCD) file and the Private School Survey (PSS) file. The source of the NCES ID was the 2011-2012 CCD and 2011-2012 PSS.

Please note: CCD/PSS information for schools is from the latest source (2011-2012) possible to closely align to when data collection occurred. This is different from base year CCD/PSS variables where the version used to draw the sample is provided, and not a version consistent with the base year data collection timeframe. Analysts can use X1NCESID and X2NCESID to merge to any version of CCD or PSS to obtain information for a particular timeframe.

Comment: Variable suppressed with -5 values on the public use file.

Variable name: X1PACISLE

Record #1, Position:265 - 266, Format: N2.

Variable label: X1 Student is Native Hawaiian/Pacific Islander-composite

Variable description:

- The sample member's race/ethnicity is characterized by a series of six dichotomous composite variables (the student is/is not white, the student is/is not black, etc.). The six dichotomous composite race/ethnicity variables are X1HISPANIC, X1WHITE, X1BLACK, X1ASIAN, X1PACISLE, and X1AMINDIAN. Each of these dichotomous composites is based on data from the student questionnaire; if missing from the student questionnaire, they are based on the presence of the race/ethnicity from the school-provided sampling roster; if still missing, they are based on the presence of the race/ethnicity from the parent questionnaire (if parent questionnaire data includes race/ethnicity information for biological parents); if still missing, they are based on the presence of another race/ethnicity on the school-provided sampling roster (to set values to "No").) . The six dichotomous race/ethnicity composites are then used in conjunction to produce the summary race/ethnicity composite X1RACE.

Comment: Variable suppressed with -5 values on the public use file.

Code	Value Label	Frequency	Percentage

Variable name: X1NATIVELANG

Record #1, Position:273 - 274, Format: N2.

Variable label: X1 Student's native language

Variable description:

- Indicates the language the sample member first learned to speak. X1NATIVELANG is taken from the base year student questionnaire, i.e. S1LANG1ST (whether sample member first learned to speak English, Spanish, and/or another language) and S1LANG1STOS (non-English language sample member first learned to speak); if missing in the base year student questionnaire, X1NATIVELANG is taken from the base year parent questionnaire, i.e. P1HOMELANG (whether a language other than English is spoken in the home) and P1RSPLANG (language parent respondent usually speaks to sample member). If missing from both sources, X1NATIVELANG is statistically imputed for base-year student survey respondents (imputed values in X1NATIVELANG can be identified using X1NATIVEL_IM). For sample members who first learned both English and a non-English language, X1NATIVELANG is coded with the applicable non-English language (see also X1DUALLANG).
Comment: Variable suppressed with -5 values on the public use file.

Variable name: X1TXMTH

Record #1, Position:283 - 289, Format: N7.4

Variable label: X1 Mathematics theta score

Variable description:

- The math theta score represents the student's ability level on a continuous scale. The theta score provides a norm-referenced measurement of achievement, that is, an estimate of achievement relative to the population (fall 2009 9th graders) as a whole. It provides information on status compared to peers (as distinguished from the IRT-estimated scale score which represents status with respect to achievement on a particular criterion set of test items). When the score is not available, X1TXMTH1-5 are created as the multiple imputation values for X1TXMTH. X1TXMTH is the mean of X1TXMTH1-5. The standard error of measurement for the theta score is X1TXMSEM. The standardized form of the mathematics theta score is X1TXMTSCOR. See Chapter 2 of the HSL:09 Base-Year Data File Documentation (NCES 2011-328) for more information on the derivation of the math theta score.

Variable name: X1TXMSEM

Record #1, Position:290 - 296, Format: N7.4

Variable label: X1 Mathematics standard error of measurement for raw theta score

Variable description:

- The standard error of measurement (SEM) for the theta score indicates the precision in the ability estimate. It is calculated from the sum of item information functions for each item answered by each student. Unlike the classical standard error of measurement, which is a constant, the IRT standard error varies across the scale-score continuum. It is typically smaller for students whose theta score falls toward the center of the distribution because more students answered the items with average difficulty. However, students whose theta scores fall at the extremes of the distribution tend to have a higher SEM because their scores are based on items answered by fewer students overall. When the score is not available, X1TXMSEM1-5 are created as the multiple imputation values for X1TXMSEM. X1TXMSEM is the mean of X1TXMSEM1-5. See Chapter 2 of the HSLs:09 Base-Year Data File Documentation (NCES 2011-328) for more information on the derivation of the math theta SEM.

Variable name: X1TXMSCR

Record #1, Position:297 - 303, Format: N7.4

Variable label: X1 Mathematics IRT-estimated number right score (of 72 base year items)

Variable description:

- The math IRT-estimated scale score is a criterion-referenced measure of achievement. The criterion is the set of skills defined by the HSLs:09 framework and represented by the 72 items in the HSLs:09 math item pool. The estimated scale score for math is an estimate of the number of items students would have answered correctly had they responded to all 72 items in the item pool. The ability estimates and item parameters derived from the IRT calibration can be used to calculate each student's probability of a correct answer for each of the items in the pool. These probabilities are summed to produce the IRT-estimated number-correct scale score. See Chapter 2 of the HSLs:09 Base-Year Data File Documentation (NCES 2011-328) for more information on the derivation of the math scale score.

Code	Value Label	Frequency	Percentage

Variable name: X1TXMTSCOR

Record #1, Position:304 - 310, Format: N7.4

Variable label: X1 Mathematics standardized theta score

Variable description:

- The math standardized T score provides a norm-referenced measurement of achievement, that is, an estimate of achievement relative to the population (fall 2009 9th graders) as a whole. It provides information on status compared to peers (as distinguished from the IRT-estimated percent-correct score which represents status with respect to achievement on a particular criterion set of test items). The standardized T score is a transformation of the IRT theta (ability) estimate, rescaled to a mean of 50 and standard deviation of 10. An advantage of the standardized score over the raw theta score is that it facilitates comparisons in standard deviation units. See Chapter 2 of the HSLs:09 Base-Year Data File Documentation (NCES 2011-328) for more information on the derivation of the math T score.

TOTALS		23503	100.00

Variable name: X1PAR1RACE

Record #1, Position:370 - 371, Format: N2.

Variable label: X1 Parent 1: race/ethnicity

Variable description:

- Characterizes the race/ethnicity of "parent #1", as reported by the parent questionnaire respondent; "parent #1" is the parent to whom all "parent #1" variables (e.g. X1P1RELATION, X1PAR1EMP, P1YRBORN1, P1USYR1, etc.) refer. X1PAR1RACE summarizes the following 6 dichotomous race/ethnicity variables drawn from the parent questionnaire: P1HISP1, P1WHITE1, P1BLACK1, P1ASIAN1, P1PACISLE1, and P1AMINDIAN1.

Comment: "Amer. Indian/Alaska Native, non-Hispanic" and "Native Hawaiian/Pacific Islander, non-Hispanic" recoded as "Other, non-Hispanic" on the public use file.

Code	Value Label	Frequency	Percentage
2	Asian, non-Hispanic	1239	5.27
3	Black/African-American, non-Hispanic	1564	6.65
4	Hispanic, no race specified	629	2.68
5	Hispanic, race specified	1517	6.45

-9	Missing	893	3.80
TOTALS		23503	100.00

Variable name: X1P2RELATION

Record #1, Position:372 - 373, Format: N2.

Variable label: X1 Parent 2: spouse's relationship to 9th grader

Variable description:

- Indicates the relationship of "parent #2" to the sample member; "parent #2" is the parent to whom all "parent #2" variables (e.g. X1P2RELATION, X1PAR2EMP, P1YRBORN2, P1USYR2, etc.) refer. Parent #2 is usually the spouse/partner of the respondent unless the respondent is not a parent or parent figure and there are two parents also living in the household. X1P2RELATION is taken from the base year parent questionnaire; if missing from the base year parent questionnaire, X1P2RELATION is statistically imputed for cases with a completed parent interview (imputed values in X1P2RELATION can be identified using X1P2RELAT_IM).

Comment: Non-partner guardian relationships recoded as other guardian on the public use file. ("Other guardian" includes foster parent, partner, grandparent, and other relative, as well as other guardian.)

TOTALS		23503	100.00

Variable name: X1PAR2RACE

Record #1, Position:390 - 391, Format: N2.

Variable label: X1 Parent 2: race/ethnicity

Variable description:

- Characterizes the race/ethnicity of "parent #2", as reported by the parent questionnaire respondent; "parent #2" is the parent to whom all "parent #2" variables (e.g., X1P2RELATION, X1PAR2EMP, P1YRBORN2, P1USYR2, etc.) refer. X1PAR2RACE summarizes the following 6 dichotomous race/ethnicity variables drawn from the parent questionnaire: P1HISP2, P1WHITE2, P1BLACK2, P1ASIAN2, P1PACISLE2, and P1AMINDIAN2.

Comment: "Amer. Indian/Alaska Native, non-Hispanic" and "Native Hawaiian/Pacific Islander, non-Hispanic" recoded as "Other, non-Hispanic" on the public use file.

Code	Value Label	Frequency	Percentage

TOTALS		23503	100.00

Variable name: X1PAREDU

Record #1, Position:392 - 393, Format: N2.

Variable label: X1 Parents'/guardians' highest level of education

Variable description:

- Indicates the highest level of education achieved by either parent living in the sample member's home. X1PAREDU is constructed from two composite variables (X1PAR1EDU and X1PAR2EDU) which contain imputed values; if either of these two input variables are imputed and the highest level of education could not be inferred from non-imputed data, then the imputation flag for X1PAREDU (X1PAREDU_IM) is set to 1.

Comment: "Educational Specialist diploma" recoded as "Master's degree" on the public use file.

Code	Value Label	Frequency	Percentage
1	Less than high school	1010	4.30

Variable name: X1PARPATTERN

Record #1, Position:394 - 395, Format: N2.

Variable label: X1 P1-P2 relationship pattern

Variable description:

- This variable indicates: (1) whether there are one or two parents in sample member's home, (2) the relationship of those parent(s) to the sample member, and (3) if there are two parents in the home, the relationship of those parents to each other. This variable was derived from two composite variables (X1P1RELATION and X1P2RELATION) which contain imputed values, as well as one parent questionnaire variable (P1HHTIME) which was imputed, when missing, for the purposes of constructing X1PARPATTERN (though the imputed values of P1HHTIME are not delivered).

Note: Combined "Bio/adoptive mother and non-partner guardian" with "Bio/adoptive mother and non-bio/adoptive partner" into "Bio/adoptive mother and other guardian" and combined "Bio/adoptive father and non-partner guardian" with "Bio/adoptive father and non-bio/adoptive partner" into "Bio/adoptive father and other guardian" on the public use file. ("Other guardian" includes stepparent, foster parent, partner, grandparent, and other relative, as well as other guardian.)

Comment: See the note at the end of the "Variable Description" for recoding information.

Code	Value Label	Frequency	Percentage
1	Two bio/adoptive parents	10156	43.21
2	Bio/adoptive mother and other guardian	2106	8.96

TOTALS		23503	100.00

Variable name: X1MOMRESP

Record #1, Position:396 - 397, Format: N2.

Variable label: X1 Whether parent questionnaire respondent is mother

Variable description:

- Indicates whether or not the parent questionnaire respondent is a biological, adoptive, or step mother.

X1MOMRESP is derived from three composite variables (X1P1RELATION, X1P2RELATION, and X1PARRESP).

Code	Value Label	Frequency	Percentage
0	Parent respondent is not bio/adoptive/step-mother	4401	18.73
1	Parent respondent is bio/adoptive/step-mother	12387	52.70
-8	Unit non-response	6715	28.57
TOTALS		23503	100.00

Variable name: X1MOMREL

Record #1, Position:398 - 399, Format: N2.

Variable label: X1 Mother/female guardian's relationship to 9th grader

Variable description:

- Indicates whether or not there is a biological, adoptive, or step mother in the sample member's household. X1MOMREL is derived from two composite variables (X1P1RELATION and X1P2RELATION) which contain imputed values; if either of these two input variables is imputed and the presence of a mother in the household could not be determined from unimputed data, then the imputation flag for X1MOMREL (X1MOMREL_IM) is set to 1.

Code	Value Label	Frequency	Percentage
0	No bio/adoptive/step-mother in household	1156	4.92
1	Biological mother in household	14757	62.79

TOTALS		23503	100.00

Variable name: X1DADRACE

Record #1, Position:438 - 439, Format: N2.

Variable label: X1 Father's race/ethnicity

Variable description:

- For sample members who have a biological, adoptive, or step father living in their household, X1DADRACE characterizes the race/ethnicity of that biological, adoptive, or step father. X1DADRACE is derived from four composite variables (X1P1RELATION, X1P2RELATION, X1PAR1RACE, and X1PAR2RACE).

Comment: "Amer. Indian/Alaska Native, non-Hispanic" and "Native Hawaiian/Pacific Islander, non-Hispanic" recoded as "Other, non-Hispanic" on the public use file.

Code	Value Label	Frequency	Percentage
0	No bio/adoptive/step-father in household	3721	15.83
2	Asian, non-Hispanic	1056	4.49
3	Black/African-American, non-Hispanic	960	4.08
4	Hispanic, no race specified	468	1.99
5	Hispanic, race specified	1146	4.88
6	More than one race, non-Hispanic	352	1.50
8	White, non-Hispanic	8359	35.57

TOTALS		23503	100.00

Variable name: X1HHNUMBER

Record #1, Position:440 - 441, Format: N2.

Variable label: X1 Number of 2009 household members

Variable description:

- Indicates the total number of people living in the sample member's household, as reported by the parent questionnaire respondent. X1HHNUMBER is the sum of P1HHLT18 (number of household members less than 18 years of age) and P1HHGE18 (number of household members 18 years or older), both of which are based on questions from the base year parent questionnaire which accepted only single-digit responses (i.e. the two input variables for this composite are essentially top-coded at 9). If either of these two input variables stores a value of 9, X1HHNUMBER will store a value (98 or 99) indicating that one or both of the input variables was top-coded; X1HHNUMBER values of 98 and 99 therefore refer to households where the exact number of household members can not be determined, but can be safely assumed to be 9 or greater. The two input variables for this composite were imputed for the purposes of constructing X1HHNUMBER (though the imputed values of P1HHLT18 and P1HHGE18 are not delivered). If either of these two inputs is imputed, then the imputation flag for X1HHNUMBER (X1HHNUMB_IM) is set to 1.

Comment: Households with more than 11 members or with inputs (p2hhl18 and p2hhge18) top coded at 9 are recoded as "11+ Household members" on the public use file.

Code	Value Label	Frequency	Percentage
2	2 Household members	851	3.62

Variable name: X1SES

Record #1, Position:450 - 456, Format: N7.4

Variable label: X1 Socio-economic status composite

Variable description:

- This composite variable is used to measure a construct for socioeconomic status. X1SES is calculated using parent/guardians' education (X1PAR1EDU and X1PAR2EDU), occupation (X1PAR1OCC2 and X1PAR2OCC2), and family income (X1FAMINCOME). For cases with nonresponding parent/guardians, 5 imputed values are generated (X1SES1-X1SES5), X1SES is computed as the average of the 5 imputed values, and the imputation flag is set as X1SES_IM=1 (values for parent/guardian education, occupation, and income are set to -8). When education, occupation, or family income are imputed using other information provided by the responding parent/guardian, X1SES is constructed from the combination of actual and imputed parent/guardian values. For these cases, the values of X1SES1-X1SES5 are equivalent to X1SES and X1SES_IM=2. Otherwise, the responding parent/guardian provided responses for all input variables so that the values of X1SES1-X1SES5 are again equivalent to X1SES and X1SES_IM=0. For more information on this variable, please refer to section 7.3.2.2 and appendix k of the HSL:09 Base-Year Data File Documentation (NCES 2011-328).

- This variable is a scale of the sample member's school engagement; higher values represent greater school engagement. Variable was created through principal factor components analysis (weighted by W1STUDENT) and standardized to a mean of 0 and standard deviation of 1. The inputs to this scale were S1NOHWDN, S1NOPAPER, S1NOBOOKS, and S1LATE. Only respondents who provided a full set of responses were assigned a scale value. The coefficient of reliability (alpha) for the scale is .65. For more information on this scale score, please see chapter 5 of the Base-Year Data File Documentation (NCES 2011-328).

Code	Value Label	Frequency	Percentage
C	-3.38 - 1.39	20902	88.93
-8	Unit non-response	2059	8.76
-9	Missing	542	2.31
TOTALS		23503	100.00

Variable name: X1STU30OCC2

Record #1, Position:518 - 519, Format: N2.

Variable label: X1 Student occupation at age 30: 2-digit ONET code

Variable description:

- X1STU30OCC2 stores the 2-digit Occupational Information Network (O*NET) code of the job the sample member expects or plans to have at age 30. The occupation text is stored in S1OCC30 and X1STU30OCC6 (6-digit code) and X1STU30OCC2 (2-digit code) are the coded versions of that occupation text. If an occupation cannot be coded to the 6-digit level but can be coded to the 2-digit level, the 2 digit code is also stored in X1STU30OCC6 with a value of "XX0000". See <http://www.onetcenter.org/> for further information on the O*NET taxonomy.

Comment: Occupations with low counts set to uncodeable on the public use file.

Variable name: X1TMLINK

Record #1, Position:584 - 585, Format: N2.

Variable label: X1 Student to math teacher link descriptor

Variable description:

- X1TMLINK characterizes the linkage between the student and the base-year math teacher associated with that student on the HSLs data file. The values assigned are a product of comparison between student-provided teacher information and the teacher information provided by the school. Values of 1 through 3 represent cases where the math teacher associated with the student is a respondent, with values of 1 representing the 'strongest' links (due to consistency between student- and school-provided information), and values of 2, and 3 representing links considered less strong due to inconsistent and/or missing information. Values of 8 are assigned in cases where a link could not be established between the student and a teacher because the teacher did not respond to the questionnaire. Values of 9 are assigned in cases where the student's school indicates the student is not enrolled in a math class and the student either indicates they are not enrolled in a math class or their class information is missing. For more information about teacher linkages, please refer to chapter 5 of the HSLs:09 Base-Year Data File Documentation (NCES 2011-328).

Code	Value Label	Frequency	Percentage
1	Teacher respondent, school and student-provided information consistent	13350	56.80
2	Teacher respondent, student-provided information selected	275	1.17
3	Teacher respondent, school-provided information selected	3445	14.66
8	Teacher nonrespondent	5466	23.26
9	Student not taking fall 2009 math course	967	4.11
TOTALS		23503	100.00

Variable name: X1TMCRSLINK

Record #1, Position:586 - 587, Format: N2.

Variable label: X1 Student to math teacher course-level link descriptor

Variable description:

- X1TMCRSLINK characterizes the linkage between the student and the course-level data provided by the math teacher associated with that student on the HSLs data file. Values of 1 are assigned in cases where X1TMLINK=1 and the student confirmed enrollment in the associated course and could be linked using school records data to a course reported in the teacher questionnaire. Values of 2 are assigned in cases where X1TMLINK=1 or 3 and the student did not confirm enrollment in the associated course but could be linked using school records data to a course reported in the teacher questionnaire. Values of 8 are assigned where X1TMLINK=1, 2, 3, or 8 and either the teacher did not provide any course-level information for the school-specified course associated with the given student or the teacher was a nonrespondent. Values of 9 are assigned where X1TMLINK=9. For more information about teacher course linkages, please refer to chapter 5 of the HSLs:09 Base-Year Data File Documentation (NCES 2011-328).

Code	Value Label	Frequency	Percentage
1	Teacher reported on school-provided course, student confirmed enrollment	8842	37.62
2	Teacher reported on school-provided course, student did not confirm enrollment	4524	19.25
8	No course level information linked to student	9170	39.02

Record #1, Position:658 - 659, Format: N2.

Variable label: X1 School control

Variable description:

- X1CONTROL identifies the sample member's base year school as being a Public, Catholic, or Other Private School, as indicated in the source data for sampling: the Common Core of Data (CCD) 2005-2006 and the Private School Survey (PSS) 2005-2006.

Please note: CCD/PSS variables from the version used to draw the sample are provided, and not a version consistent with the base year data collection timeframe. Analysts can use X1NCESID to merge to any version of CCD or PSS to obtain information for a particular timeframe.

Comment: Catholic and other private recoded as one category on the public use file.

Code	Value Label	Frequency	Percentage
1	Public	19273	82.00
2	Catholic or other private	4230	18.00
TOTALS		23503	100.00

Variable name: X1LOCALE

Record #1, Position:660 - 661, Format: N2.

Variable label: X1 School locale (urbanicity)

Variable description:

- X1LOCALE characterizes the locale (urbanicity) of the sample member's base year school as either City, Suburb, Town, or Rural, as indicated in the source data for sampling: the Common Core of Data (CCD) 2005-2006 and the Private School Survey (PSS) 2005-2006.

Please note: CCD/PSS variables from the version used to draw the sample are provided, and not a version consistent with the base year data collection timeframe. Analysts can use X1NCESID to merge to any version of CCD or PSS to obtain information for a particular timeframe.

Code	Value Label	Frequency	Percentage
1	City	6689	28.46
2	Suburb	8467	36.03
3	Town	2788	11.86
4	Rural	5559	23.65
TOTALS		23503	100.00

Variable name: X1REGION

Record #1, Position:662 - 663, Format: N2.

Variable label: X1 School geographic region

Variable description:

- X1REGION identifies the geographic region of the sample member's base year school, as indicated in the source data for sampling: the Common Core of Data (CCD) 2005-2006 and the Private School Survey (PSS) 2005-2006.

Please note: CCD/PSS variables from the version used to draw the sample are provided, and not a version consistent with the base year data collection timeframe. Analysts can use X1NCESID to merge to any version of CCD or PSS to obtain information for a particular timeframe.

Code	Value Label	Frequency	Percentage
1	Northeast	3662	15.58
2	Midwest	6224	26.48

Variable name: X1SCHOOLCLI

Record #1, Position:686 - 690, Format: N5.2

Variable label: X1 Scale of administrator's assessment of school climate

Variable description:

- This variable is a scale of the administrator's assessment of his/her school's climate. Higher values represent more positive assessments of the school's climate (i.e. fewer problems are indicated). Variable was created through principal components factor analysis (weighted by W1SCHOOL) and standardized to a mean of 0 and standard deviation of 1. The inputs to this scale were A1CONFLICT, A1ROBBERY, A1VANDALISM, A1DRUGUSE, A1ALCOHOL, A1DRUGSALE, A1WEAPONS, A1PHYSABUSE, A1TENSION, A1BULLY, A1VERBAL, A1MISBEHAVE, A1DISRESPECT, and A1GANG. Only respondents who provided a full set of responses were assigned a scale value. The coefficient of reliability (alpha) for the scale is .65. For more information, please see chapter 5 of the HSLs:09 Base-Year Data File Documentation (NCES 2011-328).

TOTALS		23503	100.00

Variable name: X2ENROLSTAT

Record #1, Position:724 - 725, Format: N2.

Variable label: X2 Student enrollment status

Variable description:

- Enrollment status for the spring term 2012. Indicates enrolled in BY school, enrolled in transfer school, dropout, graduated early or early GED, homeschooled, unknown, or out of scope. X2ENRSTATSCH differs from X2ENROLSTAT in that the school enrollment status was collected prior to the student interviews and the time between the school reported status and student reported status was such that the student status could have changed. Student nonrespondents only have school information to determine enrollment status and have X2ENROLSTAT=X2ENRSTATSCH. Dropouts are defined as those who have been out of school for a period of 4 weeks or more not including school breaks, illness, injury, or vacation. Students who left school and then returned are not considered dropouts, however that spell is captured in X2DROPSTAT and X2EVERDROP.

SAS Logic:

* Please note that the values for this composite were obtained from the case management system, and those data are not available on the ECB;

* One important piece of logic that applies to ECB variables is the following logic;

if x2sqstat>=7 then X2enrolstat=X2enrstatsch;

Comment: "Deceased" recoded as "Out of scope" on the public use file.

Code	Value Label	Frequency	Percentage
1	In base year school	18247	77.64
2	Transfer	3407	14.50
3	Home school	303	1.29

Variable name: X2RACE

Record #1, Position:734 - 735, Format: N2.

Variable label: X2 Student's race/ethnicity-composite

Variable description:

- X2RACE characterizes the sample member's race/ethnicity by summarizing the following six dichotomous race/ethnicity composites: X2HISPANIC, X2WHITE, X2BLACK, X2ASIAN, X2PACISLE, and X2AMINDIAN. Each of these dichotomous composites is pulled from the base year composite when not imputed, otherwise it is based on data from the F1 student questionnaire; if still missing, they are based on the presence of the race/ethnicity from the F1 parent questionnaire (if parent questionnaire data includes race/ethnicity information for biological parents). X2RACE is derived from the six dichotomous race/ethnicity variables listed above (though the imputed values of X2WHITE, X2BLACK, X2ASIAN, X2PACISLE, and X2AMINDIAN are not stored on the data file). If any of these input variables are imputed, then the imputation flag for X2RACE (X2RACE_IM) is set (1=imputed in BY, 2=imputed in F1).

SAS Logic:

```
array st_race X2WHITE X2BLACK X2ASIAN X2PACISLE X2AMINDIAN ;

- The math theta score represents the student's ability level on a continuous scale. The theta score provides a norm-referenced measurement of achievement, that is, an estimate of achievement relative to the population (fall 2009 9th graders) as a whole. It provides information on status compared to peers (as distinguished from the IRT-estimated scale score which represents status with respect to achievement on a particular criterion set of test items). When the score is not available, X2TXMTH1-5 are created as the multiple imputation values for X2TXMTH. X2TXMTH is the mean of X2TXMTH1-5. The standard error of measurement for the theta score is X2TXMSEM. The standardized form of the mathematics theta score is X2TXMTSCOR. See Chapter 2 of the HSLs:09 F1 Data File Documentation (NCES 2014-361) for more information on the derivation of the math theta score.

Variable name: X2TXMSEM

Record #1, Position:775 - 781, Format: N7.4

Variable label: X2 Mathematics standard error of measurement for raw theta score

Variable description:

- The standard error of measurement (SEM) for the theta score indicates the precision in the ability estimate. It is calculated from the sum of item information functions for each item answered by each student. Unlike the classical standard error of measurement, which is a constant, the IRT standard error varies across the scale-score continuum. It is typically smaller for students whose theta score falls toward the center of the distribution because more students answered the items with average difficulty. However, students whose theta scores fall at the extremes of the distribution tend to have a higher SEM because their scores are based on items answered by fewer students overall. When the score is not available, X2TXMSEM1-5 are created as the multiple imputation values for X2TXMSEM. X2TXMSEM is the mean of X2TXMSEM1-5. See Chapter 2 of the HSLs:09 F1 Data File Documentation (NCES 2014-361) for more information on the derivation of the math theta SEM.

Variable label: X2 Mathematics IRT-estimated number right score (of ## first follow-up items)

Variable description:

- The math IRT-estimated number correct is a criterion-referenced measure at the time of the First Follow-up assessment. The criterion is the set of skills defined by both the HSLs:09 Base Year and First Follow-up framework and represented by the 118 items used to score HSLs:09 First Follow-up math assessment. The estimated number correct for math is an estimate of the number of items students would have answered correctly had they responded to all 118 items in the item pool. The ability estimates (Thetas) from the First Follow-up and item parameters derived from the IRT calibration were used to calculate each student's probability of a correct answer for each of the items in the pool. These probabilities are summed to produce the IRT-estimated number-correct scale score. See Chapter 2 of the HSLs:09 F1 Data File Documentation (NCES 2014-361) for more information on the derivation of the math estimate number correct.

Code	Value Label	Frequency	Percentage

Variable name: X2P2RELATION

Record #1, Position:878 - 879, Format: N2.

Variable label: X2 Parent 2: spouse's relationship to sample member

Variable description:

- Indicates the relationship of the second parent to the sample member; that is, the parent to whom all "parent 2" variables (e.g. X2P2RELATION, X2PAR2EMP, P2YRBORN1, P2USYR1, etc.) refer. The spouse of parent 1 is typically parent 2 when parent 1's relationship is a biological/adoptive/step parent or there are no resident biological/adoptive/step parents, otherwise in one parent households parent 2 is the first resident parent, otherwise parent 2 is the other parental adult in the household.

X2P2RELATION is pulled from the first follow-up parent questionnaire, and if missing it is imputed from the base year parent questionnaire and the first follow-up student questionnaire. X2P2RELATION is statistically imputed for first follow-up student sample members when all sources of parent data are missing (imputed values in X2P2RELATION can be identified using X2P2RELAT_IM=2). Unit nonresponse for this composite is less than the set of F1 student nonrespondents (X2SQSTAT>7) due to inclusion of parent data for student nonrespondents and questionnaire incapables. The additional parent data are available for use with the W2PARENT weight.

SAS Logic:

Variable name: X2HHNUMBER

Record #1, Position:946 - 947, Format: N2.

Variable label: X2 Number of 2012 household members

Variable description:

- Indicates the total number of people living in the sample member's household, as reported by the parent questionnaire respondent. X2HHNUMBER is the sum of P2HHLT18 (number of household members less than 18 years of age) and P2HHGE18 (number of household members 18 years or older), both of which are based on questions from the base year parent questionnaire which accepted only single-digit responses (i.e. the two input variables for this composite are essentially top-coded at 9). If either of these two input variables stores a value of 9, X2HHNUMBER will store a value (98 or 99) indicating that one or both of the input variables was top-coded; X2HHNUMBER values of 98 and 99 therefore refer to households where the exact number of household members can not be determined, but can be safely assumed to be 9 or greater. The two input variables for this composite were imputed for the purposes of constructing X2HHNUMBER (though the imputed values of P2HHLT18 and P2HHGE18 are not delivered). If either of these two inputs is imputed, then the imputation flag for X2HHNUMBER (X2HHNUMB_IM) is set to 2.

SAS Logic:

if X2PQSTAT in (8,9) then X2HHNUMBER = -8 ;
 else if P2HHLT18 = 9 and P2HHGE18 = 9 then X2HHNUMBER = 99 ;
 else if P2HHLT18 = 9 or P2HHGE18 = 9 then X2HHNUMBER = 98 ;
 else if P2HHLT18 = -9 or P2HHGE18 = -9 then X2HHNUMBER = -9 ;
 else if P2HHLT18 ne -9 and P2HHGE18 ne -9 then X2HHNUMBER = P2HHLT18 + P2HHGE18;
 else X2HHNUMBER = -9 ;

Comment: Households with more than 11 members recoded as "11+ Household members" and 1 member as "2 or less" on the public use file.

Variable name: X2SES
Record #1, Position:956 - 962, Format: N7.4
Variable label: X2 Socio-economic status composite
Variable description:

- This composite variable is used to measure a construct for socioeconomic status. X2SES is calculated using parent/guardians' education (X2PAR1EDU and X2PAR2EDU), occupation (X2PAR1OCC2 and X2PAR2OCC2), and family income (X2FAMINCOME). For cases with nonresponding parent/guardians, 5 imputed values are generated (X2SES1-X2SES5), X2SES is computed as the average of the 5 imputed values, and the imputation flag is set as X2SES_IM=3 (values for parent/guardian education, occupation, and income are set to -8). When education, occupation, or family income are imputed using other information provided by the responding parent/guardian, X2SES is constructed from the combination of actual and imputed parent/guardian values. For these cases, the values of X2SES1-X2SES5 are equivalent to X2SES and X2SES_IM=2. Otherwise, the responding parent/guardian provided responses for all input variables so that the values of X2SES1-X2SES5 are again equivalent to X2SES and X2SES_IM=0. For more information on this variable, please refer to section 7.3.2.2 and appendix k of the HSLs:09 F1 Data File Documentation (NCES 2014-361).

Variable label: X3 4ENG+3SS+3SCI+3MATH (Flag)

Variable description:

- The coursetaking completion flags (as well as the new basics variable X3TNEWBASIC) are based on credit counts without regard to the level of courses completed (except, where applicable, for the condition that at least two credits in a single foreign language must be earned). Only credits accrued in 9th through 12th grade (or ungraded) are included. For a cross-subject coursetaking composite that takes into account the level of courses completed, see academic track/concentrator (X3TACADTRCK). Values indicate course taking patterns. Flag set when at least 4 standard credits earned in English, 3 standard credits earned in Social Studies, 3 standard credits earned in Science, and 3 standard credits earned in Math.

TOTALS		23503	100.00

Variable name: X3TACADTRCK
Record #1, Position:1914 - 1915, Format: N2.
Variable label: X3 Academic track/concentrator
Variable description:

- X3TACADTRCK takes into account both number of credits earned and specific levels attained for math, science, and social studies. Students are flagged as an academic concentrator if they earn at least four credits in English, three credits in math with one higher than algebra II, three credits in science with one higher than biology, three credits in social studies with one in U.S. or world history, and two in one foreign language. Only credits accrued in 9th through 12th grade (or ungraded) are included. Values indicate whether the sample member is on an academic track that includes at least 4 English credits, 3 math credits (including Algebra II), 3 science credits (including biology), 3 social studies credits (including US or World History), and 2 credits in a particular foreign language.

Code	Value Label	Frequency	Percentage

1	Yes	8087	34.41
-8	Unit non-response	1575	6.70
TOTALS		23503	100.00

Variable name: X3TOCCUCON
Record #1, Position:1916 - 1917, Format: N2.
Variable label: X3 Occupational concentrator
Variable description:

- Indicates whether the sample member has at least 3 credits in a particular occupational concentrator. An occupational concentrator is defined as courses where the T3SSCED code value begins with the same first two digits and the values range from 10-21.

Code	Value Label	Frequency	Percentage
0	No	18540	78.88
1	Yes	3388	14.42
-8	Unit non-response	1575	6.70
TOTALS		23503	100.00

Variable name: X3TNEWBASIC

Record #1, Position:1918 - 1919, Format: N2.

Variable label: X3 New basics requirements

Variable description:

- The new basics variable (X3TNEWBASIC) and similar composites (X3TCRSES1-5) are based on credit counts without regard to the level of courses completed (except for the condition that at least two credits in a single foreign language must be earned). Only credits accrued in 9th through 12th grade (or ungraded) are included. For a cross-subject coursetaking composite that takes into account the level of courses completed, see academic track/concentrator (X3TACADTRCK).

Values indicate whether the sample member is on:

- (1) a college-bound core curriculum that includes at least 4 English credits, 3 math credits, 3 science credits, 3 social studies credits, .5 computer science credits, and 2 credits in a particular foreign language;
- (2) a core curriculum that includes at least 4 English credits, 3 math credits, 3 science credits, 3 social studies credits, and .5 computer science credits;
- (3) a college bound core curriculum without computer sciences that includes at least 4 English credits, 3 math credits, 3 science credits, 3 social studies credits, and 2 credits in a particular foreign language;
- (4) a core curriculum without computer sciences track that includes at least 4 English credits, 3 math credits, 3 science credits, and 3 social studies credits;
- (5) a minimal core curriculum that includes at least 4 English credits, 2 math credits, 2 science credits, and 3 social studies credits; or
- (6) all other patterns.

Code	Value Label	Frequency	Percentage

Variable label: S1 D05A 9th grader is taking fall 2009 science b/c he/she really enjoys science

Variable description:

- Why are you taking [fall 2009 science course]?

[If late December or later add:

(If you are no longer taking this course, think back to the fall when you answer this question and the questions that follow.)]

(Check all that apply.)

You really enjoy science

You like to be challenged

You had no choice, it is a school requirement

The school counselor suggested you take it

Your parent(s) encouraged you to take it

A teacher encouraged you to take it

There were no other science courses offered

You will need it to get into college

You will need it to succeed in college

You will need it for your career

It was assigned to you

Some other reason

You don't know why you are taking this course

Note: Question wording was customized such that the specific science type indicated by each respondent was displayed in place of "fall 2009 science course"; if the respondent indicated taking more than one science course during fall 2009, then "fall 2009 science course" was filled in the following order of precedence, as applicable: "Advanced Physics", "Advanced Chemistry", "Advanced Biology", "Anatomy or Physiology", "Environmental Science", "Integrated Science II or above", "Integrated Science I", "Principles of Technology", "Physics I", "Chemistry I", "Biology I", "a biological sciences course", "Earth Science", "an earth or environmental science course", "Life Science", "Physical Science", "a physical science course", "General Science", "this science course", "a science course".

Variable label: S2 D01 Teenager's favorite school subject

Variable description:

- Not including lunch or study periods, what [is/was] your favorite school subject?

1=English

2=Foreign language

3=Science

4=Art

5=Music

6=Mathematics

7=Physical education or gym

8=Religion

9=Health education

10=Computer science

11=Social studies, history, government, or civics

12=Career preparation class such as health professions, business, or culinary arts

13=Other subject

Note: Question wording was customized so that "is" displayed if the respondent indicated they were currently attending high school, otherwise "was" displayed.

Administered To: All respondents.

Crossround Note: This variable is a repeat of the BY variable S1FAVSUBJ.

Code	Value Label	Frequency	Percentage

Variable name: S2SOMECLG

Record #1, Position:5126 - 5127, Format: N2.

Variable label: S2 E07B Regardless of grades, will get into some kind of school/college

Variable description:

- How much do you agree or disagree with the following statements?

Regardless of your grades, you will be able to get into some kind of school or college.

1=Strongly agree

2=Agree

3=Disagree

4=Strongly disagree

Note: So as to more evenly distribute item non-response resulting from an inability to complete the student questionnaire within the allotted time, the survey instrument rotated the order in which certain sections of the student questionnaire were administered. Respondents assigned to Rotation group 1 (Y_SGRP=1) were administered the questionnaire sections in the following order: A, B, C, D, E, F, G. Respondents assigned to Rotation group 2 (Y_SGRP=2) were administered the questionnaire sections in the following order: A, B, C, F, D, E, G.

Administered To: All respondents

Variable name: P1JOBEVER1

Record #1, Position:6494 - 6495, Format: N2.

Variable label: P1 C06 Parent 1 has ever held a job

Variable description:

- [Have you/Has parent #1] ever held a regular job for pay or income?

Yes

No

Notes: Question wording was customized in the survey instrument based on whether parent #1 was the respondent or some other parent/guardian.

This item was not administered to respondents who indicated that parent #1 was currently working, but was logically imputed to 1 for such cases (i.e. when P1JOBNOW1=1).

This item was not included in the PAPI questionnaire, but was logically imputed to 1 when the PAPI respondent provided a job title and/or duties for parent #1.

Code	Value Label	Frequency	Percentage

Variable name: P2HIDEG1

Record #1, Position:8035 - 8036, Format: N2.

Variable label: P2 D01 Parent 1's highest degree earned

Variable description:

- In [Month and Year of base year interview], you indicated you had completed [parent 1's highest degree in base year]. Since that time, have you completed a higher level of education beyond [parent 1's highest degree in base year]?

OR

In [Month and Year of base year interview], you indicated you had not completed high school. Since that time, have you completed high school or a higher level of education beyond high school?

OR

What is the highest level of education [you/parent 1] [have/has] completed?

0=No, [you/parent 1] [have/has] not completed any other degree

1=Less than high school completion

2=Completed a high school diploma, GED, or alternative high school credential

3=Completed a certificate or diploma from a school that provides occupational training

4=Completed an Associate's degree

5=Completed a Bachelor's degree

6=Completed a Master's degree

7=Completed a Ph.D., M.D., law degree, or other high level professional degree

Note: The first version of the question was displayed if the first follow-up respondent was the same as the base year respondent and he/she had completed high school or a higher level of education in the base year. The second version of the question was displayed if the first follow-up respondent was the same as the base year respondent and he/she had not completed high school in the base year. The third version of the question was displayed under 3 conditions: 1) if a parent questionnaire was not completed in the base year, 2) if the first follow-up respondent was not identified as the same person as the base year respondent, or 3) if the respondents were the same but the highest level of education was not collected in the base year. The conditional language in brackets (you/parent 1) depended on whether parent 1 was the respondent or another parent or guardian in the household. See the Data File Documentation appendix E for a definition of parent 1. If the education level for parent 1 was provided in base year, the lower level education options were not displayed. Item(s) included in the abbreviated paper and pencil questionnaire.

Administered To: Base year questionnaire non-respondents; first follow-up respondents who are not the same as the base year respondent; first follow-up respondents who were also base year respondents and reported a highest level of education in the base year less than a PhD, MD, law degree or other high level professional degree; first follow-up respondents who were also base year respondents and did not report their highest level of education in the base year

Programming Note: Values have been filled with the response from the base year parent interview when parent 1 is the same and the parent has not completed a higher degree than in the base year. Because the response options do not entirely line up from base year to first follow-up, codes were mapped as 1 to 1, 2 to 2, 3 to 4, 4 to 5, 5 to 6, 6 to 6, and 7 to 7.

Crossround Note: This variable is a repeat of the BY variable P1HIDEG1.

Code	Value Label	Frequency	Percentage
1	Less than high school completion	714	3.04
2	Completed HS diploma/GED/alternative HS credential	2859	12.16
3	Completed certificate/diploma from school providing occupational training	496	2.11
4	Completed Associate's degree	1227	5.22
5	Completed Bachelor's degree	1964	8.36
6	Completed Master's degree	823	3.50

- [What is/In [your/her/his] most recent job, what was] [your/her/his] job title? If [you/he/she] [have/has/had] more than one job, describe the one at which [you/he/she] [work/works/worked] the most hours. What [do/does/did] [you/he/she] actually do in that job? That is, what [are/were] [your/her/his] main activities or duties?

Note: Question wording was customized in the survey instrument such that the language in brackets depended on whether the parent 1 was the respondent or another parent or guardian in the household and parent 1's current job status. See the Data File Documentation section 2.2.2 for a definition of parent 1. If parent 1 was currently holding a job, the question asked about that job; otherwise, the question asked about parent 1's most recent job. Item(s) included in the abbreviated paper and pencil questionnaire.

Administered To: All respondents except those who have never held a job for pay and those who are the same as the base year respondent and hold the same job as reported in the base year

Programming Note: Values have been filled with the response from the base year parent interview when parent 1 is the same and they indicate having the same job.

Crossround Note: This variable is a repeat of the BY variable P1JOBVDV1.

Variable name: P2HIDEG2

Record #1, Position:8670 - 8671, Format: N2.

Variable label: P2 D09 Parent 2's highest degree earned

Variable description:

- In [Month and Year of base year interview] you indicated [your spouse/your partner/parent 2] had completed [parent 2's highest degree in base year]. Since that time, has [he/she] completed a higher level of education beyond [parent 2's highest degree in base year]?

OR

In [Month and Year of base year interview] you indicated [your spouse/your partner/parent 2] had not completed high school. Since that time, has [he/she] completed high school or a higher level of education beyond high school?

OR

What is the highest level of education [your spouse/your partner/parent 2] has completed?

0=No, [your spouse/your partner/parent 2] has not completed any other degree

1=Less than high school completion

2=Completed a high school diploma, GED, or alternative high school credential

3=Completed a certificate or diploma from a school that provides occupational training

4=Completed an Associate's degree

5=Completed a Bachelor's degree

6=Completed a Master's degree

7=Completed a Ph.D., M.D., law degree, or other high level professional degree

Note: The first version of the question was displayed if the first follow-up parent 2 was the same as the base year parent 2 and he/she had completed high school or a higher level of education in the base year. The second version of the question was displayed if the first follow-up parent 2 was the same as the base year parent 2 and he/she had not completed high school in the base year. The third version of the question was displayed under 3 conditions: 1) if a parent questionnaire was not completed in the base year, 2) if the first follow-up parent 2 was not identified as the same as the base year parent 2, or 3) if the parent 2s were the same but the highest level of education was not collected in the base year. The conditional language in brackets (your spouse/your partner/parent 2) depended on whether parent 2 was the respondent's spouse or partner or another parent or guardian in the household. See the Data File Documentation appendix E for a definition of parent 2. If the education level for parent 2 was provided in base year, the lower level education options were not displayed. Item(s) included in the abbreviated paper and pencil questionnaire.

Administered To: Base year questionnaire non-respondents with a parent 2; first follow-up respondents who are not the same as the base year respondent and have a parent 2; first follow-up respondents who were also base year respondents, who have a parent 2 who is not the same as the base year parent 2; first follow-up respondents who were also base year respondents, whose parent 2 is the same as the base year parent 2 and reported a highest level of education for parent 2 in the base year less than a PhD, MD, law degree or other high level professional degree.

Programming Note: Values have been filled with the response from the base year parent interview when parent 2 is the same and the parent has not completed a higher degree than in the base year. Because the response options do not entirely line up from base year to first follow-up, codes were mapped as 1

to 1, 2 to 2, 3 to 4, 4 to 5, 5 to 6, 6 to 6, and 7 to 7.

Crossround Note: This variable is a repeat of the BY variable P1HIDEG2.

Code	Value Label	Frequency	Percentage

Variable name: P2HIMAJ62

Record #1, Position:8874 - 8880, Format: A7

Variable label: P2 D10C Parent 2's major for highest level of education 6-digit CIP code

Variable description:

- What was the major field of study for [his/her/parent 2's] [parent 2's highest degree in first follow-up]?

Note: Question wording was customized in the survey instrument such that the language in brackets (his/her/parent 2) depended on whether the parent 2 was the respondent's spouse or partner or another parent or guardian in the household. See the Data File Documentation appendix E for a definition of parent 2.

Administered To: [0]All respondents with a parent 2 who has completed a postsecondary degree for which a major field of study was not reported in the base year.

Programming Note: Values have been filled with the response from the base year parent interview when parent 2 is the same and the parent has not completed a higher degree than in the base year.

Crossround Note: This variable is a repeat of the BY variable P1HIMAJ62.

Comment: Variable suppressed with -5 values on the public use file.

TOTALS		23503	100.00

Variable name: P2STARTDEG2

Record #1, Position:8883 - 8884, Format: N2.

Variable label: P2 D11 Parent 2 has started but not completed more advanced degree

Variable description:

- Has [your spouse/your partner/parent 2] started, but not completed, any work on a degree beyond [a/an] [parent 2's highest degree in first follow-up]?

(If [he/she] has started more than one of the degrees listed below, please select the higher degree.)

1=No, [he/she] has not started any other degree

2=Yes, a certificate or diploma from a school that provides occupational training

3=Yes, an Associate's degree

4=Yes, a Bachelor's degree

5=Yes, a Master's degree

6=Yes, a Ph.D., M.D., law degree, or other high level professional degree

Note: Question/response wording was customized in the survey instrument such that the language in brackets (your spouse/your partner/parent 2) depended on whether the parent 2 was the respondent's spouse or partner or another parent or guardian in the household. See the Data File Documentation appendix E for a definition of parent 2. If the respondent was the same as the base year respondent and parent 2 was the same as the base year parent 2, and parent 2 had not completed any other degree, the highest level of education reported in the base year was displayed in place of "parent 2's highest degree in first follow-up." Otherwise, the highest level of education reported in P2HIDEG2 was displayed. Only response options representing levels of education higher than the highest degree in the first follow-up were displayed.

Administered To: Respondents with a parent 2 who had not completed a PhD, MD, law degree or other high level professional degree

Programming Note: Values have been filled with the response from the base year parent interview when parent 2 is the same and the parent has not started a higher degree than in the base year. Because the response options do not entirely line up from base year to first follow-up, codes were mapped as 1 to 1, 2 to 3, 3 to 4, 4 to 5, 5 to 5, 6 to 6.

Crossround Note: This variable is a repeat of the BY variable P1STARTDEG2.

Code	Value Label	Frequency	Percentage

Variable name: P2SAMEJOB2

Record #1, Position:8889 - 8890, Format: N2.

Variable label: P2 D14 Parent 2 has same occupation as in base year

Variable description:

- In [Month and Year of base year interview] you indicated that [your spouse's/your partner's/parent 2's] job title was: [parent 2's job title in base year]. Is that [his/her/parent 2's] [current/most recent] occupation?

1=Yes

0=No

Note: Question wording was customized in the survey instrument such that the language in brackets (your spouse/your partner/parent 2) depended on whether the parent 2 was the respondent's spouse or partner or another parent or guardian in the household. See the Data File Documentation appendix E for a definition of parent 2. Current was displayed in place of "current/most recent" if parent 2 was currently holding a job; otherwise, most recent was displayed.

Administered To: Respondents who are the same as the base year respondent, who have a parent 2 who is the same as the base year parent 2, and who provided an occupation for parent 2 in the base year

Programming Note: This variable was added to support the consistency of job information being carried forward from the BY where parent 2 is the same. This variable is not to be used for analysis by itself as it does not apply to parents new to the first follow-up.

Code	Value Label	Frequency	Percentage

Variable name: P2HOURS2

Record #1, Position:9303 - 9304, Format: N2.

Variable label: P2 D16 Hours Parent 2 works/worked per week

Variable description:

- About how many total hours per week [does/did] [he/she/parent 2] usually work for pay, counting all jobs?

hours per week

Note: Question wording was customized in the survey instrument such that the language in brackets depended on whether the parent 2 was the respondent's spouse or partner or another parent or guardian in the household and parent 2's current job status. See the Data File Documentation appendix E for a definition of parent 2. If parent 2 was currently holding a job, the question asked about that job; otherwise, the question asked about parent 2's most recent job.

Administered To: Respondents with a parent 2 who was currently holding a job or had ever held a job

Crossround Note: This variable is a repeat of the BY variable P1HOURS2.

Comment: Sparse values recoded to similar values on the public use file.
